Onsite operations consist of general residential activities. In addition to the current structures, the subject property is improved with a small garage building utilized for storage, concrete-paved and gravel driveways, concrete-paved walkways, two large backyard spaces, and associated landscaping.

According to available historical sources, the subject property was formerly developed with residence located on southwest side of the subject property as early as 1889. The current residences were constructed between 1916 and 1920, with north addition to 1271 East Julian Street building in 1978.

Tenants on the subject property have included residential occupants (1889-Present), and A&C Roofing (1987-1996).

The adjoining properties are tabulated below:

Adjoining Properties

- Northeast:** Single-family residences (321, 325, 329 and 335 Wooster Avenue) and apartment buildings (540 Bonita Avenue and 1299 East Julian Avenue)
- Southeast:** East Julian Street beyond which is La Estrella Market (1304-1308 East Julian Street), Mighty Studios (1272 East Julian Street), and Il Pastaio Foods (1266 East Julian Street)

According to a previous subsurface investigation conducted on a nearby property (1256 East Julian Avenue and Case # T0608515327), the depth of groundwater in the vicinity of the subject property is inferred to be approximately between 15.29 and 17.61 feet below ground surface (bgs) and groundwater flow inferred to be toward the northwest.

Findings and Opinions

Recognized Environmental Condition

A *recognized environmental condition (REC)* refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any RECs during the course of this assessment.

Controlled Recognized Environmental Condition

A *controlled recognized environmental condition (CREC)* refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment:

- Partner did not identify any CRECs during the course of this assessment.

Historical Recognized Environmental Condition

A *historical recognized environmental condition (HREC)* refers to a previous release of hazardous substances or petroleum products affecting the that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment:

- Partner did not identify any HRECs during the course of this assessment.

Business Environmental Risk

A *Business Environmental Risk (BER)* is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that asbestos-containing material (ACM) and/or lead-based paint (LBP) are present. Readily visible suspect ACMs and painted surfaces were observed in good condition. Should these materials be replaced, the identified suspect ACMs and LBPs would need to be sampled to confirm the presence or absence of asbestos or lead prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

Significant Data Gaps

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 and E1527-21 of 1271-1279 East Julian Avenue in San Jose, Santa Clara County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs, CRECs, or HRECs in connection with the subject property; however, a BER was identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and E1527-21 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 1271-1279 East Julian Avenue in San Jose, Santa Clara County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13 and E1527-21) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with and to the extent necessary to achieve the goal of the requirements set forth in the ASTM Standard E1527-13 and E1527-21. This assessment included: 1) a property and adjoining site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments to obtain readily ascertainable information to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched readily available information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-21, AULs include both legal (that is, institutional) and physical (that is, engineering) controls that may include legal

or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, or surface water on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the compliance and safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Yi's First Seed LLC engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Yi's First Seed LLC. Either verbally

or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13 and E1527-21.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of the AAI User Questionnaire from the Report User. This information was not provided at the time of the assessment. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner submitted Freedom of Information Act (FOIA) requests to San Jose Fire Department for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjoining properties. As of this writing, this agency has not responded to Partner's request. Based on information obtained from other historical resources, this limitation is not expected to alter the overall findings of this assessment.
- Partner observed approximately 50% of all interior units and all common areas. Based on the size and nature of use of the unobserved units (residential), this limited method of survey is not expected to alter the overall findings of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 1271-1279 East Julian Avenue in San Jose, California is located on the northwest side of East Julian Avenue and approximately 130 feet southwest of East Julian Avenue and Wooster Avenue intersection. According to the Santa Clara County Assessor, the subject property is identified by parcel numbers 249-66-009 and 249-66-010. According to online research, ownership is currently vested in Yi's First Seed LLC since 2019.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is developed with three single-story, residential buildings currently occupied by residential tenants for residential use. Onsite operations consist of general residential activities. In addition to the current structures, the subject property is improved with a small garage building utilized for storage, concrete-paved and gravel driveways, concrete-paved walkways, two large backyard spaces, and associated landscaping.

The subject property is designated for residential development by the City of San Jose.

The subject property was identified as an Emergency Response Notification System (ERNS) and California Hazardous Material Incident Report System (CHMIRS) site in the regulatory database report, as further discussed in Section 4.2.

2.3 Current Use of Adjoining Properties

The subject property is located within a mixed commercial and residential area of Santa Clara County. During the vicinity reconnaissance, Partner observed the land uses on adjoining properties as defined in ASTM E1527-13 and E1527-21 as any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them. The adjoining properties are tabulated below:

Adjoining Properties

Northeast: Single-family residences (321, 325, 329 and 335 Wooster Avenue) and apartment buildings (540 Bonita Avenue and 1299 East Julian Avenue)

Southeast: East Julian Street beyond which is La Estrella Market (1304-1308 East Julian Street), Mighty Studios (1272 East Julian Street), and Il Pastaio Foods (1266 East Julian Street)

Southwest: Apartment buildings (1203-1239 and 1204-1256 Permata Court)

Northwest: Green Villa Apartments (1298 Tripp Avenue)

The adjoining properties to the northeast, southeast and northwest were identified as a Hazardous Waste Manifest Data (HAZNET) sites in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The 2021 United States Geological Survey (USGS) *San Jose East, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 91 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the northwest.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

While under natural and undisturbed conditions shallow groundwater flow most frequently follows the topography of the land surface, natural or man-made features can affect flow direction, and the presumed flow may not match the actual flow directions at the subject property and vicinity. Topographic map interpretation indicates the direction of groundwater flow in the vicinity of the subject property is inferred to be toward the northwest.

According to a previous subsurface investigation conducted on a nearby property (1256 East Julian Avenue and Case # T0608515327), the depth of groundwater in the vicinity of the subject property is inferred to be approximately between 15.29 and 17.61 feet below ground surface (bgs).

The nearest surface water to the subject property is the Lower Silver Creek located approximately 866 feet northwest of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the San José Municipal Water System serves the subject property vicinity. Shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for San Jose are purchased blend of Hetch Hetchy water and treated water from the San Francisco Public Utilities Commission (SFPUC). The major water source originates from spring snowmelt flowing down the Tuolumne River to the Hetch Hetchy Reservoir.

2.4.3 Geology/Soils

Based on information obtained from the United States Department of Agriculture (USDA) Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Urban land-Still complex. The Still series consists of deep, well drained soils that formed in alluvial material from sedimentary rocks. Still soils are on flood plains and alluvial fans and have slopes of 0 to 30 percent. The mean annual precipitation is about 18 inches and the mean annual air temperature is about 60 degrees F. Urban land is a ground surface covered by pavement, concrete, buildings, and other structures underlain by wet disturbed and natural soils material (wet substratum). The soil profile is typically disturbed and does not resemble any mapped soil unit due to anthropogenic modification of the profile.

The subject property is situated within the Santa Clara Valley, which is an intermontane basin in the coastal region of the State of California. The rocks that underlie the basins and form the surrounding mountains are primarily marine sediments and metamorphic and igneous rocks, all of which are Mesozoic

age but locally include rocks of the Cenozoic age. The Property is located at approximately 85 feet above mean sea level. The estimated depth to bedrock at the Property is approximately 1,200 to 1,300 feet below the ground surface.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06085C0251J, dated February 19, 2014, the majority of the subject property appears to be located in Zone B, X (shaded); defined as moderate risk areas within the 0.2-percent-annual-chance floodplain, areas of 1-percent-annual-chance flooding where average depths are less than 1 foot, areas of 1-percent-annual-chance flooding where the contributing drainage area is less than 1 square mile, and areas protected from the 1-percent-annual-chance flood by a levee. Small southwest portion of the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

A copy of the reviewed flood map is included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information

4.2 Mapped Database Records Search

The regulatory database report provided by Environmental Risk Information Services (ERIS) documents the listing of sites identified on federal, state, county, city, and tribal (when applicable) standard source environmental databases within the approximate minimum search distance (AMSD) specified by ASTM E1527-13 and E1527-21. The data from these sources are updated as these data are released and integrated into one database. The information contained in this report was compiled from publicly available sources.

The environmental database information is used to identify environmental concerns in connection with the subject property. The listings also serve to identify the known indications of the storage, use, generation, disposal, or release of hazardous substance at the subject property and the potential for contaminants to migrate onto the subject property from off-site sources in groundwater or soil in the form of liquids or vapor.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

The following table lists the number of sites as categorized by the regulatory database within the prescribed AMSD. The locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

The incident was reported on January 27, 2020, under NRC Report No: 1269685. No other information was available for review. However, based on regulatory oversight and absence of any other listing suggesting the extent of release it appears that the release was in fact minor, as such is not expected to represent significant environmental concern.

The adjoining properties to the northeast, southeast and northwest are identified as a HAZNET site in the regulatory database report, as discussed below:

- The property, identified as Del Mutolo & Ruiz Property Management at 329 Wooster Avenue, is located adjoining to the northeast of the subject property. According to database, the site was issued EPA ID: CAC002648082 on November 9, 2009, for the hydrocarbon solvents, unspecified solvent mixture, waste oil and mixed oil and other organic solids off-site disposal in 2009. This EPA ID was inactivated on May 9, 2010. Based on current regulatory status, absence of reported spills and/or releases of hazardous substances and absence of violations, this listing is not expected to represent significant environmental concern.
- The property, identified as East Valley Animal Clinic at 1272 East Julian Avenue, is located adjoining to the southeast of the subject property. According to database, the site was issued EPA ID: CAL000113807 on August 24, 1993, which was inactivated on June 30, 1996. No manifest data are related with this listing. Based on current regulatory status, absence of reported spills and/or releases of hazardous substances and absence of violations, this listing is not expected to represent significant environmental concern.

This EPA ID was inactivated on March 4, 2013. Based on current regulatory status, absence of reported spills and/or releases of hazardous substances and absence of violations, this listing is not expected to represent significant environmental concern

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Surrounding Area Listings of Concern to Subject Property

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of San Jose services the subject property vicinity. No wastewater treatment facilities or septic systems were observed or reported on the subject property.

6.1.3 Stormwater and Surface Water Drainage

Stormwater is removed from the subject property primarily by ground infiltration through gravel driveways and landscaped areas and sheet flow action across the paved surfaces towards stormwater drains located in the public right of way.

6.1.4 Source of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity and natural gas provided by Pacific Gas and Electric (PG&E). The mechanical system is comprised of a split system with a central unit and interior air-handler and an exterior condenser. Hot water is provided by individual natural gas/electric hot water heaters.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Subject Property

Partner identified hazardous substances used, stored, and/or generated on the subject property as noted in the following table:

Hazardous Substances and/or Petroleum Products Noted Onsite						
Substance	Container Type	Quantity/Size	Location	Nature of Use	Secondary Containment	Environmental Concern
Paints and other maintenance chemicals	Plastic Containers	Various small to 1- and 5-gallon containers	Exterior unpaved area of 1279 East Julian Avenue	Off-site use	N	N

According to the site contact, Ms. Sandra Ceja, one of the residential tenants at 1279 East Julian Avenue works as a contractor. Various small to 1-gallon and 5-gallon containers of paints, maintenance chemicals and associated equipment are reportedly used off-site for contracting work and were observed to be stored on an unpaved area of the 1279 East Julian Avenue property. In addition, small quantities of general maintenance supplies and cleaning supplies were found throughout the subject property building interiors. These materials were observed to be properly labeled and stored at the time of the assessment with no signs of leaks, stains, or spills. Based on the nature of use, and overall small quantities observed, these materials are not expected to represent a significant environmental concern.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)-Containing Items

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent, or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps, and Clarifiers

No drains, sumps, or clarifiers, other than those associated with stormwater removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds, and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-Scope ASTM Considerations

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were constructed between 1916 and 1920, with addition in 1978. A limited, visual evaluation of accessible areas for the presence of suspect ACMs at the subject property was conducted. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACMs:

Suspect ACMs

Suspect ACM	Location	Friable Yes/No	Physical Condition
Drywall Systems	Throughout Building Interior	No	Good
Floor and Wall Tiles	Throughout Building Interior	No	Good
Floor and Wall Tile Mastic	Throughout Building Interior	No	Good
Stucco	Throughout Building Exterior	Yes	Good

Based on this building's date of construction, prior to disturbance, Partner recommends a comprehensive asbestos survey of the property be completed to determine the presence, condition, friability and likely future condition of suspect or confirmed ACM. All suspect materials must be handled as ACM according to local, state and federal regulations until the results of sampling and analysis indicate the material is a

non-ACM. According to the US EPA, ACM that is intact and in good condition can, in general, be managed safely in-place under an Operations and Maintenance (O&M) Program until removal is dictated by renovation, demolition, or deteriorating material condition.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm² (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Based on the age of the subject property buildings (pre-1978), there is a potential that LBP is present. Interior and exterior painted surfaces were observed in good condition and therefore not expected to represent a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the San José Municipal Water System serves the subject property vicinity. Shallow groundwater beneath the subject property is not utilized for domestic purposes. The sources of public water for San Jose are purchased blend of Hetch Hetchy water and treated water from the San Francisco Public Utilities Commission (SFPUC). The major

water source originates from spring snowmelt flowing down the Tuolumne River to the Hetch Hetchy Reservoir. According to the City of San Jose and the 2020 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g., in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property buildings for significant evidence of mold growth with the exceptions detailed in Section 1.5 of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.3.6 Wetlands

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property.

6.4 Adjoining Property Reconnaissance

The adjoining property reconnaissance consisted of observing the adjoining properties from the subject property premises. No items of environmental concern were identified on the adjoining properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 VAPOR ENCROACHMENT CONDITIONS

Partner conducted a limited non-intrusive vapor screening on the subject property to identify, to the extent feasible, the potential for vapor encroachment conditions (VECs) in connection with the subject property. This included consideration of chemicals of concern (COC) that may migrate as vapors into the subsurface of the subject property as a result of contaminated soil and groundwater on or near the property.

This screening utilized readily available data sources previously discussed in this Phase I ESA that includes:

- the physical setting of the subject property (Section 2.4),
- standard historical sources for the subject property, adjoining, and surrounding area (Section 3.0),
- known or potentially contaminated sites as identified from information from regulatory agencies and sites on Federal, State, tribal and local databases (Section 4.0), and
- information from the site reconnaissance (Section 6.0) of the subject property and observations of the surrounding properties.

The results of our data collection, reconnaissance, and analysis are tabulated below:

<i>Potential for Vapor Encroachment to Impact the Subject Property</i>	
Area of Concern	Likely or Known VEC to Subject Property
Subject Property Existing Operations or Conditions	None identified that impact the subject property.
Historical Uses of the Subject Property	None identified that impact the subject property.
Adjoining Property Operations or Existing Conditions	None identified that impact the subject property.
Historical Uses of Adjoining Properties or Nearby Properties	None identified that impact the subject property.
Regulatory Review of sites identified on Federal, State, tribal and Local Environmental Databases which were located in the AMSD	None identified that impact the subject property.

Based on the findings of the limited non-intrusive vapor screening, vapor intrusion is unlikely to be an issue of concern in connection with the existing structures on the subject property. As such, no further assessment is recommended.

8.0 FINDINGS AND CONCLUSIONS

Findings and Opinions

Recognized Environmental Condition

A *recognized environmental condition (REC)* refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any RECs during the course of this assessment.

Controlled Recognized Environmental Condition

A *controlled recognized environmental condition (CREC)* refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment:

- Partner did not identify any CRECs during the course of this assessment.

Historical Recognized Environmental Condition

A *historical recognized environmental condition (HREC)* refers to a previous release of hazardous substances or petroleum products affecting the that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment:

- Partner did not identify any HRECs during the course of this assessment.

Business Environmental Risk

A *Business Environmental Risks (BER)* is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that asbestos-containing material (ACM) and/or lead-based paint (LBP) are present. Readily visible suspect ACMs and painted surfaces were observed in good condition. Should these materials be replaced, the identified suspect ACMs and LBPs would need to be sampled to confirm the presence or absence of asbestos or lead prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.

Significant Data Gaps

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 and E1527-21 of 1271-1279 East Julian Avenue in San Jose, Santa Clara County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of RECs, CRECs, or HRECs in connection with the subject property; however, a BER was identified. Based on the conclusions of this assessment, Partner recommends no further investigation of the subject property at this time.

RE: CITY DIRECTORY RESEARCH
1271-1279 E. Julian Avenue
SAN JOSE, CA 95116

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

A Message from the U.S. Environmental Protection Agency

Across America, the sources of both tap and bottled drinking water include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and metals, can be naturally occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, which can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- **Radioactive contaminants**, which can be naturally occurring or result from oil and gas production and mining activities.

To ensure that tap water is safe to drink, the EPA and SWRCB prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. SWRCB regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV and AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their healthcare providers. EPA and Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at 800-426-4791.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at 800-426-4791.

SAFEGUARDING YOUR WATER SUPPLY

PROTECTING our water supply is important to ensure that water is safe from contamination and aesthetically pleasing for use. Protection begins in the watersheds, where people and their activities can be a major cause of source contamination. Contamination requires additional treatment, which increases the cost to deliver water to your tap.

PARTICIPATING in public meetings and forums regarding water issues enables decision-makers to hear your perspective and allows you to be directly involved in protecting your water supply. Visit www.sanjoseca.gov/councilagenda for San José City Council meeting agendas.

UNDERSTANDING that drinking water, including bottled water, may reasonably be expected to contain at least minute amounts of contaminants will help you make an informed choice about your drinking water. The presence of contaminants does not necessarily indicate a health risk.

The Source of Your Water

The San José Municipal Water System (Muni Water) serves the North San José, Alviso, Evergreen, Edenvale and Coyote Valley communities of the City of San José. The source of your water depends on the service area in which you are located.

■ North San José/Alviso Service Area

Muni Water purchases a blend of Hetch Hetchy water and treated water from the San Francisco Public Utilities Commission (SFPUC) and delivers it to our Alviso and North San José customers. In 2020, the Hetch Hetchy Watershed provided most of the total SFPUC water supply, supplemented by local watersheds in Alameda and Santa Clara counties. The major water source originates from spring snowmelt flowing down the Tuolumne River to the Hetch Hetchy Reservoir, where it is stored. Since this water source meets all federal and state criteria for watershed protection, disinfection treatment practices, bacteriological quality monitoring, and high operational standards, the EPA and state of California have granted this water source a filtration exemption.

The Alameda Watershed spans more than 35,000 acres in Alameda and Santa Clara counties. Surface water from rainfall and runoff is collected in the Calaveras and San Antonio reservoirs. Prior to distribution, the water from these reservoirs is treated at the Sunol Valley Water Treatment Plant (SVWTP). Filtration, disinfection, fluoridation and corrosion control treatment are provided for the combined Hetch Hetchy and SVWTP water at the Sunol Chloramination and Fluoridation facilities.

The SFPUC actively and aggressively protects the natural water resources entrusted to its care. An annual report on the Hetch Hetchy Watershed reflects the evaluation of its sanitary conditions, water quality and potential contamination sources. The report also presents performance results of watershed management activities implemented by the SFPUC and partner agencies to reduce or eliminate potential contamination sources. The SFPUC also conducts sanitary surveys of the local watersheds every five years. These surveys identified wildlife, livestock and human activities as potential contamination sources. You may contact the San Francisco office of the State Water Resources Control Board's Division of Drinking Water at 510-620-3474 for review of these reports.

In 2020, groundwater from local deep-water wells in North San José was utilized to supplement the SFPUC supply. With this additional water source, some customers may have received a blend of groundwater and SFPUC water. A slight difference in taste and odor may have been noticed, since groundwater generally has a higher mineral content than surface water.

Muni Water conducted a one-time source water assessment of the wells in January 2003.*

■ Evergreen Service Area

Muni Water purchases treated surface water from Valley Water (formerly known as the Santa Clara Valley Water District) and delivers it to our Evergreen customers. Valley Water's surface water is mainly imported from the South Bay Aqueduct, Dyer Reservoir, Lake Del Valle and San Luis Reservoir, which all draw water from the Sacramento-San Joaquin Delta watershed. Valley Water local surface water sources include Anderson and Calero reservoirs. Water from imported and local sources is pumped to and treated at three water treatment plants located in San José.

Since 2006, Valley Water has used ozone as the primary disinfectant. Ozone disinfection is highly effective at inactivating microbial

contaminants and creates fewer disinfection by-products than chlorine. Ozone also effectively removes negative tastes and odors often caused by seasonal algal blooms in the Delta source waters.

Valley Water's source waters are vulnerable to potential contamination from a variety of land use practices, such as agricultural and urban runoff, recreational activities, livestock grazing, and residential and industrial development. Imported sources are additionally vulnerable to wastewater treatment plant discharges, seawater intrusion, and wildfires in open space areas. Local sources are additionally vulnerable to contamination from commercial stables and historic mining practices. No contaminant associated with any of these activities has been detected in Valley Water's treated water. The water treatment plants provide multiple barriers for physical removal and disinfection of contaminants. For additional information, visit the Valley Water website at www.valleywater.org.

During 2020, Muni Water utilized groundwater from local deep-water wells to supplement Valley Water's supply. Some customers may have received a blend of groundwater and Valley Water's treated water. A slight difference in taste and odor may have been noticed, since groundwater generally has a higher mineral content than surface water. Muni Water conducted a source water assessment for the Evergreen wells in December 2014.*

■ Edenvale Service Area

Groundwater from deep-water wells provides 100 percent of the supply for the Edenvale service area. Muni Water conducted a one-time source water assessment for the Edenvale wells in January 2003.* Although the source is considered potentially vulnerable to chemical and petroleum processing activities, no contaminants associated with these activities have been detected.

■ Coyote Valley Service Area

Groundwater from deep-water wells provides 100 percent of the supply for this service area. An assessment of these wells was conducted in June 2004,* and potable use of the groundwater began in 2005. Although the source is considered potentially vulnerable to agricultural drainage, unauthorized dumping, storage tank leaks, and sewer collection systems, no contaminants associated with these activities have been detected.

* For information about the type of contaminants tested or to get a copy of the groundwater well assessment reports for your service area, please contact a Water Quality Engineer at 408-277-3671.

Water Quality

Coliforms, reported as “Total Coliform,” are bacteria that are naturally present in the environment and are used as an indicator that other potentially harmful bacteria may be present. Standards for compliance vary depending on the size of the distribution system. In larger systems, 95 percent of all samples taken each month must be free of coliforms. In smaller systems, no more than one sample per month may test positive for the presence of coliforms.

Disinfection of surface water is necessary to destroy disease-causing organisms for the protection of public health. In Evergreen, North San José and Alviso, water is disinfected using chloramine. Except for a slight chlorinous taste or odor, chloramine is not harmful to the general public. However, it must be removed for kidney dialysis machines and aquariums. If you are receiving kidney dialysis treatment, please contact your doctor or dialysis technician. For pet fish, contact your local fish store for more information about special water treatment.

Fluoride is added to the treated water supplies in Evergreen, North San José and Alviso to help prevent dental cavities in consumers.

In Evergreen, Muni Water began fluoridating the treated water it received from Valley Water following an Evergreen community advisory vote in the early 1960s. Valley Water became responsible for fluoridating the water supply in 2016 and now provides fluoridation of the water supply at their water treatment plants.

SFPUC has been fluoridating its water supplies since November 2005. The fluoride levels in the treated water are maintained within the range required by state regulations.

In 2020, some areas of Evergreen, North San José and Alviso may have received a blend of treated water and non-fluoridated groundwater. As a result, some customers periodically received water with fluoride levels slightly below the recommended range.

At present, additional fluoride is not added in Edenvale or Coyote Valley service areas. Consult your doctor or dentist if you are considering additional fluoride supplements or treatments.

Hardness consists mainly of calcium and magnesium salts. Although it does not pose

a health risk, it may be considered undesirable for other reasons. Some benefits to reducing hardness by using water softeners are reductions in soap usage, longer life for water heaters, and less incrustation of pipes. Some disadvantages are an increase in sodium intake (depending on the type of softener used), proper maintenance and servicing requirements, and potential adverse effects on plants and landscaping.

Turbidity is a measure of the water’s cloudiness. It is monitored because it is a good indicator of the effectiveness of the water treatment process. The turbidity standard for unfiltered supplies (e.g., Hetch Hetchy) is 5 NTU. The turbidity for filtered water supplies (e.g., Valley Water treated water) must be less than 0.3 NTU 95 percent of the time and at no time higher than 1 NTU.

Cryptosporidium and **Giardia lamblia** are parasitic microbes found in most surface water. The SFPUC and Valley Water regularly test for these waterborne pathogens and found them at very low levels in source and/or treated water in 2020. However, current test methods approved by the EPA do not distinguish between dead organisms and those capable of causing disease. Ingestion of *Cryptosporidium* and *Giardia lamblia* may produce symptoms of nausea, abdominal cramps, diarrhea and associated headaches. *Cryptosporidium* must be ingested to cause disease, and it may be spread through means other than drinking water.

Lead, if present at elevated levels, can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Muni Water is responsible for providing high-quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 800-426-4791 or at www.epa.gov/lead.

The water at all 20 public K-12 schools in the Muni Water service area has been tested in recent years, and results showed no detections of lead.

2020 Water Quality Data

Water at various locations in the distribution system is tested by certified City staff and a private, state-certified laboratory using the latest testing procedures and equipment. During 2020, numerous tests were conducted on samples taken from the distribution system. In addition to these tests, Valley Water and SFPUC perform their own water quality analyses of the source and treated water.

Test results from the distribution system and source water analyses are shown in the table. Some of the data, though representative, are more than one year old. SWRCB allows monitoring for some constituents less than once per year since their concentrations do not change frequently.

Lab analysis was also performed for many constituents other than those listed in the tables; only those constituents detected in the tap water are shown. For a complete list of all the constituents analyzed or any questions about this report, please contact a Water Quality Engineer at 408-277-3671.

Make Water Efficiency a Way of Life

Muni Water's customers demonstrated their continued commitment to conservation by reducing water use in **2020 by 19 percent** compared to seven years ago during the drought! It's important to eliminate water waste and make efficient water use a part of our daily lives.

To prevent water waste, the City has water use rules that remain in effect at all times, regardless of drought conditions. There are also programs in place to help make efficient water use a daily practice.

For water-efficiency tips or to view the complete list of water use rules in effect at all times, please visit www.sjenvironment.org/waterefficiency.

Definitions

AL (Regulatory Action Level)

The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

MCL (Maximum Contaminant Level)

The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technically feasible. Secondary MCLs are set to protect the odor, taste and appearance of drinking water.

MCLG (Maximum Contaminant Level Goal)

The level of a contaminant in drinking water below which there is no known or expected risk to health. The EPA sets MCLGs.

MRDL (Maximum Residual Disinfectant Level)

The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG (Maximum Residual Disinfectant Level Goal)

The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

NL (Notification Level)

Subject: FW: [EXTERNAL] Hazardous Materials Spill Report: Cal OES Control #:20-0551

Hi Somira,

Please file in the Prop 65 Archive. Also, please create an FA and CO and assign it to Mickey.

Mickey, this came in as a complaint to CalEPA as well (I will forward the email just in case you didn't get it). Since this is a residence I would like you to handle it with a trainee (I am thinking Jean since Yoni caught a similar one in Morgan Hill) or have them lead and you guide them.

Let me know if you have any questions.

Thanks!

Matt

Past Use that Caused Contam:	LAND DISPOSAL / FILL, UNDERGROUND STORAGE TANKS		
Potential Media Affected:	OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR, UNDER INVESTIGATION		

Potential Contaminant of Concern:

ARSENIC NATURALLY OCCURRING ASBESTOS (NOA) ORGANOCHLORINE PESTICIDES (8081 OCPS) PETROLEUM POLYNUCLEAR AROMATIC HYDROCARBONS (PAHS) VOLATILE ORGANICS (8260B VOCS)

SITE HISTORY:

State funds are not being used for this project and so DTSC oversight is not required. However, the project proponent entered into a Voluntary Cleanup Agreement with DTSC as the project lender is requesting DTSC oversight and concurrence of the investigation and mitigation work. Site was formerly a tile and materials storage facility. Potential contaminants of concern included organochlorine pesticides (OCPs) and arsenic from former pesticide use, naturally occurring asbestos (NOA), and petroleum hydrocarbons from stockpiled soil generated from the removal of former gasoline and diesel underground storage tanks (USTs) from an adjacent property. In addition, soil gas and groundwater beneath the site may be impacted by the former USTs from the adjacent property. Prior to coming to DTSC, the project proponent conducted a Phase I/Phase II investigation of the site which included the collection and analysis of soil samples for NOA, OCPs, arsenic, and petroleum hydrocarbons (Arcadis U.S., Inc. - September 30, 2010). Based on the results of the Phase I/Phase II investigation, additional sampling was conducted (soil and groundwater) and is documented in the Phase I/Phase II Addendum (Arcadis U.S., Inc. - February 24, 2011). Finally, a Cap Design letter was developed to address naturally occurring asbestos at the Site (Arcadis U.S., Inc. - March 18, 2011). Based on a review of these three documents, DTSC directed that a soil gas investigation be conducted to characterize impacts to soil gas beneath the site and so complete characterization of the site. Results of the soil gas investigation indicated levels of VOCs in soil gas at both 5.5-feet and just above groundwater to be within the acceptable range of risk (1E-6) for cumulative cancer risk. As presented in the Phase I/II report and Phase I/II Addendum, residual concentrations of arsenic and OCPs remain in site soils which slightly exceed acceptable risk ranges. However, the site will be capped to address NOA as presented in the Cap Design Letter, and on August 3, 2011, DTSC concurred with the conclusion that direct exposure to NOA as well as OCPs and arsenic will be mitigated by the use of hardscape and in landscape areas with a one to two foot clean fill cap over a warning barrier. DTSC further recommended that long-term operation and maintenance of the cap be implemented concurrent with DTSC's Interim Guidance Naturally Occurring Asbestos at School Sites, revised in 2004. On August 16, 2011, DTSC reviewed EnviroStor to ensure it's completeness and issued a memo to DTSC's Cost Recovery Unit to close the project billing.

This site contains a warehouse and stone-working shop. On May 2005, one 2,000 gallon UST used to store gasoline was removed from the site. Confirmation soil samples collected beneath the tank indicated gasoline has been release and report showed TPHg 1.5 ppm and MTBE 1.9 ppm. Subsurface investigations were conducted at the site in July and September 2006. A total of 11 temporary borings were advanced at the site, The investigaiton findings indicated that impacts to soil were restricted to the immediate vicinity of the former UST, however petroleum hydrocarbon impacts to groundwater appeared to extend southward beneath Five Wounds Lane, In June 2007 six borings at the site were advanced. Results of the investigation indicated that contaminants had migrated south-southeast beneath Five Wounds Lane and MTBE concentrations in groundwater appeared to increase with distance from the former UST excavation. In September 2007 five wells were constructed, one within the boundaries of the former UST and four ofsite within the public right-of-way of Five Wounds Lane. the lateral extent of the plume west of MW-3 and south of MW-4 was not defined and additional investigation was assessed. In February 2008, grab groundwater samples from three borings located west of MW-3 and southwest of MW-4 indicated that the non=detect plume boundary exists somewhere within 50 feet west-southwest of Mw-3. TPHg and MTBE were both reported at c concentration of 69 ppb in the grab groundwater sample. Site access to the Five Wounds Catholic School property to advance a boring south of MW-4 was not obtained. On October 2008, three additional MW were installed. Last sampling event took place October 2008 and resulted in the following highest concentrations: TPHg 290 ppb and MTBE 276 ppb. Workplan to define the lateral extent and to conduct soil gas survey was requested in May 2009.

Site History:			

This site contains a warehouse and stone-working shop. On May 2005, one 2,000 gallon UST used to store gasoline was removed from the site. Confirmation soil samples collected beneath the tank indicated gasoline has been release and report showed TPHg 1.5 ppm and MTBE 1.9 ppm. Subsurface investigations were conducted at the site in July and September 2006. A total of 11 temporary borings were advanced at the site, The

investigation findings indicated that impacts to soil were restricted to the immediate vicinity of the former UST, however petroleum hydrocarbon impacts to groundwater appeared to extend southward beneath Five Wounds Lane. In June 2007 six borings at the site were advanced. Results of the investigation indicated that contaminants had migrated south-southeast beneath Five Wounds Lane and MTBE concentrations in groundwater appeared to increase with distance from the former UST excavation. In September 2007 five wells were constructed, one within the boundaries of the former UST and four offsite within the public right-of-way of Five Wounds Lane. the lateral extent of the plume west of MW-3 and south of MW-4 was not defined and additional investigation was assessed. In February 2008, grab groundwater samples from three borings located west of MW-3 and southwest of MW-4 indicated that the non-detect plume boundary exists somewhere within 50 feet west-southwest of Mw-3. TPHg and MTBE were both reported at a concentration of 69 ppb in the grab groundwater sample. Site access to the Five Wounds Catholic School property to advance a boring south of MW-4 was not obtained. On October 2008, three additional MW were installed. Last sampling event took place October 2008 and resulted in the following highest concentrations: TPHg 290 ppb and MTBE 276 ppb. Workplan to define the lateral extent and to conduct soil gas survey was requested in May 2009.

SITE HISTORY:

The approximately 3.3-acre site is currently occupied by elementary school buildings and residential homes, surrounded by residential development and a city park. Prior to the current development, the site was occupied by residential structures and a small equipment repair shop. Prior to 1900, it was utilized as a dump for general refuse. Additionally, an underground storage tank was removed from one of the parcels. This site is being addressed as part of the Watson Park Project.

Comments: Completed SI. In August 1986, while transferring solvent from one subsurface underground tank to another, about 260 gallons solvent (Hi Sol #10) spill occurred in the underground storage tank (UST) farm. The subsequent investigation found levels of total hydrocarbons in the soil (7600 ppm) at the site and in the groundwater (56 ppb) below the site. SF Regional Water Quality Control Board (RWQCB) issued Cleanup and Abatement Order (CAO) No. 87-004 to Dap. Starting in August 1988, seven USTs and contaminated soil were removed. The soil analyses results showed ethyl benzene (5 to 14 ppb), 1,4-dichlorobenzene (15 ppb), toluene (0.8 to 20 ppb) and xylene (15 to 150 ppb).

How Discovered Description:

Calwater Watershed Name: Santa Clara - Coyote Creek (205.30)
DWR GW Subbasin Name: Santa Clara Valley - Santa Clara (2-009.02)
Disadvantaged Community: Disadvantaged Community
Coordinate Source:
Discharge Cause: Unknown
Discharge Source: Other
File Location: All Files are on GeoTracker or in the Local Agency Database
Site History:

Subsurface investigations have revealed that PCE, as well as other Volatile Organic Chemicals (VOCs) are present beneath the site. PCE was likely released to the subsurface during the operations of a dry cleaning business which historically operated at the site. The PCE has impacted soil, soil vapor, and groundwater beneath the property. Residential properties located downgradient of the site. Additional sampling in and around the site will be required to develop a comprehensive plan to remediate the contamination to acceptable levels. Once the contaminant plume is adequately delineated, full scale implementation of a remediation system is expected to take several months and may operate for several years.

Site History:						

Site History: The site use is currently a gasoline service station. The former USTs were removed in 1990, and contaminated soil was subsequently over-excavated. Elevated soil concentrations remain immediately below the former UST(s), but the lateral extent is defined. Groundwater and soil gas were monitored over the course of 25 years and 8 years, respectively. Case closure was previously considered in 2015. DEH received public comments from the neighbor who owns 1564 and 1570 McKee Road, requesting additional soil gas assessment. The assessment was targeted to evaluate potential off-site impact to the two referenced properties. Following additional assessment, DEH believes that the plume has been adequately assessed and satisfies all LTCP criteria. Site Management Requirements: Residual contamination in soil, groundwater, and soil vapor remains at the site that could pose an unacceptable risk under certain site development activities such as, but not limited to, site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.

Site History:

Site History: The site use is currently a gasoline service station. The former USTs were removed in 1990, and contaminated soil was subsequently over-excavated. Elevated soil concentrations remain immediately below the former UST(s), but the lateral extent is defined. Groundwater and soil gas were monitored over the course of 25 years and 8 years, respectively. Case closure was previously considered in 2015. DEH received public comments from the neighbor who owns 1564 and 1570 McKee Road, requesting additional soil gas assessment. The assessment was targeted to evaluate potential off-site impact to the two referenced properties. Following additional assessment, DEH believes that the plume has been adequately assessed and satisfies all LTCP criteria.

Site Management Requirements: Residual contamination in soil, groundwater, and soil vapor remains at the site that could pose an unacceptable risk under certain site development activities such as, but not limited to, site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time.

April 2008 - 6 soil borings (B1 through B6) were advanced onsite to depths of 20-25 feet below the ground surface (ft bgs). Soil samples were reported to have low concentrations of TPHg, TPHd, and TPHmo. Toluene, Ethylbenzene and Xylenes were reported at very low concentrations in the sample collected at 9.5 ft bgs in boring B3; all other soil samples were not reported to have detectable concentrations above the laboratory reporting limits. Grab groundwater samples were collected from borings B1 through B3 and were reported to have maximum concentrations of 670 ppb TPHg, 720 ppb TPHd, 2,800 ppb TPHmo, and 1.5 ppb Toluene. September 2008 - 5 borings (B7 through B11) were advanced onsite. Soil samples were reported to have low to non-detectable concentrations of the Constituents of Concern (COCs). Grab groundwater samples were and reported to have maximum concentrations of 81 ppb TPHg, 370 ppb TPHd, and 3,200 ppb TPHmo. October 2009 - 3 monitoring wells were installed (MW1 through MW3). Clean Harbors San Jose, LLC operates a rail spur transfer facility at 660 Lenfest Road in San Jose for bulk liquid which includes both hazardous wastes and hazardous substances. The type of hazardous wastes allowed at the facility is Oily Water, Lean Water, Fuels, Aqueous Solution and Recyclable Liquids.

DTSC issued a Standardized Hazardous Waste Facility Permit on October 26, 2007. The Permit became effective on November 27, 2007 and expires on November 26, 2017. The maximum hazardous waste transfer and storage capacity at the Lenfest Facility at any given time is 56,500 gallons.

The Lenfest Facility only accepts bulk liquid hazardous wastes originating from Clean Harbors San Jose, LLC, located at 1021 Berryessa Road, San Jose, California (Berryessa Facility). The Berryessa Facility has a Hazardous Waste Facility Permit for treatment and storage of hazardous waste and provides the staff, supervision and management for the Lenfest Facility. The Berryessa Facility also provides Lenfest Facility with registered hazardous waste transporters or licensed third party haulers to transport hazardous wastes in closed tanker trucks or vacuum trucks from the Berryessa Facility to the Lenfest Facility. Both the Berryessa Facility and Lenfest Facility are operated by Clean Harbors San Jose LLC, located at 1021 Berryessa Road, San Jose, California. The distance between the Berryessa Facility and the Lenfest Facility is approximately one mile.

The Lenfest Facility has one permitted Transfer and Storage Unit for transfer and storage of hazardous waste. There are four rail tank cars stationed at the rail spur at any given time. Each rail tank car has a rail track pan for collecting drips and possible spills. Two of the rail track pans connected by a collection header or drain pipe to an open sump. Transfer of hazardous waste from the tanker truck or vacuum truck parked on a concrete pad into the rail tank car is only allowed at rail tank cars that have rail track pans connected to the open sump. Transfer of hazardous waste from the tanker truck or vacuum truck is not allowed at the other two rail tank cars whose rail track pans are not connected to the open sump. Hazardous waste in each rail tank is stored at this facility up to ten days prior to shipment to various treatment, storage, recycling, or disposal facilities throughout the country.

products, arsenic, and other metals. The Site is improved with several building and associated paving and minimal landscaping. One of the parcels is a former rail spur alignment. The areas surrounding the Site are generally residential and light-industrial. The Site properties were first developed between the 1960s and 1970s with the current structures, prior to which the land was either vacant or under agricultural use. Current and historical Site activities have included warehousing, manufacturing and assembly, automotive repair related operations, and other light industrial activities. Known hazardous material and petroleum products at the sites have included plating chemicals and petroleum fuels and oils.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Formerly Utilized Sites Remedial Action Program:

[DOE FUSRAP](#)

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List:

[NPL](#)

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 30, 2022

National Priority List - Proposed:

[PROPOSED NPL](#)

Sites proposed - by the EPA, the state agency, or concerned citizens - for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: Mar 30, 2022

Deleted NPL:

[DELETED NPL](#)

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Feb 24, 2022

Inventory of Open Dumps, June 1985:

ODI

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:

SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Comprehensive Environmental Response, Compensation and Liability Information System -

CERCLIS

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Federal Institutional Controls- ICs:

[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

The ERIS **Physical Setting Report - PSR** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Federal Sources

FEMA National Flood Hazard Layer

FEMA FLOOD

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data

INDOOR RADON

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data

PWSV

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level

RADON ZONE

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS)

SDWIS

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database

SSURGO

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data

US WETLAND

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo

US TOPO

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology

US GEOLOGY

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System

FED USGS

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells

OGW

A list of Oil and Gas well locations. This is provided by California's Department of Conservation Division of

Appendix

Oil, Gas and Geothermal Resources.

Periodic Groundwater Level Measurement Locations

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

MONITOR WELLS

Well Completion Reports

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.
