

The proposed San Joaquin field Division Operations and Maintenance Center Drainage Culvert Replacement Project has the potential to impact natural resources as discussed in the attached electronic copy of the Initial Study/Proposed Mitigated Negative Declaration. The following table summarizes the potential environmental impacts of the project and with implementation of applicable avoidance, minimization, and mitigation measures, impacts are estimated to be reduced to less than significant levels.

**Table 1 - Potential Impacts and Mitigation Measures**

Potential Impact	Mitigation Measure(s)
The project may potentially violate air quality standards or contribute to an existing or projected air quality violation.	AQ-1
The proposed project may have potential impacts on special-status species including California glossy snake, blunt-nosed leopard lizard, San Joaquin whipsnake, San Joaquin kit fox, and loggerhead shrike.	BIO-1, BIO-2, BIO-3, and BIO-4
The proposed project may potentially impact the significance of an archaeological resource pursuant to Public Resources Code Section 15064.5.	CUL-1, CUL-2, CUL-3
The proposed project may potentially disturb human remains, including those interred outside of formal cemeteries.	CUL-2
The proposed project may potentially expose paleontological resources.	GEO-1
