

Summary Form for Electronic Document Submittal**Form F**

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Shasta County Wildfire Mitigation/Hazardous Fuels Reduction Project #5293

Lead Agency: CAL FIRE

Contact Name: Ben Rowe

Email: SacramentoPublicComment@fire.ca.gov

Phone Number: (530) 225-2432

Project Location: Wildland Urban Interface (WUI) throughout Shasta County

City

County

Project Description (Proposed actions, location, and/or consequences).

The objective of the project is to reduce hazardous fuel along critical transportation routes within high-priority Wildland Urban Interface (WUI) areas in Shasta County. The project site includes 11 Project Activity Areas (PAAs) throughout Shasta County adjacent to public roadways. The maximum potential acreage to be treated would be 6,291 acres. The proposed action consists of removing ground and ladder fuels up to 400 feet from each side of the PAA roadway centerlines, thinning trees to reduce crown closure, removing dead and dying trees within 100 to 200 feet of serviceable roadways, and after removal activities, applying herbicide at regular intervals to control the future regrowth of unwanted vegetation and maintain an understory canopy without fire-prone fuels. Generally, living trees will be spaced to a distance of greater than 30 feet. Both mechanized and manual techniques will be deployed for the removal of fuels. The treatment contractor will conduct the hazardous fuel reduction techniques appropriate for each individual parcel.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

Vegetation removal and herbicide application have the potential to impact biological resources within the project area. In addition, ground disturbance during project activities could result in impacts to cultural or tribal cultural resources.

Special-status plant and wildlife species and sensitive natural communities could occur within the project area. Mitigation measures are included to avoid impacts to these species including pre-treatment botanical surveys to identify and avoid special-status plant species with buffers, herbicide treatment buffers, riparian and wetland identification and exclusion, surveys for special-status amphibians and reptiles and avoidance or relocation of individuals prior to treatment, bat roost humane exclusion, artificial lighting standards, bat roost habitat avoidance, mammal den surveys and implementation of buffers, NSO/CSO surveys if activities occur within the nesting season and modification of treatment within confirmed activity areas, native milkweed buffer, and invasive species management.

Known cultural resources are present within the work area. Management recommendations included in the Archaeological Survey Report prepared for the project will be implemented to avoid impacts to known cultural resources, as well as unanticipated discovery of cultural resources and human remains.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

There are currently no know controversies.

Provide a list of the responsible or trustee agencies for the project.

Department of Forestry and Fire Protection (CAL FIRE)
California Department of Fish and Wildlife (CDFW)
