Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 12/04/1989
Comments: Facility identified via EPA Federal Investigation Team (FIT) Screening Site Inspection (SSI) Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 07/01/1991
Comments: Site Screening Done: LSI planned by EPA based on completed EPA SSI. Since 1965, Zep has manufactured hand soaps, degreasers, floor cleaners, detergents, and disinfectants at this three- acre facility comprised of two buildings. A 2000-gallon below-grade concrete sump that was used to collect waste- water until 1984 apparently leaked and contaminated sub- surface soil and the uppermost aquifer underlying the site with hazardous organic compounds including phenol, mineral spirits, methylene chloride, trichloroethane, tetrachloro- ethylene, chlorobenzene, dichloroethylene, and dichloro- ethane. Soil borings and subsequent groundwater investigations have identified the abandoned sump as the origin of contamination. Presence of TCA in a downgradient municipal drinking water well has confirmed the inter- connection between the uppermost and the lower aquifers and spread of the contaminant plume. Currently, evaluation of clean alternatives is in progress with oversight by the RWQCB.

ZEP MANUFACTURING COMPANY (Continued)

S100279160

Documented release of hazardous chemicals in drinking water has been observed. The target population for groundwater use is significant, so is the potential of release of waste volume in the environment. RWQCB is current lead.

CPS-SLIC:

Name: ZEP MANUFACTURING COMPANY
Address: 2970 CORVIN DR
City,State,Zip: SANTA CLARA, CA 95050
Region: STATE
Facility Status: Open - Inactive
Status Date: 01/09/2020
Global Id: SLT2O309200
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.375462
Longitude: -121.988657
Case Type: Cleanup Program Site
Case Worker: MD
Local Agency: Not reported
RB Case Number: 43S0198
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: The site has had a release of the solvent trichloroethene (TCE) to soil and groundwater. A plume of contaminated groundwater containing TCE and its breakdown products has migrated offsite. A groundwater extraction and treatment system was operated at the site and the groundwater pollutant concentrations were significantly reduced.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	Trichloroethylene (TCE), Freon, Other Metal
Site History:	The October 7, 1988 Sampling and Geochemical Analysis of Groundwater Samples presents the results of groundwater sampling for six sites including 3625 Peterson Way. The report indicates upgradient sites contributed to freon in groundwater and no volatile organic compounds were detected in groundwater at 3625 Peterson Way. Wells 46A1 and 46B1 were located on the property. The Regional Water Board reviewed and issued a "no further remedial investigation" letter on October 24, 1988. The documents refer to site as 3600 or 3625 Peterson. On March 14, 2019, Celina Hernandez (Water Board staff) reviewed the data and concurred with the October 24, 1988, letter for 3625 Peterson Way. The case status was changed from open-site assessment

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 12/22/1987
Comments: The Department of Health Services, Toxic Substances Control Division provided comments on the letter from Varian Solid State Microwave Division, dated November 9, 1987, in which Varian responded to a Report of Violations issued to the Varian facility located at 3251 Olcott Street. Copies of the Report of Violations and Varian's November 9, 1987 response letter are not available in DTSC's file.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 09/07/1993
Comments: Varian submitted to DTSC on September 7, 1993 a letter with documentation intended to demonstrate that they used less than 1,000 pounds of acids on a monthly basis during their occupancy of the site. Varian submitted this documentation to support their argument that they should not have to pay fees for the facility based on the quantity of acids used and the quantity of discharge from their acid neutralization system. Included with the letter are four attachments with the amounts of acids stored, their waste water reports, off-site shipments of corrosive wastes, and their rinse water pH calculations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/18/1991
Comments: Varian submitted to the U.S. Environmental Protection Agency a request to transfer their EPA ID No. CAT000625392 for the facility located at 3251 Olcott St to Litton, Solid State Division following the sale of the facility on February 25, 1991. Varian requested that their name be removed from the registration for the facility, and stated that they no longer assumed any responsibility for operations at the site. Varian indicated that Litton would submit a request for transfer as well. A copy of the request from Litton is not available in DTSC's file. There is not a copy of a response from U.S. EPA in DTSC's file.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 05/11/1984
Comments: The Department of Health Services, Toxic Substances Control Division (DHS) sent a letter responding to the request from a variance from Varian Associates, Inc. Solid State Microwave Division (Varian) for a variance from the Hazardous Waste Permit requirements and to revoke their Interim Status Document (ISD). Varian made the request because they no longer stored wastes for more than 90 days at the facility. DHS denied the variance request, stating that there was concern over

possible leakage of the contents of the sumps used for wastewater neutralization. DHS did indicate that they would modify Varian's ISD to reflect that they were not storing hazardous waste for more than 90 days. A copy of the Varian's request for a variance and to revoke the the ISD, reportedly made on May 6, 1983, could not be found in DTSC's file.

Environmental Interest/Information System:

HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Environmental Interest/Information System:
 AIR EMISSIONS CLASSIFICATION UNKNOWN
 US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type: Operation and Maintenance Report
Completed Date: 02/04/2008
Comments: DTSC has no comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan Amendment
Completed Date: 01/04/2013
Comments: Intel submitted an Addendum to the Operation and Maintenance Plan that presented the following: 1) an evaluation of current receptors and exposures on the three parcels making up the Intel Freedom Circle Site (Site); 2) results of additional soil sampling conducted on

Map ID
Direction

S105557580

Parcel 3; and 3) revised Figures 2 and 3 and protocol for inspection of Parcel 3 based on the recent and previous sampling results. DTSC has concurred with the conclusion in the Addendum that immediate asphalt maintenance in Parcel 3 is required only when any breaches, holes, and gaps that may result in exposure to soils one foot or more below the existing surface are identified during the annual inspections.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 02/09/2009
Comments: The gravel-covered portion of the cap on Parcels 1 and 2 appeared to be in good condition; Minor wear of the concrete surfaces was observed in Parcel 3. However, major cracks were observed near a storm drain in parking lot south of the Pedro s Restaurant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 04/14/2010
Comments: The gravel-covered portion of the cap on Parcels 1 and 2 appeared in good condition. Numerous asphalt cracks were observed around the storm drain south of Pedro's Restaurant of Parcel 3. Intel was required to repair by 6/30/2010

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Land Use Restriction Monitoring Report
Completed Date: 03/05/2012
Comments: DTSC conducted its annual site visit to check the condition of the cap over contaminated soil and to verify compliance with the Land Use Covenant. Numerous cracks were observed in Parcel 3. However, Intel is collecting soil samples for arsenic analysis on Parcel 3 for the purpose of better defining the area requiring asphalt maintenance. DTSC will make a determination on Parcel 3 after the sampling results are evaluated. No activities prohibited by the Land Use Covenant were observed.

S105557580

Comments: Terra Ventures, Inc. sent a letter to DTSC on 8/31/2020 regarding an emergency repair to a sewer line at Pedro's Restaurant located at 3935 Freedom Circle, Santa Clara. During the repair, the contractor removed soil from below 1 foot below ground around a broken sewer line. Soil disturbance occurred prior to the notification to DTSC. The property has a deed restriction (7/22/2004) that requires the owner to provide notice to DTSC at least 14 days in advance of any activity that will impact the cap (either asphalt or 1 foot of clean gravel) or disturb soils deeper than 1 foot below grade. For unplanned repairs, DTSC should be notified within 10 working days of both the discovery and repairs of any repair or damage. -EC, 8/31/2020

Completed Document Type: Operation and Maintenance Report
Completed Date: 01/17/2007
Comments: Report described activities at the site over the past year.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/04/2008
Comments: DTSC has no comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan Amendment
Completed Date: 01/04/2013
Comments: Intel submitted an Addendum to the Operation and Maintenance Plan that presented the following: 1) an evaluation of current receptors and exposures on the three parcels making up the Intel Freedom Circle Site (Site); 2) results of additional soil sampling conducted on Parcel 3; and 3) revised Figures 2 and 3 and protocol for inspection of Parcel 3 based on the recent and previous sampling results. DTSC has concurred with the conclusion in the Addendum that immediate asphalt maintenance in Parcel 3 is required only when any breaches, holes, and gaps that may result in exposure to soils one foot or more below the existing surface are identified during the annual inspections.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 02/09/2009
Comments: The gravel-covered portion of the cap on Parcels 1 and 2 appeared to be in good condition; Minor wear of the concrete surfaces was observed in Parcel 3. However, major cracks were observed near a storm drain in parking lot south of the Pedro s Restaurant.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 04/14/2010
Comments: The gravel-covered portion of the cap on Parcels 1 and 2 appeared in good condition. Numerous asphaalt cracks were observed around the storm drain south of Pedro's Restaurant of Parcel 3. Intel was required to repair by 6/30/2010

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Land Use Restriction Monitoring Report
Completed Date: 03/05/2012
Comments: DTSC conducted its annual site visit to check the condition of the cap over contaminated soil and to verify compliance with the Land Use Covenant. Numerous cracks were observed in Parcel 3. However, Intel is collecting soil samples for arsenic analysis on Parcel 3 for the purpose of better defining the area requiring asphalt maintenance.

Completed Document Type: Operation and Maintenance Report
Completed Date: 02/21/2014
Comments: Intel performed an annual inspection as required by the June 14, 2004 Operation and Maintenance Agreement. No breaches, holes in the clean soil/gravel and asphalt cap greater than one foot below the ground surface were observed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/22/2016
Comments: The environmental consultant for Intel, the site owner, performed an annual site inspection in December 2015. The consultant observed during the inspection that all requirements of the Operation and Maintenance Agreement were met for Parcels 1 and 2. However, in Parcel 3 a hole was observed during the inspection that was excavated to repair an irrigation line and was filled in after the repair. DTSC approved the inspection report, but requested further information on the irrigation line repair because DTSC received no notification of the repair.

Completed Date: 08/31/2020
Comments: Terra Ventures, Inc. sent a letter to DTSC on 8/31/2020 regarding an emergency repair to a sewer line at Pedro's Restaurant located at 3935 Freedom Circle, Santa Clara. During the repair, the contractor removed soil from below 1 foot below ground around a broken sewer line. Soil disturbance occurred prior to the notification to DTSC. The property has a deed restriction (7/22/2004) that requires the owner to provide notice to DTSC at least 14 days in advance of any activity that will impact the cap (either asphalt or 1 foot of clean gravel) or disturb soils deeper than 1 foot below grade. For unplanned repairs, DTSC should be notified within 10 working days of both the discovery and repairs of any repair or damage. -EC, 8/31/2020

UNISYS SAN TOMAS FACILITY (Continued)

S102802176

Site History: Solvents were detected at the site in 1982. Subsequent investigation and several monitoring wells were installed in the early 1990s, with the highest concentration at 900 ug/L. of total VOCs. A groundwater pump and treat system operated from November 1995 through February 1996 removing only 1.5 LBS of VOCs. In 1999, in-situ bioremediation was implemented by injecting hydrogen release compound into groundwater. A No Further Action letter was issued on March 1, 2012.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Comments: DTSC performed a site screening to determine whether any releases have occurred at the site that require corrective actions. Based on information gathered during the site screening, it was found that Varian Associates performed investigation and cleanup with oversight by the Regional Water Quality Control Board (RWQCB), including remediating groundwater contaminated with 1,1,1-trichloroethane. Therefore DTSC recommended no further action is required and that the site status be identified as refer to RWQCB.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

S103948915

Completed Sub Area Name: Not reported
Completed Document Type: Phase 1 Addendum
Completed Date: 01/04/2016
Comments: DTSC performed a site screening to determine whether any release of hazardous substances or wastes have occurred at the site that require corrective actions. Three firms, all of which manufactured integrated circuits, operated on this site: Zoran Corporation, Synergy Semiconductor, and STC Computer Research. An underground storage tank was used to store various waste solvents between 1981 and 1985. The UST was removed in July 1985. In September 1986, three groundwater monitoring wells were installed and sampled semi-annually between 1986 and 1990. Various volatile organic compounds (VOCs) were detected in groundwater. Another groundwater monitoring well was installed in 1990. The wells were resampled in 2009 and the VOCs were at or below the ESLs. The Regional Water Quality Control Board, San Francisco Bay Region, issued a no further action letter with a Case Closure Summary to the Sobrato Organization in October 2009.

Longitude: -121.992015838623
Case Type: Cleanup Program Site
Case Worker: UUU
Local Agency: Not reported
RB Case Number: 43S0786
File Location: Regional Board
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Acetone, Trichloroethylene (TCE)
Site History: Three firms previously operated on the site, all in the semiconductor industry: Zoran Corporation (manufactured integrated circuits), Synergy Semiconductor (acquired by Micrel, Inc. in 1988), and STC Computer Research (no longer exists). Solvent UST located on south side of building and operated 1981-1985, stored various solvents including TCE, removed in 1985. Single soil boring next to UST in 1983 didn't detect VOCs in soil or groundwater. Four monitoring wells installed (MW-1 west of building, MW-2 on southern property boundary, MW-3 near UST, and MW-4 on northern property boundary). Initial groundwater gradient was to NW, 3Q09 gradient is to NE. 3Q09 depth to

Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require DTSC to pursue corrective actions. Siliconix has been operating a semiconductor manufacturing facility on the site since around 1969. Siliconix has operated four hazardous waste treatment units under the Permit By Rule, Conditionally Authorized, and Conditionally Exempt Specified Wastestream permitting tiers, including an acid waste neutralization unit, hydrofluoric waste treatment unit, drum washer, and plating line. The site was identified as a source of downgradient groundwater contamination and the Regional Water Quality Control Board (RWQCB) began overseeing investigations at the site in 1987. Groundwater remediation began at the site in 1990. RWQCB continues to oversee cleanup at the site.

Completed Date: 07/01/1991
Comments: EPA completed Preliminary Assessment and recommend NFA; DTSC needs to determine site status. Site Screening. In 1980, Granger Associates, a tele- communications equipment manufacturer, became the first tenant of this fully fenced facility comprised of 3 buildings, with a total area of 78,870 sq. ft. Between 1980 and 1985, Varian relocated. Granger continued its operation until 1990 when Digital Switch Communication Corp. (DSC) bought them out. While information about Granger's process and waste management is not available, Varian used hydrochloric & nitric acid, caustic soda, & trichloroethane (TCE), and Granger used freon-113, butyl hethyl alcohol in their respective processes. Both have historically stored their waste at site for periodic transportation and disposal by specialty contractors. However, several accidental spillages have been recorded. Such spillages and probable leakage from a subsurface containment sump account for the detection of TCA, TCE, & PCE, along with various metals in soils groundwater at site. The site is underlain by two aquifers of which the lower is used for drinking water.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

WDS:

Name: EXCELICS SEMICONDUCTOR INC
Address: 2908 Scott Blvd
City: SANTA CLARA
Facility ID: San Francisco Bay 431017364
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 2
Facility Telephone: 4089708664

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Completed Date: 09/20/1993
 Comments: Akashic Memories Corporation closed the facility according to all applicable regulations and under the jurisdiction of the Santa Clara Fire Department. Air compressor oil had been released to a concrete pad and the soil directly beneath it. The concrete pad and approximately 50 tons of baserock and soil were excavated and disposed at off-site a permitted treatment and disposal facility and/or Class II landfill. All potentially hazardous debris was removed from the facility and disposed at permitted, off-site landfills.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 02/26/1993
Comments: Situated in a geologically confined zone of Santa Clara Valley this 2.5 acre site is underlain by an upper and a lower aquifers. Site soils and groundwater in the upper aquifer have been contaminated with various volatile organic compounds (VOC) principally trichloroethene (2.3ppm) trichloethane (0.14ppm), 1,2-dichloroethene (0.15), xylene (.07 ppm), freon-113 (.06 ppm) and acetone by the operations of the past operator. Fairchild Corp and the current operator micropower systems Inc. However, due to its poor quality, the upper aquifer is not a drinking water source. The lower aquifer with wide use as a source of drinking water has not been inspected due to a thick clay sequence and absence of interconnecting conduits withing two (2) miles of the site. Oversight of an ongoing groundwaer contamination, remediation and and review of a remedial action plan (rap) are underway by San Francisco Regional Water Quality Control Board (RWQCB).

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Completed Document Type: Phase 1 Addendum
Completed Date: 12/04/2013
Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require corrective actions. Closure of the Fairchild Semiconductor Company's manufacturing facility that was previously on the site was done with oversight from the City of Santa Clara Fire Department. Confirmation soil sampling was conducted as part of the facility's closure. Digital Realty Trust, Inc. had a Phase I Environmental Site Assessment performed in connection with a real estate transaction. Sampling did not identify contamination in the site soils associated with former on-site operations. Based on the information gathered

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 12/26/1990
Comments: SITE SCREENING DONE IN 1986 A CONCRETE 500-GALLON TANK WITH CRACKS IN IT WAS REMOVED FROM THE SITE. THE CRACKS PROMPTED SITE INVESTIGATIONS WITH PRIMARY OVERSIGHT FROM THE SFRWQCB WHICH IS THE LEAD AGENCY. SITE CLEAN-UP ORDER #90-062 ISSUED 5-90. AS PART OF THE CLEAN-UP, 5 GROUNDWATER MONITORING WELLS WERE INSTALLED INITIALLY, AND 2 MORE WERE LATER INSTALLED. QUARTERLY ANALYSIS OF THE WELLS IS OCCURRING. AMONG THE CONTAMINANTS DETECTED AT THE SITE INCLUDE: VOLITILE ORGANIC COMPOUNDS ,TOTAL PETROLEUM HYDROCARBONS AS GASO- LINE, TPH AS DIESEL/WASTE OIL, AND TOTAL OIL AND GREASE. THE HIGHEST REPORTED CONCENTRATION OF VOC'S IN SOILS INCLUDE TRICHLOROETHENE (TCE) AS HIGH AS 410 PPB AND TETRACHLOROETHENE (PCE) AS HIGH AS 36 PPB. VOC'S IN GROUNDWATER WERE ENCOUN TERED AS HIGH AS 2,900 PPB. PEA LOW

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region

CA BOND EXP. PLAN:

Responsible Party: NPL SITE CLEANUP WORKPLAN
 Project Revenue Source Company: Not reported
 Project Revenue Source Addr: Not reported
 Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: Monolithic Memories, the responsible party, is in compliance with an order issued by the RWQCB. DHS has budgeted \$50,000 for development, review and approval of a RAP and will seek to recover all actual costs from the responsible party.
 Site Description: Monolithic Memories operates an integrated circuit manufacturing facility at this 20-acre site. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite. The site is located adjacent to residential, industrial and commercial development.
 Hazardous Waste Desc: Subsurface investigations initiated in early 1982 resulted in the discovery of soil and ground water contamination. The contamination was apparently caused by leaks in an underground waste solvent piping system and by spills during the transport and handling of solvents. Contaminants present in the soil and ground water include trichloroethylene (TCE), dichloroethylene (DCE), trichloroethane (TCA), xylene, ethylbenzene, Freon and acetone.
 Threat To Public Health & Env: A ground water contaminant plume extends offsite and merges with another plume emanating from the National Semiconductor facility. About 300,000 people live within a three mile radius of the site and depend on the ground water as a source of drinking water.
 Site Activity Status: The responsible party has excavated and removed leaking underground tanks, installed a ground water extraction system and is further investigating the extent of the offsite plume.

Case Type: Cleanup Program Site
 Case Worker: UUU
 Local Agency: Not reported
 RB Case Number: 43-1935
 File Location: Not reported
 Potential Media Affected: Soil
 Potential Contaminants of Concern: Gasoline
 Site History: On April 5, 2019, Celina Hernandez (Water Board staff) reviewed the data and concurred with the September 18, 1996, rescission of site cleanup requirements (Order 96-124) for 1871-1881 Martin Avenue in San Jose. Since issuance of the 1996 rescission, the property was redeveloped with a new commercial building with multiple office spaces. Ms. Hernandez received confirmation from the Santa Clara Valley Water District that the four groundwater monitoring were destroyed in 1996 and 1997. The case status was changed from open-site assessment to case closed." All records are under case file SL20220838.

Completed Date: 02/04/2014
Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require corrective actions. Subsurface investigations initiated in January 1983 revealed the presence of various industrial chemicals in soil and groundwater at the facility. A groundwater extraction and treatment system was installed and was effective in reducing volatile organic compound concentrations. The Regional Water Quality Control Board (RWQCB) approved monitored natural attenuation as the remedy for the Site in 2007. RWQCB has indicated they will issue a Site closure letter after receiving the plans and acceptable cold-weather test results for the Site s proposed vapor intrusion mitigation system. Based on the information gathered during the site screening and the results of the site investigations and evaluations, DTSC concluded that the site status should be Refer to RWQCB. RWQCB is currently overseeing Monitored Natural Attenuation at the Site.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D004
Waste Description: ARSENIC

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D011
Waste Description: SILVER

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 05/02/1990
Comments: Site Screening Done: Three tanks, containing butyl acetate, xylene, and odorless mineral spirits (OMS), exist onsite. Tanks have been closed in place under the supervision of the City of Sunnyvale. OMS soil contamination is caused by a leaking fuel line. San Francisco RWQCB is the lead agency.

FINDS:

Registry ID: 110009531088

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Application
Completed Date: 08/23/2010
Comments: PS Business Parks was required to clean the building on the site to satisfy the Santa Clara Fire Department and to obtain permission to release the facility. PS Business Parks requested DTSC oversight of a risk assessment to evaluate elevated concentrations of nickel and copper found in various areas beneath the concrete building floor.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/19/2010
Comments: The Addendum documents additional soil sampling in May and June 2010 to evaluate the horizontal extent of nickel and or copper impacted and the removal of concrete and soil in the Plating Room and DES Room. The Addendum includes (as Attachment 4) a risk assesment of the remaining soils with metal concentrations exceeding screening levels.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 04/06/2010
Comments: The report summarizes the closure activities at the site and documents the sampling and disposal activities performed in accordance with the Santa Clara Fire Department Hazardous Materials Closure permit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 08/23/2007
Comments: The Phase I Environmental Site Assessment was submitted to DTSC along with the Request for Agency Oversight of a Brownfield Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: No Further Action Letter
Completed Date: 03/15/2011
Comments: DTSC reviewed a risk assessment submitted on behalf of PS Business Parks and agreed with its conclusions and determined that no further action is needed to address the residual copper and nickel in soil.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/27/2022	Source: EPA
Date Data Arrived at EDR: 11/01/2022	Telephone: N/A
Date Made Active in Reports: 11/15/2022	Last EDR Contact: 01/03/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/10/2023
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/27/2022	Source: EPA
Date Data Arrived at EDR: 11/01/2022	Telephone: N/A
Date Made Active in Reports: 11/15/2022	Last EDR Contact: 01/03/2023
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/10/2023
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/27/2022

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Number of Days to Update: 74	Next Scheduled EDR Contact: 01/30/2023
	Data Release Frequency: Quarterly

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/29/2022	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 08/18/2022	Telephone: 202-307-1000

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

HWT: Registered Hazardous Waste Transporter Database

A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

Date of Government Version: 10/03/2022

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2018

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06085C0063H	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06085C0064H	FEMA FIRM Flood data

06085C0227H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
MILPITAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/8 - 1/4 Mile North
Site Name:	Hewlett Packard (Avantek)
Site EPA ID Number:	CAD009442484
Surficial Aquifer Flow Dir.:	North-Northwest
Measured Depth to Water:	6.5 feet to 9 feet in the "A" zone aquifer and 24 feet to 33 feet in the "B" zone aquifer.
Hydraulic Connection:	An aquitard that is over 100 feet thick separates the surficial "A" and "B" aquifers from the lower aquifer, but documented discontinuities are present within 2 miles of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Cornerstone Earth Group were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 1320 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

TARGET PROPERTY: ADDRESS NOT IDENTIFIED IN RESEARCH SOURCE

The following Target Property addresses were researched for this report, and the addresses were not identified in the research source.

Address Researched

3065 Bowers Avenue

Address Not Identified in Research Source

2017, 2014, 2006, 2000, 1999, 1996, 1978, 1974, 1970, 1968, 1966, 1965, 1964, 1963, 1962, 1960, 1957, 1955, 1950, 1946, 1945, 1942, 1940, 1936, 1935, 1931, 1930, 1926, 1925, 1922

APPENDIX E – QUESTIONNAIRE AND RECENT REPORTS

**Environmental Questionnaire
(User Questionnaire)**

The ASTM Standard E1527-21 defines the User as the party seeking to use a Phase I Environmental Site Assessment to evaluate the presence of Recognized Environmental Conditions associated with a property. Per the ASTM Standard, the User should provide certain information to the environmental professional. Please provide the following information. Responses should be provided in good faith and to the extent of your knowledge. **Enter “unknown” if the requested information is not known.**

PROJECT DETAILS

- 1) **Describe the reason for performing the requested Phase I ESA.** For example, property acquisition/lender requirement, evaluation of business environmental risks, seeking to qualify for Landowner Liability Protections under CERCLA, etc.

- 2) **Please describe your intended use of the property.** For example, commercial office space, residential, mixed-use, etc. If the property is planned to be redeveloped, briefly describe the development plans.

- 3) **Will the development plans include excavation and off-site soil removal or the import of soil? If yes, please briefly describe.** Yes No

SITE DETAILS

- 4) **Please list all current and former addresses, along with each assessor’s parcel number (APN). Some sites have multiple addresses; all are needed, even if they are not in current use.**

<u>Address(es)</u>	<u>APN Number(s)</u>	<u>Lot Size (acres)</u>
--------------------	----------------------	-------------------------

- 5) **Please provide/attach a site plan that accurately shows the property boundaries.**

- 6) **Please list current site tenant(s), site use, and years of occupancy:**

<u>Tenant</u>	<u>Site Use</u>	<u>Years of Occupancy</u> <i>(e.g., From 1995 to 2007)</i>
---------------	-----------------	---

- 7) **Please list prior site tenant(s), site use, and years of occupancy:**

<u>Tenant</u>	<u>Site Use</u>	<u>Years of Occupancy</u> <i>(e.g., From 1975 to 1983)</i>
---------------	-----------------	---

8) Please indicate if you are aware of any of the following features currently or formerly at the site.

Structure/Feature Select All ⇨	Yes	No	Do Not Know
Aboveground Storage Tanks			
Agricultural Wells			
Air Emission Control Systems			
Boilers			
Burning Areas (waste burn pits or ash disposal areas)			
Chemical Mixing Areas			
Chemical Storage Areas			
Drainage Ditches			
Drums, Totes, and Intermediate Bulk Containers			
Elevators			
Emergency Generators			
Equipment Maintenance Areas			
Fill Placement (i.e., fill used to build up the site elevations)			
Groundwater Monitoring Wells			
Hoods and Ducting (associated with chemical use)			
Hydraulic Vehicle or Equipment Lifts

If you checked yes to any of the above, please provide a brief additional description here:

9) Please indicate if, to your knowledge, any of the following documents exist:

Document	Yes	No	Do Not Know
Environmental site assessments			
Environmental permits or violation notices			
Underground or above ground storage tank documents/permits			
Geotechnical reports or hydrogeologic studies			
Risk assessments			
Hazardous materials management plans or chemical inventories			
Safety/emergency response plans or spill prevention plans			
Compliance audits or community right-to-know plans			
Asbestos or lead based paint surveys			

If you checked yes to any of the above, please indicate the location of the documents.

Can copies be provided? Yes No

10) Have significant quantities of hazardous materials been used, stored, or generated on-site?

Yes No

If so, please describe the types and quantities and where these materials are or were located.

11) **Environmental Liens and AULs:** To meet the requirements of 40 CFR § 312.25, a search for the existence of Environmental Liens and Activity and Use Limitations (AULs) (such as engineering controls, land use restrictions, or institutional controls) must be performed by or on behalf of the party seeking to qualify for Landowner Liability Protection under CERCLA (*i.e.*, the User). Users may rely on transaction-related title insurance documentation such as Preliminary Title Reports and Title Commitments. ASTM E 1527-21 categorizes the requirement to conduct a search for Environmental Liens and AULs as a User responsibility.

Did a search of land title records identify any environmental liens or AULs that are in place or filed or recorded against the subject property under federal, tribal, state, or local law?

Yes No Search not yet completed

Is a Preliminary Title Report or Title Commitment available? If yes, please attach a copy.

Yes No

12) Are you aware of commonly known or reasonably ascertainable information about the site or adjoining properties that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, do you know of 1) past uses involving hazardous materials at the site or adjoining properties, 2) specific chemicals that were or are present at the site or adjoining properties, 3) spills or other chemical releases at the site or adjoining properties, or 4) any environmental cleanups at the site or adjoining properties?

Yes

No

If so, please briefly describe below, including whether reports documenting the activities are available for review by Cornerstone Earth Group.

13) Are you aware of 1) any pending, threatened or past litigation, or administrative proceedings relevant to hazardous substances or petroleum products at the site, or 2) any notices from any governmental entity regarding possible violations of environmental laws or possible liability related to hazardous substances or petroleum products?

Yes

No

If so, please briefly describe below.

14) Do you have any specialized knowledge or experience related to the site or nearby properties that is material to environmental conditions at the site? For example, are you involved in the same line of business as the current or former occupants of the site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes

No

If so, please briefly describe below.

15) In a transaction involving the purchase of commercial real estate, the User must consider the relationship of the purchase price of the property to the fair market value of the property if the property were not affected by hazardous substances. Do you believe that the purchase price of the subject property is lower than the fair market value due to contamination?

Yes

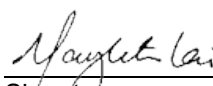

No

Not Applicable (no purchase involved)

David Jackson, Environmental Engineer
Intel Corporation
3065 Bowers Avenue – SC1
Santa Clara, California 95054

**RE: PRE-EXCAVATION SOIL SAMPLING RESULTS – SC1 BASEMENT
INTEL CORPORATION BOWERS CAMPUS
3065 BOWERS AVENUE
SANTA CLARA, CALIFORNIA
FARALLON PN: 2410-004**

Dear David Jackson:

Farallon Consulting, L.L.C. (Farallon) has prepared this letter to Intel Corporation (Intel) to document the results of the soil sampling services conducted on September 8, 2022 at Intel's Bowers Campus at 3065 Bowers Avenue in Santa Clara, California (herein referred to as the Site), as described in the letter regarding Proposal Soil Profiling and Technical Documentation in Support of Development Activity at Intel Corporation Bowers Campus, 3065 Bowers Avenue – SC1 Basement, Santa Clara, California dated August 26, 2022 from Henry Pietropaoli and Richard Makdisi of Farallon to David Jackson of Intel. The work was conducted in support of the excavation in the SC1 Basement area of the Site, which is being developed by Intel's general contractor. The Site location and SC1 Basement area are shown on Figure 1.

Henry Pietropaoli of Farallon met with David Jackson of Intel on September 8, 2022 to inspect the project area. The planned excavation in the SC1 Basement area at the Site will occur in a generally flat, rectangular area approximately 6 feet by 15 feet (90 square feet) to an average depth of 2 feet below ground surface (bgs). The excavation will generate approximately 6.7 cubic yards of soil, which is planned for off-Site disposal. Therefore, the soil profiling requires collection of one composite soil sample, which is the necessary minimum density (approximately one composite sample per 250 cubic yards) to profile the soil adequately for off-Site disposal at a California-regulated landfill facility, and to conduct an evaluation of construction-related health and safety issues.

The in-situ soil profiling was conducted to meet Intel's analytical requirements and to support off-Site disposal to an appropriate California-regulated landfill facility and allow direct loading of the soil export for transport directly to the designated soil disposal facility. The analysis also is adequate to conduct an evaluation of construction-related health and safety issues.

PRE-FIELD WORK ELEMENTS

Pre-field work elements included the following:

- David Jackson of Intel provided a Site Plan showing the location of the SC1 Basement excavation area;
- Farallon prepared an updated Site-specific Health and Safety Plan for Farallon personnel regarding the sampling activity;
- Intel's Site general contractor conducted the subsurface utility clearance prior to Farallon conducting sampling at the Site; and
- Farallon scheduled and coordinated the analytical laboratory and subsurface locator utility subcontractors.

SAMPLING AND ANALYTICAL METHODS

Farallon geologist Henry Pietropaoli conducted the soil profiling sampling on September 8, 2022. David Jackson of Intel provided access to the excavation area for the in-situ sampling. Four borings were advanced using a 4-inch-diameter stainless steel hand auger to collect soil from four depths (0.5, 1.0, 1.5, and 2.0 feet bgs) between the surface and the planned maximum excavation depth of approximately 2 feet deep in four locations in the excavation area, as shown on Figure 1. The borings were spaced evenly throughout the excavation area. For the 6.7-cubic-yard soil volume, Farallon collected one 4-point soil composite sample (SC1 Base Comp) consisting of soil collected from four points at the following depths: 0.5, 1.0, 1.5, and 2.0 feet bgs. Soil for laboratory analysis was collected from the auger tip. Compositing entails picking out large rocks and organics, homogenizing the soil from the four depths, and placing the mix into a laboratory-supplied sample container.

ANALYTICAL METHODS

Based on the Site history and input from Dawn Addonizio, Intel Senior Environmental Health and Safety Operations Environmental Engineer, an analytical suite was selected for the soil profiling and evaluation of construction-related earthwork health and safety issues. Farallon assumed that all soil would be disposed of off the Site at a California-regulated landfill. The soil sample was analyzed by the following methods:

- Total petroleum hydrocarbons as gasoline-, diesel-, and motor oil (TPHg, TPHd, and TPHmo, respectively) by U.S. Environmental Protection Agency (EPA) Method 8015;
- Volatile organic compounds (VOCs) by EPA Method 8260B;
- Organochlorine pesticides by EPA Method 8081;
- Title 22 metals (17 metals) by EPA Method 6010A; and
- California Waste Extraction Test (CA-WET) analysis for the metal chromium.

The soil sample was transported in a chilled cooler under standard chain-of-custody protocols to Torrent Analytical Laboratory in Milpitas, California, a laboratory certified by the California Department of Health Services Environmental Laboratory Accreditation Program, which performed the required analyses on an accelerated laboratory turnaround.

Because high concentrations of the metals lead and chromium are common in soil from this area of Santa Clara and often exceed the Class II landfill Soluble Threshold Limit Concentration (STLC) acceptance criteria, the sample was submitted for analysis by the CA-WET method at the time of sample submission. Analysis for soluble metals by the CA-WET method is required if one or more of the total metal concentrations exceeds the nonhazardous landfill screening criteria (i.e., 10 times the STLC). The soluble fraction from the CA-WET method defines the hazardous-versus-nonhazardous waste classification for the soil. Only chromium was detected at a concentration exceeding its STLC by 10 times in the soil sample and required further analysis using the CA-WET method to classify the waste. The soil sample passed the CA-WET test determining the soil to be nonhazardous and required no additional TCLP analysis. Analytical results are discussed in detail below.

SOIL ANALYTICAL RESULTS

A summary of the sample analytical results is discussed in the context of the San Francisco Bay Water Board (Water Board) Environmental **Screening** Levels (ESLs) for commercial land use and construction worker direct-exposure risk. Table 1 summarizes the analytical results of compounds detected in the sample analyzed during the investigation. The certified analytical laboratory report and Chain of Custody forms are provided in Attachment A.

TOTAL PETROLEUM HYDROCARBONS

TPH_{mo} was detected at a concentration of 14.8 milligrams per kilogram (mg/kg) in the soil sample. TPH_d was detected at a concentration of 2.02 mg/kg in the soil sample. TPH_g was not detected in the soil sample. All detected contaminant concentrations and laboratory reporting limits were less than the commercial land use and construction/trench worker direct-exposure ESLs.

VOLATILE ORGANIC COMPOUNDS

VOCs were not detected in the soil sample. All laboratory reporting limits were less than commercial and construction/trench worker ESLs.

ORGANOCHLORINE PESTICIDES

Pesticides were not detected in the soil sample. All laboratory reporting limits were less than commercial and construction/trench worker ESLs.

TITLE 22 METALS

The 17 Title 22 metals were detected at concentrations within normal background ranges. Arsenic was detected at a concentration of 4.56 mg/kg, exceeding the ESL of 0.98 mg/kg for direct-

exposure risk to construction workers. Chromium was detected at a concentration of 52.5 mg/kg, exceeding the landfill screening criteria, and required an additional analysis by the CA-WET method to determine the hazardous-versus-nonhazardous waste classification for the purpose of off-Site disposal.

California Waste Extraction Test Analysis Results

Chromium was not detected at a concentration exceeding the laboratory practical quantification limit of 0.02 milligrams per liter for the CA-WET analysis. Therefore, the soil would be classified as nonhazardous, based on the chromium test.

LABORATORY QUALITY CONTROL

Laboratory internal quality control procedures, including analysis of method blanks, control spikes, and surrogate spiked samples, are detailed in the laboratory analytical report provided in Attachment A.

CONCLUSIONS AND RECOMMENDATIONS

Farallon conducted this pre-excavation soil profiling to allow loading of the soil export for transport directly to the designated soil recipient and to identify any potential construction health and safety concerns with the planned excavation phase. The soil analytical data were compared to applicable Water Board ESLs for evaluation of off-Site soil disposal options and potential construction-related exposure risks, and resulted in the following conclusions:

- TPHmo and TPHd were detected at low concentrations; TPHg, VOCs, and pesticides were not detected in composite soil sample collected at the SC1 Basement area. The Title 22 metals were detected at concentrations within acceptable background ranges. All analytes were detected at concentrations less than their Water Board commercial land use ESLs and construction worker ESLs for direct-exposure risk and do not pose any restrictions for off-Site disposal.
- The analytical results indicate minimal risk of direct exposure to compounds in soil during future earthwork activity, with the exception of arsenic. The sample contained arsenic above the construction worker ESL for direct-exposure risk. Due to the concentrations of arsenic exceeding its ESL, best construction management practices such as gloves and water spray for fugitive dust control should be employed during earthwork to minimize the potential risk of exposure via dermal, ingestion, or inhalation routes.

CLOSING

Farallon appreciates the opportunity to provide environmental consulting services for this project. Please contact Henry Pietropaoli at (510) 926-9416 or Richard Makdisi at (510) 812-6314 if you have questions or comments regarding this letter report.

Sincerely,

Farallon Consulting, L.L.C.

Henry Pietropaoli, P.G.
Senior Geologist

Richard Makdisi, P.G.
Principal Geochemist

Work Order No.: 2209037 Rev: 1

Dear Henry Pietropaoli:

Torrent Laboratory, Inc. received 1 sample(s) on September 08, 2022 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

A handwritten signature in blue ink, appearing to read "Patti L Sandrock", is written over a light blue horizontal line.

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Laboratory, Inc.

Analytical Comments for method 6010B, 2209037-001 MS/MSD, QC Preparation Batch ID 1144783, Note: The % recoveries for Barium are outside of laboratory control limits but RPD is within limits. The associated LCS/LCSD is within both % Recovery and RPD limits. No corrective action required.

REVISIONS

Report revised to include STLC data

STLC

Note: Extraction of 50 g sample / 500g 0.2M Sodium Citrate Solution was performed according to wet extraction procedure (WET) which was rotated in a rotary shaker for 48 hours (+/- 4 hours).

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sa duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - mg/L and mg/Kg (equivalent to PPM - parts per million in liquid and solid), ug/L and ug/Kg (equivalent to PPB - parts per billion in liquid and solid), ug/m³ , mg/m³ , ppbv and ppmv (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), ug/Wipe (concentration found on the surface of a single Wipe usually taken over a 100cm ² surface)

LABORATORY QUALIFIERS

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Value reported with an E qualifier should be considered as estimated.
H - Indicates that the recommended holding time for the analyte or compound has been exceeded
J - Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R - The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S - Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Farallon Consulting

Date and Time Received: 9/8/2022 10:42:00AM

Project Name: SCI Basement

Received By: Lorna Imbat

Work Order No.: 2209037

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: Client Drop Off

Chain of Custody (COC) Information

Chain of custody present? Yes
Chain of custody signed when relinquished and received? Yes
Chain of custody agrees with sample labels? Yes
Custody seals intact on sample bottles? Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler? Not Present
Shipping Container/Cooler In Good Condition? Yes
Samples in proper container/bottle? Yes
Samples containers intact? Yes
Sufficient sample volume for indicated test? Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes
Container/Temp Blank temperature in compliance? No Temperature: 28.0 °C
Water-VOA vials have zero headspace? No VOA vials submitted
Water-pH acceptable upon receipt? N/A
pH Checked by: n/a pH Adjusted by: n/a

**RE: SAMPLING RESULTS – SC1 BASEMENT GROUNDWATER
INTEL CORPORATION BOWERS CAMPUS
3065 BOWERS AVENUE – SOW 625
SANTA CLARA, CALIFORNIA
FARALLON PN: 2410-004**

Dear David Jackson and David Cash:

Farallon Consulting, L.L.C. (Farallon) has prepared this letter to Intel Corporation (Intel) to document the results of the groundwater sampling services conducted on September 29, 2022 at Intel's Bowers Campus at 3065 Bowers Avenue in Santa Clara, California (herein referred to as the Site). The groundwater sampling work was conducted as an additional task requested in the email regarding Water Sampling dated September 28, 2022 from David Jackson of Intel to Henry Pietropaoli of Farallon. The additional task was not included in the proposed scope described in the letter regarding Proposal Soil Profiling and Technical Documentation in Support of Development Activity at Intel Corporation Bowers Campus, 3065 Bowers Avenue – SC1 Basement, Santa Clara, California dated August 26, 2022 from Henry Pietropaoli and Richard Makdisi of Farallon to David Jackson of Intel. The work was conducted in support of the excavation in the SC1 Basement area of the Site, which is being developed by Intel's general Site redevelopment contractor. The Site location and SC1 Basement area where the grab groundwater sample was collected are shown on Figure 1.

Farallon assumed that groundwater generated during excavation activity would be disposed of off the Site at a California-regulated recycling facility. The groundwater was tested for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and dissolved metals as an initial evaluation to support future dewatering and off-Site disposal but was not sampled to fulfill profile requirements for a National Pollutant Discharge Elimination System or publicly owned treatment works discharge permit, which typically require a broader analytical suite or are specific to evaluate known contamination, for which none is known or suspected in this area of the Bowers Campus. The analysis also is adequate to conduct an evaluation of construction-related health and safety issues.

PRE-FIELD WORK ELEMENTS

Pre-field work elements included the following:

- David Jackson of Intel provided a Site Plan showing the location of the SC1 Basement excavation area;

- Farallon prepared an updated Site-specific Health and Safety Plan for Farallon personnel regarding the sampling activity;
- Intel's Site general contractor Gilbane Building Company conducted the subsurface utility clearance prior to Farallon conducting sampling at the Site; and
- Farallon scheduled and coordinated with the analytical laboratory.

SAMPLING AND ANALYTICAL METHODS

Farallon geologist Henry Pietropaoli conducted the groundwater profile sampling on September 29, 2022. David Jackson of Intel provided access to the excavation area for the in-situ groundwater sampling. Henry Pietropaoli met with David Jackson on September 29, 2022 to inspect the project area.

The excavation in the SC1 Basement area of the Site consists of a generally flat, rectangular area approximately 6 feet by 15 feet (90 square feet) to an average depth of 2 feet below ground surface. A pothole was dug in the excavation area by Intel's subcontractor, Gilbane Building Company, to access underlying groundwater for sampling, which occurred at a depth of approximately 3.5 feet below the top of the concrete basement floor. One groundwater sample was retrieved from the pothole using a new disposable bailer and transferred to laboratory-supplied containers appropriate for the analytical methods.

ANALYTICAL METHODS

Based on the Site history of no known groundwater contamination, an analytical suite was selected for the groundwater profiling and evaluation of construction-related earthwork health and safety issues. Typically, TPH, VOCs, and dissolved metals testing is sufficient for groundwater disposal profiling, unless known historical contaminants need assessment. The groundwater sample was analyzed by the following methods:

- TPH as diesel and as motor oil (TPHd and TPHmo, respectively) by U.S. Environmental Protection Agency (EPA) Method 8015;
- TPH as gasoline (TPHg) and VOCs by EPA Method 8260B; and
- Dissolved Title 22 metals (17 metals) by EPA Method 6010A.

The groundwater sample was transported in a chilled cooler under standard chain-of-custody protocols to Torrent Analytical Laboratory in Milpitas, California, a laboratory certified by the California Department of Health Services Environmental Laboratory Accreditation Program, which performed the required analyses on an accelerated laboratory turnaround.

GROUNDWATER ANALYTICAL RESULTS

A summary of the sample analytical results is discussed in the context of the San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) for Direct Exposure Human Health Risk Levels. Table 1 summarizes the analytical results of compounds

detected in the groundwater sample. The certified analytical laboratory report and Chain of Custody forms are provided in Attachment A.

TOTAL PETROLEUM HYDROCARBONS

TPHd, TPHmo, and TPHg were not detected in the groundwater sample. All laboratory reporting limits were less than applicable direct-exposure ESLs.

VOLATILE ORGANIC COMPOUNDS

VOCs were not detected in the groundwater sample. Laboratory reporting limits or method detection limits were less than applicable direct-exposure ESLs with the exception of 1,2,3-trichloropropane, 1,2-dibromo-3-chloropropane, 1,2-dibromoethane, hexachlorobutadiene, and naphthalene where their respective laboratory method detection levels exceeded the direct-exposure ESLs.

TITLE 22 METALS

The 17 Title 22 metals were detected at concentrations within normal background ranges in the groundwater sample. Laboratory reporting limits were less than applicable direct-exposure ESLs.

LABORATORY QUALITY CONTROL

Laboratory internal quality control procedures, including analysis of method blanks, control spikes, and surrogate spiked samples, are detailed in the laboratory analytical report provided in Attachment A.

CONCLUSIONS AND RECOMMENDATIONS

Farallon conducted this groundwater profiling to identify any potential construction health and safety concerns related to potential excavation groundwater dewatering during the SC1 Basement excavation activities. The groundwater analytical data were compared to applicable San Francisco Bay Regional Water Quality Control Board ESLs for initial profile evaluation and potential construction-related exposure risks, and resulted in the following conclusions:

- Title 22 metals were detected at concentrations less than applicable direct-exposure ESLs in the groundwater sample. TPH and VOCs were not detected. Laboratory reporting limits or method detection levels were less than applicable direct-exposure ESLs with the exception of 1,2,3-trichloropropane, 1,2-dibromo-3-chloropropane, 1,2-dibromoethane, hexachlorobutadiene, and naphthalene, which exceeded their respective laboratory method detection levels. However, direct-exposure ESLs are based on conservative maximum contaminant levels (MCLs) applicable to drinking water standards, and these compounds are unlikely to impact disposal options. Any potential exposure risk would be mitigated by using Best Management Practices during handling.
- Analytical requirements for groundwater discharge using a National Pollutant Discharge Elimination System or publicly owned treatment works discharge permit would require a specific analytical suite with specific laboratory method reporting limits.

- Metals analyzed in the groundwater sample represent the dissolved fraction; recycling or treatment facilities likely would require removal or settling out of suspended sediment in the groundwater before accepting groundwater for recycling. Accumulated sediment from groundwater would be similar to the coincident SC1 Basement excavation soils generated, and these waste materials could be disposed of together. The letter regarding Pre-Excavation Soil Sampling Results – SC1 Basement, Intel Corporation Bowers Campus, 3065 Bowers Avenue, Santa Clara, California dated September 16, 2022 from Henry Pietropaoli and Richard Makdisi of Farallon to David Jackson of Intel concluded that the SC1 Basement soils were nonhazardous.

CLOSING

Farallon appreciates the opportunity to provide environmental consulting services for this project. Please contact Henry Pietropaoli at (510) 926-9416 or Richard Makdisi at (510) 812-6314 if you have questions or comments regarding this letter report.

Sincerely,

Farallon Consulting, L.L.C.

Henry Pietropaoli, P.G.
Senior Geologist

Richard Makdisi, P.G.
Principal Geochemist

Dear Henry Pietropaoli:

Torrent Laboratory, Inc. received 1 sample(s) on September 29, 2022 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - mg/L and mg/Kg (equivalent to PPM - parts per million in liquid and solid), ug/L and ug/Kg (equivalent to PPB - parts per billion in liquid and solid), ug/m³ , mg/m³ , ppbv and ppmv (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), ug/Wipe (concentration found on the surface of a single Wipe usually taken over a 100cm ² surface)

LABORATORY QUALIFIERS

<p>B - Indicates when the analyte is found in the associated method or preparation blank</p> <p>D - Surrogate is not recoverable due to the necessary dilution of the sample</p> <p>E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.</p> <p>H- Indicates that the recommended holding time for the analyte or compound has been exceeded</p> <p>J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative</p> <p>NA - Not Analyzed</p> <p>N/A - Not Applicable</p> <p>ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.</p> <p>NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added</p> <p>R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts</p> <p>S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative</p> <p>X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.</p>

**RE: PRE-EXCAVATION SOIL PROFILING AND TECHNICAL DOCUMENTATION
IN SUPPORT OF DEVELOPMENT ACTIVITY
INTEL CORPORATION BOWERS CAMPUS
3065 BOWERS AVENUE – SOW 625
SANTA CLARA, CALIFORNIA
FARALLON PN: 2410-004**

Dear David Jackson and David Cash:

Farallon Consulting, L.L.C. (Farallon) has prepared this letter to Intel Corporation (Intel) to document the results of the drilling and pre-excavation soil sampling work conducted in two planned excavation areas at Intel's Bowers Campus at 3065 Bowers Avenue in Santa Clara, California (herein referred to as the Site). Sampling was conducted as described in the letter regarding Proposal for Pre-Excavation Soil Profiling and Technical Documentation in Support of Development Activity at Intel's Bowers Campus, 3065 Bowers Avenue – SOW 625, Santa Clara, California dated September 12, 2022 from Henry Pietropaoli and Richard Makdisi of Farallon to David Jackson and David Cash of Intel. The project was conducted in support of redevelopment activities in two SOW 625 areas, located on the northwestern and southwestern sides of the SC1 building. David Jackson provided a Site plan by email on August 22, 2022 showing the dimensions of the planned excavation areas, and Henry Pietropaoli and David Jackson inspected the Site and outlined the two excavation areas in white paint on September 8, 2022. The Site location and two excavation areas are shown on Figure 1.

This in-situ soil profiling work was completed before the planned excavation phase to allow direct-loading of the soil export for transport directly to the designated soil recipient, and to identify any potential construction health and safety concerns. The profiling was done for acceptance of the soil generated during excavation to an appropriate California-regulated landfill facility, depending on the analytical results.

PRE-FIELD WORK ELEMENTS

Pre-field work elements included the following:

- A pre-construction teleconference was held among representatives of Intel, Gilbane Building Company (Gilbane), Rodan Builders, Inc. (Rodan), and Henry Pietropaoli on September 20, 2022 to discuss procedures to accomplish the sampling project.

- Farallon prepared a Site-specific Health and Safety Plan for Farallon personnel regarding the drilling and sampling activity.
- Farallon obtained the necessary sampling equipment and scheduled the analytical laboratory services.
- Farallon notified Underground Service Alert and obtained a ticket prior to drilling and sampling in the excavation areas. Intel's Site general contractor also conducted the subsurface utility clearance before Farallon conducted sampling at the Site.
- The drilling and soil sampling work was conducted under Gilbane's Site Incident Prevention Plan, and Gilbane arranged for Intel's approval and signoff by all Intel Site Incident Prevention Plan owners.

DRILLING AND SAMPLING ACTIVITIES

Drilling was conducted by Gilbane personnel, using an excavator equipped with an auger attachment, under the observation of Henry Pietropaoli, a California Professional Geologist, on September 29, 2022. The boreholes were drilled using an 8-inch-diameter solid-stem auger on which soil from the target depths was retrieved to the surface on the auger flights. Four borings were advanced to the target excavation depth in each of the northwestern and southwestern excavation areas for collection of continuous soil core. An aliquot of soil was retained from select depths from two four-point composite samples in four borings in each area. Compositing entails removing any large, obvious rocks and organic debris from the retained soil and homogenizing the mix in a clean plastic bag, followed by transferring the mix to laboratory-supplied sample containers. Soil was retained from each depth interval in each boring for potential analysis in the event that further definition might be desired due to high concentrations of contaminants in the initial composite samples. Soil cuttings observed during the drilling activity showed no indication of any contamination. Sampling equipment was decontaminated beforehand to ensure the quality of the samples collected.

The ground surface in both excavation areas slopes at an approximately 1:5 grade toward the SC1 building; thus, both excavation areas are approximately triangular-shaped when viewed to the long dimension of the excavation plan area. The top of the slope represents the greatest planned excavation thickness, which diminishes to where it ends at the existing ground surface adjacent to the base of the SC1 building. The borings extended to the full excavation depth in each boring location.

The locations of the borings and a cross section of each excavation area are shown on Figure 1.

Northwestern Excavation

The northwestern excavation area measures approximately 60 feet long by 25 feet wide (1,500 square feet), with a maximum depth of 9 feet below ground surface (bgs), and excavation will generate approximately 277 cubic yards of soil, which is planned for off-Site disposal. Four borings (B1, B2, B3, and B4) were located in evenly spaced locations across the northwestern

excavation area. For the estimated 277-cubic-yard soil volume, Farallon made two soil composite samples: one composite sample (sample BN 0-4 COMP) composed of soil collected from four borings from depth intervals of 1 to 2 and 2 to 4 feet bgs; and one composite sample (sample BN 5-9 COMP) composed of soil collected from four borings from depth intervals of 5 to 7 and 8 to 10 feet bgs, the maximum excavation depth.

Soil encountered during drilling consisted of dark brown to grey clayey silt from the ground surface to a depth of approximately 4 feet bgs graded into a notably distinct olive green to light grey clayey silt that extended to the full boring and excavation depth of 9 feet bgs.

Southwestern Excavation

The southwestern excavation plan area measures approximately 105 feet long by 30 feet wide (3,150 square feet), with a maximum depth of 6 feet bgs, and excavation will generate approximately 350 cubic yards of soil, which is planned for off-Site disposal. Four borings (B5, B6, B7, and B8) were located in evenly spaced locations across the southwestern excavation area. For the estimated 350-cubic-yard soil volume, Farallon made two soil composite samples: one composite sample (sample BS 0-3 COMP) composed of soil collected from four borings from depth intervals of 1 and 3 feet bgs; and one composite sample (sample BS 4-6 COMP) composed of soil collected from four borings from depth intervals of 4 and 6 feet bgs, the maximum excavation depth.

Similar to the northwestern excavation area, soil in the southwestern area encountered during drilling consisted of dark brown to grey clayey silt from the ground surface to a depth of approximately 3.5 feet bgs graded into a notably distinct olive green to light grey clayey silt that extended to the full boring and excavation depth of 6 feet bgs.

SAMPLE ANALYTICAL METHODS

Based on the Site history and input from Dawn Addonizio, Intel Corporation Senior Environmental Health and Safety Operations Environmental Engineer, the analytical suite below was selected for the soil profiling and evaluation of construction-related earthwork health and safety issues. The soil analyses are based on common regional contaminants and not on any suspected localized contamination. There is no contamination source known or suspected in the excavation areas and no identified source of immediate off-Site contamination that could impact the Site; therefore, the sampling and analytical scheme required no particular bias and followed standard California-regulated landfill acceptance requirements. The soil samples were analyzed by the following methods:

- Total petroleum hydrocarbons (TPH) as gasoline-range organics (TPHg) by U.S. Environmental Protection Agency (EPA) Method 8015;
- TPH as diesel- and motor oil-range organics (TPHd and TPHmo, respectively) by EPA Method 8015;

- Volatile organic compounds (VOCs) by EPA Method 8260, including the petroleum-related VOCs benzene, toluene, ethylbenzene, and xylenes;
- Organochlorine pesticide compounds by EPA Method 8081;
- Title 22 metals (17 metals) by EPA Method 6010A;
- Additional California Waste Extraction Test (CA-WET) analyses of two samples for the metals chromium and lead; and
- Additional toxicity characteristic leaching procedure (TCLP) analysis of two samples for the metal lead.

Soil samples were placed and securely sealed in the appropriate laboratory-supplied containers, labeled, placed in a chilled cooler, and transported under chain-of-custody protocol to Torrent Analytical Laboratory in Milpitas, California, a laboratory certified by the California Department of Health Services, Environmental Laboratory Accreditation Program to perform the required analyses. Samples were submitted for analysis on a 24-hour turnaround to meet construction schedules; however, laboratory equipment problems delayed the turnaround to approximately 7 days.

Analysis for soluble metals by the CA-WET method is required if one or more of the total metal concentrations exceeds the nonhazardous landfill screening criteria (i.e., 10 times the soluble threshold limit concentration [STLC]). The soluble fraction from the CA-WET method defines the hazardous-versus-nonhazardous waste classification for the soil. Because high concentrations of the metals lead and chromium are common in soil from this area of Santa Clara and often exceed the Class II landfill STLC acceptance criteria, Farallon instructed the laboratory to begin the 48-hour CA-WET extraction to save time by eliminating the wait for the initial results before beginning the CA-WET analysis, if needed. Chromium and lead were detected at concentrations exceeding their STLCs by 10 times in two soil samples and required further analysis using the CA-WET method to classify the waste. The two soil samples (BN 0-4 COMP and BS 0-3 COMP) passed the CA-WET test for chromium but failed the CA-WET test for lead, determining the soil to be hazardous. Both samples subsequently required additional analysis for lead, by TCLP, to determine whether additional Resource Conservation and Recovery Act (RCRA)-regulated soil management would be required by the landfill. Both soil samples passed the TCLP test for lead, and thus the soil is classified as non-RCRA-hazardous waste, and additional RCRA waste management is not required. Analytical results are discussed in detail below.

LABORATORY QUALITY CONTROL

Laboratory internal quality control procedures, including analysis of method blanks, control spikes, and surrogate spiked samples, are detailed in the laboratory analytical report provided in Attachment A.

SOIL ANALYTICAL RESULTS

A summary of the sample analytical results is discussed in the context of the California State Water Resources Control Board (Water Board) commercial Environmental Screening Levels (ESLs), which are the regulatory guidance criteria applied for soil export and disposal to regulated landfill facilities and the Water Board commercial and construction/trench worker ESLs for direct-exposure risk. Tables 1 and 2 summarize the analytical results of compounds detected in samples analyzed in the northwestern and southwestern excavation areas, respectively. The certified analytical laboratory reports and Chain of Custody forms for each excavation area are provided in Attachment A.

For clarity, the analytical results of the northwestern and southwestern excavation areas are discussed separately in the following sections.

NORTHWESTERN EXCAVATION

Soil in the planned excavation area located on the northwestern side of the SC1 facility building, represented by composite samples BN O-4 COMP and BN 5-9 COMP, is discussed below.

Total Petroleum Hydrocarbons

TPHd were detected in both samples at concentrations ranging from 2.57 to 3.81 milligrams per kilogram (mg/kg), which is less than commercial and construction/trench worker ESLs for direct-exposure risk. TPHmo were detected in both samples at concentrations ranging from 5.19 to 18.8 mg/kg. TPHg were not detected at concentrations exceeding the laboratory reporting limit in any of the soil samples. All concentrations were less than levels of regulatory concern or that would affect most off-Site landfill disposal options or pose a risk to construction/trench workers under a direct-exposure scenario.

Volatile Organic Compounds

VOCs were not detected at concentrations exceeding the laboratory reporting limit in the soil sample. All laboratory reporting limits were less than commercial and construction/trench worker ESLs for direct-exposure risk.

Organochlorine Pesticides

Trace concentrations of pesticides were detected in both samples analyzed, but no concentrations exceeded commercial and construction/trench worker ESLs for direct-exposure risk.

Title 22 Metals

Analytical results indicated that the 17 Title 22 metals were within normal ranges except for arsenic, chromium, and lead. Arsenic was detected at concentrations ranging from 4.24 to 32.6 mg/kg, exceeding the ESL for direct-exposure risk to construction/trench workers in both composite samples (BN 0-4 COMP and BN 5-9 COMP), and was greater than the California

background concentration of 11 mg/kg that is currently used by the Water Board for land use evaluation only in sample BN 0-4 COMP.

Chromium was detected at a concentration of 54.5 mg/kg in sample BN O-4 COMP, exceeding the landfill screening criteria, and required an additional analysis by the CA-WET method to determine the hazardous-versus-nonhazardous waste classification for the purpose of off-Site disposal.

Lead was detected at a concentration of 93.5 mg/kg in sample BN O-4 COMP, exceeding the landfill screening criteria, and required an additional analysis by the CA-WET method to determine the hazardous-versus-nonhazardous waste classification for the purpose of off-Site disposal.

California Waste Extraction Test Analysis Results

Chromium was not detected at a concentration exceeding the laboratory practical quantification limit of 0.02 milligram per liter (mg/l) for the CA-WET analysis. Therefore, the soil would be classified as nonhazardous, based on the chromium test.

The results of the CA-WET test for lead showed a solute concentration of 5.49 mg/l. A concentration of lead at or exceeding 5 mg/l designates the soil classification as hazardous waste. Therefore, the soil represented by this sample is classified as hazardous waste in California, based on the CA-WET test results, and must be disposed of at a regulated Class I Hazardous Landfill facility if moved off the Site. In addition, follow-on testing using the TCLP for lead was performed, as required, to determine whether the soil would be classified as California hazardous waste or RCRA-defined waste that requires additional preparation by the landfill.

Toxicity Characteristic Leaching Procedure for Lead

A TCLP test for lead was performed on composite sample BN O-4 COMP. The sample passed the TCLP test (with a solute containing less than 5 mg/l lead) that determines whether the represented soil would be classified as RCRA waste.

Soil from depths of 0 to 4 feet bgs, represented by sample BN 0-4 COMP, showed elevated lead concentrations that define it as hazardous waste and distinguish it from the deeper soil collected from depths of 5 to 9 feet bgs, represented by sample BN 5-9 COMP, and is nonhazardous.

SOUTHWESTERN EXCAVATION

Soil in the planned excavation area located on the southwestern side of the SC1 facility building, represented by composite samples BS O-3 COMP and BS 4-6 COMP, is discussed below.

Total Petroleum Hydrocarbons

TPHd were detected in both samples at concentrations ranging from 5.74 to 6.94 mg/kg. TPHmo were detected in both samples at concentrations ranging from 28.9 to 31.9 mg/kg. TPHg were not detected at concentrations exceeding the laboratory reporting limit in either of the two soil samples.

All detected contaminant concentrations and laboratory reporting limits were less than the commercial and construction/trench worker direct-exposure ESLs.

Volatile Organic Compounds

VOCs were not detected at concentrations exceeding the laboratory reporting limit in the soil sample. All laboratory reporting limits were less than commercial and construction/trench worker ESLs for direct-exposure risk.

Organochlorine Pesticides

Trace concentrations of pesticides were detected in one of the two samples analyzed, but no concentrations exceeded commercial and construction/trench worker ESLs for direct-exposure risk.

Title 22 Metals

Analytical results indicated that the 17 Title 22 metals were within normal ranges except for arsenic, chromium, and lead. Arsenic was detected at concentrations ranging from 4.11 to 29.5 mg/kg, exceeding the ESL for direct-exposure risk to construction/trench workers in both composite samples. Arsenic was greater than the California background concentration of 11 mg/kg that is currently used by the Water Board for commercial land use evaluation in sample BS O-3 COMP.

Chromium was detected at a concentration of 50.5 mg/kg in sample BS O-3 COMP, exceeding the landfill screening criteria, and required an additional analysis by the CA-WET method to determine the hazardous-versus-nonhazardous waste classification for the purpose of off-Site disposal.

Lead was detected at a concentration of 101 mg/kg in sample BS O-3 COMP, exceeding the landfill screening criteria, and required an additional analysis by the CA-WET method to determine the hazardous-versus-nonhazardous waste classification for the purpose of off-Site disposal.

California Waste Extraction Test Analysis Results

Chromium was not detected at a concentration exceeding the laboratory practical quantification limit of 0.02 mg/l for the CA-WET analysis. Therefore, the soil would be classified as nonhazardous, based on the chromium test.

The results of the CA-WET test for lead showed a solute concentration of 5.03 mg/l. A concentration of lead at or exceeding 5 mg/l designates the soil classification as hazardous waste. Therefore, the soil represented by this sample is classified as hazardous waste in California, based on the CA-WET test results, and must be disposed of at a regulated Class I Hazardous Landfill facility if moved off the Site. In addition, follow-on testing using the TCLP for lead was performed, as required, to determine whether the soil would be classified as California hazardous waste or RCRA-defined waste that requires additional preparation by the landfill.

Toxicity Characteristic Leaching Procedure for Lead

A TCLP test for lead was performed on composite sample BS 0-3 COMP. The sample passed the TCLP test (with a solute containing less than 5 mg/l lead) that determines whether the represented soil would be classified as RCRA waste.

Soil from depths of 0 to 3 feet bgs, represented by sample BS 0-3 COMP, showed elevated lead concentrations that define it as hazardous waste and distinguish it from the deeper soil collected from depths of 4 to 6 feet bgs, represented by sample BS 4-6 COMP, and is nonhazardous.

CONCLUSIONS AND RECOMMENDATIONS

Farallon conducted this pre-excavation soil profiling to allow loading of the soil export for transport directly to the designated soil recipient and to identify any potential construction health and safety concerns with the planned excavation phase. The soil analytical data were compared with applicable Water Board ESLs for evaluation of off-Site soil disposal options and potential construction-related exposure risks, and resulted in the following conclusions:

- The composite soil sample results in both the northwestern and southwestern excavation areas showed minor detections of TPH_{mo}, TPH_d, and pesticides at concentrations less than Water Board commercial land use and construction/trench worker direct-exposure ESLs, and no detections of TPH_g or VOCs. The concentrations of the detected analytes do not pose any restrictions for off-Site disposal.
- The shallow soils in the northwestern excavation area represented by sample BN 0-4 COMP, and in the southwestern excavation area represented by sample BS 0-3 COMP both failed the CA-WET analysis for lead, but both passed the TCLP test, and thus the soil is classified as non-RCRA-hazardous waste and must be disposed of at a regulated Class I hazardous landfill facility.
- The deeper soils in the northwestern excavation area represented by sample BN 5-9 COMP, and southwestern excavation soil represented by sample BS 4-6 COMP showed no contaminants at concentrations exceeding Water Board commercial land use and construction/trench worker direct-exposure ESLs, and do not pose any restrictions for off-Site disposal and could be disposed of at a regulated Class II nonhazardous landfill facility, if care during excavation was taken to segregate the soils from the overlying hazardous soils as described in the following bulleted paragraph.
- Shallow soil in both excavation areas were determined to be hazardous waste based on analytical results of lead; this includes the northwestern area soil from depths of 0 to 4 feet bgs, represented by sample BN 0-4 COMP; and the southwestern area soil from depths of 0 to 3 feet bgs, represented by sample BS 0-3 COMP. These shallow hazardous soils found in both areas consist of dark brown to grey clayey silt and can be distinguished at depth from the notably distinct olive green to light grey clayey silt soils that were determined to be nonhazardous. Therefore, as a landfill disposal cost-saving measure, the upper shallow soil in each of the excavation areas could be scraped off carefully, with a spotter monitoring

the process, and segregated for hazardous waste disposal to a Class I landfill facility, and the deeper soil disposed of at a lesser cost to a Class II nonhazardous landfill facility, as described below and shown on the excavation cross-section insets on Figure 1.

- The northwestern excavation plan area measures approximately 60 feet long by 25 feet wide (1,500 square feet), with a maximum depth of 9 feet bgs, and will generate approximately 277 cubic yards of soil for off-Site disposal. The deeper soil from 4.5 feet bgs in the highest area of the slope to the 9-foot excavation base depth could comprise up to two-thirds (185 cubic yards) of the 277-cubic-yard volume and potentially be disposed of as nonhazardous waste.
- The southwestern excavation plan area measures approximately 105 feet long by 30 feet wide (3,150 square feet), with a maximum depth of 6 feet bgs, and will generate approximately 350 cubic yards of soil for off-Site disposal. The deeper soil from 3.5 feet bgs in the highest area of the slope to the 6-foot excavation base depth could comprise up to two-thirds (233 cubic yards) of the 350-cubic-yard volume and potentially be disposed of as nonhazardous waste.
- The analytical results indicate minimal risk of direct exposure to compounds in soil during future earthwork activity, with the exception of arsenic. Arsenic concentrations exceeded the construction/trench worker ESL for direct-exposure risk in all samples. Due to the occurrence of arsenic in soil at concentrations exceeding the ESL for direct-exposure risk to construction/trench workers, best construction management practices such as gloves and water spray for fugitive dust control should be employed during earthwork to minimize the potential risk of exposure via dermal, ingestion, or inhalation routes.

Farallon appreciates the opportunity to provide environmental consulting services for this project. Please contact Henry Pietropaoli at (510) 926-9416 or Richard Makdisi at (510) 812-6314 if you have questions or comments regarding this letter report.

Sincerely,

Farallon Consulting, L.L.C.

RE: Intel Corp 3065 Bowers Ave, Santa Clara, CA

Work Order No.: 2209262 Rev: 2

Dear Henry Pietropaoli:

Torrent Laboratory, Inc. received 2 sample(s) on September 29, 2022 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

A handwritten signature in blue ink that reads "Kathie Evans". The signature is written in a cursive style and is positioned above a horizontal line.

Kathie Evans
Project Manager

Date

Date: 10/11/2022

Client: Farallon Consulting

Project: Intel Corp 3065 Bowers Ave, Santa Clara, CA

Work Order: 2209262

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Laboratory, Inc.

REVISIONS

Report revised to include STLC data

STLC

Note: Extraction of 50 g sample / 500g 0.2M Sodium Citrate Solution was performed according to wet extraction procedure (WET) which was rotated in a rotary shaker for 48 hours (+/- 4 hours).

Date Prepared: 10/1/22 at 10:45 AM to 10/3/22 at 9:00 AM

Rev. 1 (10/11/22)

Report revised to include TCLP data

TCLP

Note: Extraction of 100 g sample/2000 g TCLP Fluid #1 was performed according to Toxicity Characteristic Leaching Procedure (SW-846 1311TCLP) which was rotated in a rotary shaker @ 32 RPM for 18 hours (+/- 2 hours).

Date Prepared: 10/12/22 at 6:15 PM to 10/13/22 at 10:30 AM

Rev. 2 (10/14/22)

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - mg/L and mg/Kg (equivalent to PPM - parts per million in liquid and solid), ug/L and ug/Kg (equivalent to PPB - parts per billion in liquid and solid), ug/m³ , mg/m³ , ppbv and ppmv (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), ug/Wipe (concentration found on the surface of a single Wipe usually taken over a 100cm ² surface)

LABORATORY QUALIFIERS

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H - Indicates that the recommended holding time for the analyte or compound has been exceeded
J - Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R - The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S - Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Farallon Consulting

Date and Time Received: 9/29/2022 12:30:00PM

Project Name: Intel Corp 3065 Bowers Ave, Santa Clara, CA

Received By: ke

Work Order No.: 2209262

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: Client Drop Off

Chain of Custody (COC) Information

Chain of custody present? Yes
Chain of custody signed when relinquished and received? Yes
Chain of custody agrees with sample labels? Yes
Custody seals intact on sample bottles? Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler? Not Present
Shipping Container/Cooler In Good Condition? Yes
Samples in proper container/bottle? Yes
Samples containers intact? Yes
Sufficient sample volume for indicated test? Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes
Container/Temp Blank temperature in compliance? No Temperature: 17.0 °C
Water-VOA vials have zero headspace? No VOA vials submitted
Water-pH acceptable upon receipt? N/A
pH Checked by: n/a pH Adjusted by: n/a

RE: Intel Corp 3065 Bowers Ave, Santa Clara, CA

Work Order No.: 2209261 Rev: 1

Dear Henry Pietropaoli:

Torrent Laboratory, Inc. received 2 sample(s) on September 29, 2022 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

A handwritten signature in blue ink that reads "Kathie Evans". The signature is written in a cursive style and is positioned above a horizontal line.

Kathie Evans
Project Manager

October 06, 2022

Date

Date: 10/6/2022

Client: Farallon Consulting

Project: Intel Corp 3065 Bowers Ave, Santa Clara, CA

Work Order: 2209261

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Laboratory, Inc.

Analytical Comment for method 8015B, QC Preparation Batch ID 1145409, Note: The % recovery for Pentacosane in the LCS is outside of laboratory control limits (high bias). All samples were Non Detect for those compounds associated with the LCS/LCSD. No corrective action is required.

REVISIONS

Report revised to include STLC and TCLP data

STLC

Note: Extraction of 50 g sample / 500g 0.2M Sodium Citrate Solution was performed according to wet extraction procedure (WET) which was rotated in a rotary shaker for 48 hours (+/- 4 hours).

Date Prepared: 10/1/22 at 10:45 AM to 10/3/22 at 9:00 AM

TCLP

Note: Extraction of 100 g sample/2000 g TCLP Fluid #1 was performed according to Toxicity Characteristic Leaching Procedure (SW-846 1311TCLP) which was rotated in a rotary shaker @ 32 RPM for 18 hours (+/- 2 hours).

Date Prepared: 10/10/22 at 6:15 PM to 10/11/22 at 11:15 AM

Rev. 1 (10/13/22)

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - mg/L and mg/Kg (equivalent to PPM - parts per million in liquid and solid), ug/L and ug/Kg (equivalent to PPB - parts per billion in liquid and solid), ug/m3 , mg/m3 , ppbv and ppmv (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), ug/Wipe (concentration found on the surface of a single Wipe usually taken over a 100cm ² surface)

LABORATORY QUALIFIERS

<p>B - Indicates when the analyte is found in the associated method or preparation blank</p> <p>D - Surrogate is not recoverable due to the necessary dilution of the sample</p> <p>E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.</p> <p>H- Indicates that the recommended holding time for the analyte or compound has been exceeded</p> <p>J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative</p> <p>NA - Not Analyzed</p> <p>N/A - Not Applicable</p> <p>ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.</p> <p>NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added</p> <p>R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts</p> <p>S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative</p> <p>X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.</p>

Sample Receipt Checklist

Client Name: Farallon Consulting

Date and Time Received: 9/29/2022 12:30:00PM

Project Name: Intel Corp 3065 Bowers Ave.Santa Clara,CA

Received By: ke

Work Order No.: 2209261

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: Client Drop Off

Chain of Custody (COC) Information

Chain of custody present? Yes
Chain of custody signed when relinquished and received? Yes
Chain of custody agrees with sample labels? Yes
Custody seals intact on sample bottles? Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler? Not Present
Shipping Container/Cooler In Good Condition? Yes
Samples in proper container/bottle? Yes
Samples containers intact? Yes
Sufficient sample volume for indicated test? Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes
Container/Temp Blank temperature in compliance? No Temperature: 17.0 °C
Water-VOA vials have zero headspace? No VOA vials submitted
Water-pH acceptable upon receipt? N/A
pH Checked by: n/a pH Adjusted by: n/a

APPENDIX F – BORING LOGS

PROJECT NAME SC1 Central Utility Building (CUB)
PROJECT NUMBER 864-2-1
PROJECT LOCATION 3065 Bowers Avenue, Santa Clara, CA
DATE STARTED 1/27/23 **DATE COMPLETED** 1/27/23
GROUND ELEVATION _____ **BORING DEPTH** 15 ft.
DRILLING CONTRACTOR Penecore
LATITUDE _____ **LONGITUDE** _____
DRILLING METHOD Geoprobe 6712DT, Direct Push
GROUND WATER LEVELS:
LOGGED BY BMP ▽ **AT TIME OF DRILLING** 11 ft.
NOTES _____ ▼ **AT END OF DRILLING** 9 ft.

This log is a part of a report by Cornerstone Earth Group, and should not be used as a stand-alone document. This description applies only to the location of the exploration at the time of drilling. Subsurface conditions may differ at other locations and may change at this location with time. The description presented is a simplification of actual conditions encountered. Transitions between soil types may be gradual.

APPENDIX G – LABORATORY ANALYTICAL REPORTS

Cornerstone Earth Group
1259 Oakmead Parkway
Sunnyvale, California 94035
Tel: (408) 245-4600
Fax: (408) 245-4620
RE: SC1 Central Utility Bldg (CUB)

Work Order No.: 2301215

Dear Michael Chang:

Torrent Laboratory, Inc. received 4 sample(s) on January 27, 2023 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

A handwritten signature in blue ink that reads "Kathie Evans". The signature is written in a cursive style and is positioned above a horizontal line.

Kathie Evans
Project Manager

February 02, 2023

Date

Date: 2/2/2023

Client: Cornerstone Earth Group

Project: SC1 Central Utility Bldg (CUB)

Work Order: 2301215

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Laboratory, Inc.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - mg/L and mg/Kg (equivalent to PPM - parts per million in liquid and solid), ug/L and ug/Kg (equivalent to PPB - parts per billion in liquid and solid), ug/m³ , mg/m³ , ppbv and ppmv (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), ug/Wipe (concentration found on the surface of a single Wipe usually taken over a 100cm ² surface)

LABORATORY QUALIFIERS

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H - Indicates that the recommended holding time for the analyte or compound has been exceeded
J - Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R - The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S - Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Work Order No.: 2301219 Rev. 1

Dear Michael Chang:

Torrent Laboratory, Inc. received 21 sample(s) on January 27, 2023 for the analyses presented in the following Report.

Six samples are on hold.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

A handwritten signature in blue ink that reads "Kathie Evans". The signature is written in a cursive style and is positioned above a horizontal line.

Work Order: 2301219

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Laboratory, Inc.

Data is reported on a dry weight basis.

Asbestos analysis was sub-contracted to Asbestos TEM. Sub-contract data will follow under a separate cover.

Analytical Comments for method 8081B, 2301219-002A MS/MSD, QC Preparation Batch ID 1148290, Note: The % recoveries for Dieldrin, Endrin and 4,4'-DDT are outside of laboratory control limits but % RPDs are within limits. The associated LCS/LCSD is within both % Recovery and % RPD limits. No corrective action required.

Analytical Comments for method 6010B, 2301219-001A MS/MSD, QC Preparation Batch ID 1148327, Note: The % recoveries for Barium and Chromium are outside of laboratory control limits but % RPDs are within limits. The associated LCS/LCSD is within both % Recovery and % RPD limits. No corrective action required.

The spikes in the MS/MSD for Nickel are not recoverable. The sample concentration is greater than 4X the spike concentration. No corrective action is required.

REVISIONS

Report revised to include sub-contracted Asbestos data. Sub-contract data appears as an attachment to the Torrent generated report.

Rev. 1 (2/7/23)

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - mg/L and mg/Kg (equivalent to PPM - parts per million in liquid and solid), ug/L and ug/Kg (equivalent to PPB - parts per billion in liquid and solid), ug/m³ , mg/m³ , ppbv and ppmv (all units of measure for reporting concentrations in air), % (equivalent to 10000 ppm or 1,000,000 ppb), ug/Wipe (concentration found on the surface of a single Wipe usually taken over a 100cm ² surface)

LABORATORY QUALIFIERS

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H - Indicates that the recommended holding time for the analyte or compound has been exceeded
J - Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R - The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S - Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Cornerstone Earth Group

Date and Time Received: 1/27/2023 3:07:00PM

Project Name: SC1 Central Utility Bldg (CUB)

Received By: Lorna Imbat

Work Order No.: 2301219

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: Client Drop Off

Chain of Custody (COC) Information

Chain of custody present? Yes
Chain of custody signed when relinquished and received? Yes
Chain of custody agrees with sample labels? Yes
Custody seals intact on sample bottles? Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler? Not Present
Shipping Container/Cooler In Good Condition? Yes
Samples in proper container/bottle? Yes
Samples containers intact? Yes
Sufficient sample volume for indicated test? Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time? Yes
Container/Temp Blank temperature in compliance? Yes Temperature: 5.0 °C
Water-VOA vials have zero headspace? No VOA vials submitted
Water-pH acceptable upon receipt? N/A
pH Checked by: n/a pH Adjusted by: n/a

RE: LABORATORY JOB # 1244-00178
Polarized light microscopy analytical results for 1 bulk sample(s).
Job Site:
Job No.:

Enclosed please find the bulk material analytical results for one or more samples submitted for asbestos analysis. The analyses were performed in accordance with the California Air Resources Board (ARB) Method 435 for the determination of asbestos in serpentine aggregate samples.

Prior to analysis, samples are logged-in and all data pertinent to the sample recorded. The samples are checked for damage or disruption of any chain-of-custody seals. A unique laboratory ID number is assigned to each sample. A hard copy log-in sheet containing all pertinent information concerning the sample is generated. This and all other relevant paper work are kept with the sample throughout the analytical procedures to assure proper analysis.

Sample preparation follows a standard CARB 435 prep method. The entire sample is dried at 135-150 C and then crushed to ~3/8" gravel size using a Bico Chipmunk crusher. If the submitted sample is >1 pint, the sample was split using a 1/2" riffle splitter following ASTM Method C-702-98 to obtain a 1 pint aliquot. The entire 1 pint aliquot, or entire original sample, is then pulverized in a Bico Braun disc pulverizer calibrated to produce a nominal 200 mesh final product. If necessary, additional homogenization steps are undertaken using a 3/8" riffle splitter. Small aliquots are collected from throughout the pulverized material to create three separate microscope slide mounts containing the appropriate refractive index oil. The prepared slides are placed under a polarizing light microscope where standard mineralogical techniques are used to analyze the various materials present, including asbestos. If asbestos is identified and of less than 10% concentration by visual area estimate then an additional five sample mounts are prepared. Quantification of asbestos concentration is obtained using the standard CAL ARB Method 435 point count protocol. For samples observed to contain visible asbestos of less than 10% concentration, a point counting technique is used with 50 points counted on each of eight sample mounts for a total of 400 points. The data is then compiled into standard report format and subjected to a thorough quality assurance check before the information is released to the client.

While the CARB 435 method has much to commend it, there are a number of situations where it fails to provide sufficient accuracy to make a definitive determination of the presence/absence of asbestos and/or an accurate count of the asbestos concentration present in a given sample. These problems include, but are not limited to, 1) statistical uncertainty with samples containing <1% asbestos when too few particles are counted, 2) definitive identification and discrimination between various fibrous amphibole minerals such as tremolite/actinolite/hornblende and the "Libby amphiboles" such as tremolite/winchite/richterite/arfvedsonite, and C) small asbestiform fibers which are near or below the resolution limit of the PLM microscope such as those found in various California coast range serpentine bodies. In these cases, further analysis by transmission electron microscopy is recommended to obtain a more accurate result.

Sincerely Yours,

Lab Manager
ASBESTOS TEM LABORATORIES, INC.
