Mr. Sam Salim  
Riverside XC, LLC  
3010 Old Ranch Parkway, Suite 470  
Seal Beach, California 90740

**Subject:** Phase II Environmental Site Assessment  
2830, 11190, and 11258 South Riverside Avenue in Bloomington, California

Dear Mr. Salim:

This summary report presents the results of a Phase II Environmental Site Assessment (ESA) conducted at the properties located at 2830, 11190, and 11258 South Riverside Avenue in Bloomington, California (the Site; Figure 1).

#### **BACKGROUND**

Hazard Management Consulting, Inc. (HMC) was previously retained to prepare a Phase I ESA as part of real estate due diligence activities for Xebec Realty. The Site was historically vacant until the 1950's, when the historical records show that residential development was present in the northeast corner. In the 1980's, industrial activities were noted at the 2830 and 11258 parcels including vehicle storage and scrap vehicle/material storage, respectively. Dark areas were observed on unpaved land around the areas of storage. Since that time, observations and records indicate industrial uses including transport, construction, and material recycling. Given the observations of dark stains and past uses, the industrial history of the Site is considered a Recognized Environmental Condition (REC).

In the areas surrounding the Site, the earliest records indicate vacant and/or agricultural land use. Industrial development was first noted in the vicinity during the 1950's. An aboveground storage tank (AST) farm was noted at an adjacent parcel to the north. The nearby Colton Terminal ASTs were first seen in 1989, about a half mile north of the Site. Based on the review of the available regulatory information, facilities in the Site vicinity were noted to use and store chemicals and generate associated wastes. Releases were noted at several upgradient facilities that had leaking underground storage tank (UST) cases that were subsequently cleaned up and closed with an oversight agency. The Colton Terminal is still an open case with releases that have affected groundwater and a groundwater monitoring well associated with the case was identified at the Site during the Phase I.

RECs identified during the Phase I ESA were generally related to the industrial history of the Site, current uses resulting in spills and staining, and off-Site facilities that could potentially impact the Site. In response

Sam Salim

Phase II Environmental Site Assessment

to the identified RECs, HMC recommended that a Phase II ESA soil and soil vapor investigation be conducted. This report summarizes the results of the investigation.

## **OBJECTIVE**

The objective of the work summarized herein was to conduct subsurface soil and soil vapor testing to evaluate whether significant releases of hazardous substances, including volatile organic compounds (VOCs), petroleum hydrocarbons, and metals, have occurred at the Site. Potential releases were evaluated assuming that the Site would be developed for commercial/industrial land use.

## **DATA EVALUATION CRITERIA**

Data collected as part of the Phase II ESA were evaluated against several commonly used criteria in California. Currently, there are no generally applicable universal standards for environmental data similar to that collected as part of this investigation. Available criteria exist for specific scenarios or uses including future land use and to assess whether the sampled material will need to be removed from the Site for disposal purposes. The following soil and soil vapor criteria were used to evaluate the data.

### **Soil Criteria**

Soil sampling results were compared to State and Federal screening levels to assess whether detectable concentrations would present a possible human health risk to commercial/industrial occupants and the environment. Laboratory analytical results were compared to the following criteria:

- California Department of Toxic Substances Control (DTSC) Soil Screening Levels for commercial/industrial land use (DTSC-SLi);
- U.S. Environmental Protection Agency (EPA) Region 9 Regional Screening Levels for commercial/industrial land use (EPA-RSLi); and
- San Francisco Bay RWQCB (SFBRWQCB) Environmental Screening Levels for commercial/industrial shallow soils for direct exposure human health risk (SFBRWQCB-ESLi).

The DTSC-SLi, EPA-RSLi, and SFBRWQCB-ESLi screening values and guidelines referenced in Table 1 of this report provide human health risk criteria based on dermal contact, ingestion, and inhalation of VOCs.

The Los Angeles Regional Water Quality Control Board (LARWQCB) has developed guidelines to evaluate hydrocarbons in soil for the protection of groundwater broken down by carbon chain. The groundwater in the vicinity of the Site has been reported at approximately 80 to 110 feet below ground surface (bgs). The following LARWQCB criteria apply to the Site and are also referenced in Table 1:

- Gasoline range hydrocarbons: 500 parts per million (ppm)

Sam Salim

Phase II Environmental Site Assessment

2830, 11190, and 11258 South Riverside Avenue in Bloomington, California

April 25, 2022

Page 3

---

- Diesel range hydrocarbons: 1,000 ppm
- Oil range hydrocarbons: 10,000 ppm

Metals are naturally occurring within soil and sediments. With the exception of arsenic, concentrations were compared to the human health risk criteria set forth in DTSC-SLi, EPA-RSLi, and SFBRWQCB-ESLi screening values as presented in Table 2. Due to the granitic nature of California geology, natural background concentrations of arsenic typically exceed the human health risk guidelines prepared by the State and Federal agencies. The DTSC completed a study of naturally occurring concentrations of arsenic that would be acceptable to school properties for the Los Angeles Unified School District. Based on this study, the DTSC concluded that arsenic concentrations exceeding 12 milligrams per kilogram (mg/kg) would be considered elevated and above background levels observed locally. Table 2 also includes the published background values for metals.

#### *Soil Vapor Criteria*

The DTSC has established screening levels for ambient air at commercial/industrial properties based on human health risk criteria. Subsurface soil vapor screening levels (DTSC-SLi) were calculated by dividing the published ambient air screening level concentrations using a DTSC-recommended attenuation factor of 0.03 (33 to 1). The SFBRWQCB provides screening levels for ambient air, sub-slab vapor, and soil vapor (SFBRWQCB-ESLi) based on human health risk criteria for commercial/industrial settings.

These screening levels are used as guidelines to assess whether a potential human health risk might be present due to vapor intrusion. However, the values are extremely conservative and do not necessarily indicate the presence of a risk, but rather that additional Site evaluation, which could include engineering controls or remediation, is warranted. These guidelines are referenced and presented in the Table 3 of this report.

#### **SCOPE OF WORK**

The Phase II ESA included the scope of work described below. A total of 14 soil borings (SB-1 through SB-14) were advanced for soil and soil vapor sampling at the locations shown on Figure 2. Sample collection was generally conducted as described below, but may have been adjusted based on field conditions including the subsurface lithology and whether borehole cave-ins were encountered.

#### *Soil Testing*

- Drilled 14 soil borings (SB-1 through SB-14) and collected soil samples at approximately 1 and 5 feet bgs from each boring;

Sam Salim

Phase II Environmental Site Assessment

2830, 11190, and 11258 South Riverside Avenue in Bloomington, California

April 25, 2022

Page 4

---

- Collected seven soil samples (SG-1 through SG-7) from an existing stockpile at the Site as shown on Figure 2; and
- Analyzed the 1-foot soil samples (14 total) and stockpile samples (7 total) at a State-certified laboratory for total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd), and motor oil (TPHmo) by EPA Method 8015, VOCs by EPA Method 8260B, and Title 22 metals by EPA Methods 6010B and 7471A.

#### Soil Vapor Testing

- Installed temporary 5-foot-deep soil vapor probes at nine boring locations (SB-1, SB-3, SB-4, SB-5, SB-7, SB-10, SB-12, SB-13, and SB-14) as shown on Figure 2;
- Collected soil vapor samples from nine probes and analyzed them at a State-certified laboratory for VOCs by EPA Method TO-15; and
- Removed the temporary soil vapor probes after sampling to match existing surface conditions.

## **DISCUSSION OF RESULTS**

The following sections summarize the laboratory analytical results for soil and soil vapor samples collected as part of the Phase II ESA.

### **Soil Results**

On February 28, 2022, soil samples were collected from 14 boring locations (SB-1 through SB-14) to evaluate the potential presence of residual environmental impacts from Site-related RECs. In general, the borings were distributed throughout the site based on historical and current industrial activities. A higher density of borings were drilled in the southern portion of the Site (SB-9 to SB-14) because of the former industrial facility noted in the Phase I ESA.

Additionally, two soil stockpiles of unknown origin were present in the southern parcel. The stockpile volumes were estimated to be 1,500 and 1,750 cubic yards. On March 1, 2022, seven soil samples (SG-1 through SG-7) were collected from these stockpiles. The number of samples was determined based on a frequency of 1 sample per 250 cubic yards, which is consistent with the DTSC Clean Imported Fill Material Advisory October, 2001.

Soil analytical results for TPH/VOCs and metals are summarized in Tables 1 and 2, respectively.

#### Shallow Soil Sampling

Shallow soil samples were collected at 1 and 5 feet bgs at each location (total of 28 soil samples). The 1-foot soil samples were analyzed for TPH, VOCs, and metals, while the 5-foot samples were placed on hold.

Sam Salim

Phase II Environmental Site Assessment

2830, 11190, and 11258 South Riverside Avenue in Bloomington, California

April 25, 2022

Page 5

---

Soil analytical results were non-detect above laboratory reporting limits (RLs) for TPHg and all VOCs except for one detection of xylene in sample SB-6-1 at a concentration of 3.41 micrograms per kilogram. As anticipated based on historical operations, both TPHd and TPHmo were both detected in 6 out of 14 samples, but at concentrations were below the regulatory screening criteria. Sample SB-2-1 was reported to contain elevated motor oil at a concentration of 5,130 mg/kg though less than the screening level of 10,000.

Similarly, soil concentrations were below regulatory screening levels for all metals except arsenic, which was detected at concentrations below the background soil concentration in California. Therefore, soil testing results did not identify the presence of a significant release at the locations tested.

#### Stockpile Sampling

Stockpile soil sample results were non-detect above laboratory RLs for TPHg and VOCs and contained low-level detections of TPHd and TPHmo that were below the regulatory screening criteria. Similarly, stockpile soil samples were below regulatory screening levels for all metals except arsenic, which was detected at concentrations below the background soil concentration in California.

#### **Soil Vapor Survey Results**

On March 1, 2022, field personnel performed a soil vapor survey that included the collection of shallow vapor samples from nine temporary 5-foot vapor probes.

Detected VOCs for the nine soil vapor samples were reported at low-level concentrations that were below commercial/industrial screening levels. The soil vapor survey results are summarized in Table 3.

#### **FINDINGS**

The results of the Phase II ESA support the following findings and observations:

- Soil metals results were either below regulatory screening levels or background levels in California soils, which are representative of naturally occurring concentrations.
- Soil and soil vapor VOC results were generally low and below regulatory screening levels, which indicates that evidence of a residual source or a significant release was not identified during the investigation.

#### **CONCLUSIONS AND RECOMMENDATIONS**

This report presents the results of the Phase II ESA conducted to investigate the RECs identified by a Phase I ESA for the Site. This investigation included the collection of soil and soil vapor samples to assess whether

Sam Salim

Phase II Environmental Site Assessment

2830, 11190, and 11258 South Riverside Avenue in Bloomington, California

April 25, 2022

Page 6

---

concentrations of chemicals of potential concern warrant further action. Soil and soil vapor data collected during the Phase II investigation did not show a discernable pattern of contamination that can be attributed to historical operations at the Site. No “source areas” were identified during the Phase II and the assessment results did not indicate a major release incident at the locations tested.

The results of Phase II ESA did not identify the need for further actions at the Site and HMC has no additional recommendations at this time. Accordingly, HMC no longer views the RECs previously identified in the Phase I ESA as RECs.

We thank you for the opportunity to be of service. If there are any questions or comments regarding this report, please contact the undersigned at your convenience.

Sincerely,

Hazard Management Consulting, Inc.

Report No.: 2203002

Project Name: 2830, 11190, 11258 S Riverside Ave., Bloomington, CA

Dear Maclyn O'Donnell,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on March 01, 2022.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

A handwritten signature in black ink, appearing to read "John Schubert".

Report No.: 2203021

Project Name: 2830, 11190, 11258 S Riverside Ave., Bloomington, CA

Dear Maclyn O'Donnell,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on March 02, 2022.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

A handwritten signature in blue ink, appearing to read "D. Sanchez". Below the signature, the words "Project Manager" are printed in a small, black, sans-serif font.

781 East Washington Blvd., Los Angeles, CA 90021

Date Received: 03/02/22

---

This data package contains sample and QC results for nine air samples, requested for the above referenced project on 03/02/22. The samples were received intact.

### Volatile Organics in Air by MS (EPA TO-15):

- High ICAL percent RSD (relative standard deviation) was observed for 1,2,4-trichlorobenzene in the calibration analyzed 02/28/22 16:48; affected data was qualified with "b".
- No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Bonion Environmental Inc Project: FIBLO

Date Received: 3/2/2022

Sampler's Name Present:  Yes  No

Section 2

Sample(s) received in a cooler?  Yes, How many? \_\_\_\_\_  No (skip section 2)

Sample Temp (°C)  
(No Cooler): AMBI

Sample Temp (°C), One from each cooler: #1: \_\_\_\_\_ #2: \_\_\_\_\_ #3: \_\_\_\_\_ #4: \_\_\_\_\_

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: \_\_\_\_\_

Section 3

Was the cooler packed with:  Ice  Ice Packs  Bubble Wrap  Styrofoam  
 Paper  None  Other \_\_\_\_\_

Cooler Temp (°C): #1: \_\_\_\_\_ #2: \_\_\_\_\_ #3: \_\_\_\_\_ #4: \_\_\_\_\_

Section 4

	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified?  Verbal PM Initials: \_\_\_\_\_ Date/Time: \_\_\_\_\_  
 Email (email sent to/on): \_\_\_\_\_ / \_\_\_\_\_

Project Manager's response:

Completed By: Yanita

Date: 3/2/2022
