

APPENDIX A

Mitigation Monitoring and Reporting Program

Appendix A Mitigation Monitoring and Reporting Program

Impacts	Mitigation Measure	Responsible / Monitoring Party	Monitoring Action or Implementation Stage
Biological Resources			
<p>The analysis contained within Section 4.4, Biological Resources, indicated that no special-status wildlife species were observed during the August 2023 field survey. It also noted that these species were not likely to occur in the Project site. However, the analysis did note that because of the mobility of avian species, some species may occur as transients within the Project site and could be affected during both construction and operation of the proposed Project. As such, Mitigation Measures BIO-1 through BIO-3 were identified to address these potentially significant impacts and with their implementation, would reduce impacts to less than significant.</p>	<p>BIO-1 Nesting Bird Surveys and Avoidance Measures</p> <p>If construction of the Project would occur during the recognized nesting season, seasonally timed presence/absence surveys for nesting birds shall be conducted by a qualified biologist (February 15 through September 15); surveys for raptors shall be conducted from January 1 through August 15. If construction activities carry over into a second nesting season(s) the surveys will need to be completed annually until the Project is complete. If construction starts prior to the start of the nesting season, and to allow for continued construction in that specific year, surveys will need to be done at the start of that year's nesting season. Each survey event will include a minimum of three survey events, 3 days apart (with the last survey no more than three days prior to the start of site disturbance), if construction is scheduled to begin during avian nesting season surveys shall be conducted within 500 feet of all Project activities (where accessible).</p> <p>If special-status species are observed, consultation with U.S. Fish and Wildlife Service (USFWS) and/or California Department of Fish and Wildlife (CDFW) is required. If breeding birds with active nests are found prior to or during construction, a qualified biological monitor shall establish a 300-foot buffer around the nest and no proposed Project activities will be allowed within the buffer(s) until the young have fledged from the nest or the nest fails. The prescribed buffers may be adjusted by the qualified biologist based on existing conditions around the nest, planned construction activities, tolerance of</p>	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Prior to earthmoving activities or construction and then during initial ground disturbing activities, and periodically, as needed thereafter.</p>

Impacts	Mitigation Measure	Responsible / Monitoring Party	Monitoring Action or Implementation Stage
	<p>the species, and other pertinent factors. The qualified biologist shall conduct regular monitoring of the nest to determine success/failure and to ensure that Project activities are not conducted within the buffer(s) until the nesting cycle is complete or the nest fails. If construction occurs outside of avian nesting season, only a single presence/absence survey will be required.</p>		
	<p>BIO-2 Environmental Awareness Training All Project personnel must attend an environmental awareness and compliance training program prior to working on the Project site. The training program shall present the environmental regulations and applicable permit conditions that the Project team shall comply with. The training program shall include applicable measures established for the Project to minimize impacts to water quality and avoid sensitive resources, habitats, and species. Dated sign-in sheets for attendees at these meetings shall be maintained and submitted to the City of Maywood.</p>	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Initial training prior to construction and administered as needed, provided new contractor/staff access the work site area.</p>
	<p>BIO-3 Implement Best Management Practices Grading plans for the Project shall include the following Best Management Practices (BMPs):</p> <ul style="list-style-type: none"> All excavation, steep-walled holes or trenches in excess of six inches in depth shall be covered at the close of each working day by plywood or similar materials or provided with one or more escape ramps constructed of earth dirt fill or wooden planks. Trenches will also be inspected for entrapped wildlife each morning prior to onset of construction activities and immediately prior to covering with plywood at the end of each working day. Before such holes or trenches are filled, they will be thoroughly inspected for entrapped wildlife. Any wildlife discovered will be allowed to escape before construction activities are allowed to resume or removed from the trench 	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Prior to and during construction.</p>

Impacts	Mitigation Measure	Responsible / Monitoring Party	Monitoring Action or Implementation Stage
	<p>or hole by a qualified biologist holding the appropriate permits (if required).</p> <ul style="list-style-type: none"> • Removal/disturbance of vegetation shall be minimized to the greatest extent feasible. • Install and maintain appropriate erosion/sediment control measures, as needed, throughout the duration of work activities. 		
Cultural Resources			
<p>The analysis contained in Section 4.5, Cultural Resources, indicated that there are no recorded archaeological historical resources in the Project corridor, although the potential to encounter buried archaeological deposits during construction cannot be ruled out and as such, a mitigation measure is required. Given this, Mitigation Measure CUL-1 was identified and once implemented, will reduce impacts to less than significant.</p>	<p>CUL-1 Cultural Materials Discovered During Construction</p> <p>Should an archaeological deposit be encountered during Project subsurface construction activities, all ground-disturbing activities within 25 feet shall be redirected and a qualified archaeologist meeting the <i>Secretary of the Interior's Professional Qualifications Standards for Archeology</i> contacted to assess the situation, determine if the deposit qualifies as a historical resource, consult with agencies as appropriate, and make recommendations for the treatment of the discovery. If the deposit is found to be significant (i.e., eligible for listing in the CRHR), the City shall be responsible for funding and implementing appropriate mitigation measures. Mitigation measures may include recording the archaeological deposit, data recovery and analysis, and public outreach regarding the scientific and cultural importance of the discovery. Upon completion of the selected mitigations, a report documenting methods, findings, and recommendations shall be prepared and submitted to the City for review, and the final report shall be submitted to the SCCIC at California State University, Fullerton. Significant archaeological materials shall be submitted to an appropriate local curation facility and used for future research and public interpretive displays, as appropriate.</p>	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Prior to construction and grading activities.</p>

**Draft Initial Study and Mitigated Negative Declaration
Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements**

Impacts	Mitigation Measure	Responsible / Monitoring Party	Monitoring Action or Implementation Stage
	<p>The City shall inform its contractor(s) of the sensitivity of the Project area for archaeological deposits and shall verify that the following directive has been included in the appropriate contract documents:</p> <p>“The subsurface of the construction site may be sensitive for Native American archaeological deposits and associated human remains, and historic-period archaeological deposits. If archaeological deposits are encountered during Project subsurface construction, all ground-disturbing activities within 25 feet shall stop and a qualified archaeologist contacted to assess the situation and make recommendations for the treatment of the discovery. Project personnel shall not collect or move any archaeological materials. Archaeological deposits can include shellfish remains; bones; flakes of, and tools made from, obsidian, chert, and basalt; mortars and pestles; and historical bottles and ceramics. Contractor acknowledges and understands that excavation or removal of archaeological material is prohibited by law and constitutes a misdemeanor under California Public Resources Code, Section 5097.5.”</p>		
Geology & Soils			
<p>Section 4.7, Geology and Soils, indicated that one geological unit contained in the Project area has a low-to-high paleontological potential, increasing with depth. Further, the transition from low-to-high sensitivity is estimated to occur at depths of approximately 10 feet below ground surface, based upon documented fossil discoveries in the vicinity. Because the proposed Project will require some soil disturbance, impacts to potential paleontological resources is considered potentially significant. However, with the implementation of Mitigation Measures GEO-1, GEO-2, and GEO-3, these impacts would be reduced to less-than-significant levels.</p>	<p>GEO-1 Paleontological Monitoring Program</p> <p>A paleontologist meeting professional standards as defined by Murphey et al. (2019) shall be retained as the Project Paleontologist to oversee all aspects of paleontological mitigation, including paleontological monitoring of earthwork and ground-disturbing activities into undisturbed geologic units with high paleontological potential, to be conducted by a paleontological monitor meeting industry standards (Murphey et al. 2019). Within the Project Area, older alluvium has high paleontological potential and is present at estimated depths of 10 feet below ground surface.</p>	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Prior to construction and grading and soil removal.</p>

**Draft Initial Study and Mitigated Negative Declaration
Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements**

Impacts	Mitigation Measure	Responsible / Monitoring Party	Monitoring Action or Implementation Stage
	<p>The paleontological monitoring program shall include development of a Paleontological Resources Monitoring and Mitigation Plan that outlines where and when monitoring is necessary, on-site (full-time) paleontological monitoring of ground disturbance over 10 feet in depth, an unanticipated discoveries plan in the event that fossils are encountered, and final reporting.</p>		
	<p>GEO-2 Paleontological Monitoring The Project Paleontologist shall develop a Worker's Environmental Awareness Program training that communicates requirements and procedures for the inadvertent discovery of paleontological resources during construction to be delivered by the paleontologist or their designated representative to the construction crew prior to the onset of ground disturbance.</p>	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Prior to construction and grading and soil removal.</p>
	<p>GEO-3 Inadvertent Discoveries In the event that paleontological resources are encountered during construction activities, all work must stop in the immediate vicinity of the finds while the paleontological monitor documents the find. The designated Project Paleontologist shall assess the find. Should the Project Paleontologist assess the find as significant, the find shall be collected and curated in an accredited repository along with all necessary associated data and curation fees.</p>	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Prior to construction and grading and soil removal.</p>
Noise			
<p>Section 4.13, Noise indicates that construction noise would be short-term and intermittent. Furthermore, the implementation of Mitigation Measure NOI-1 would follow the recommendations within the 2018 FTA Transit Noise and Vibration Assessment Manual to help achieve the City of Maywood Municipal Code construction noise limits. Therefore, impacts from construction noise would be less than significant with mitigation incorporated.</p>	<p>NOI-1: Construction Activity Implementation of the following mitigation plan is required to reduce the potential construction period noise impacts for all Grading/Excavation work within 510 feet, all Drainage/Utilities/Sub-Grade work within 384 feet, and all Paving work within 250 feet of residential property:</p> <ul style="list-style-type: none"> Follow the construction time restrictions as listed in Section 5-23.11 "Exemptions," Paragraph (c) in the City of Maywood Municipal Code as much as possible. 	<p>City of Maywood, Engineering and Public Works Department</p>	<p>During construction activities</p>

**Draft Initial Study and Mitigated Negative Declaration
Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements**

Impacts	Mitigation Measure	Responsible / Monitoring Party	Monitoring Action or Implementation Stage
	<ul style="list-style-type: none"> • Follow the construction noise mitigation measures listed in Step 5 within Section 7.1 “Construction Noise Assessment” in the FTA 2018 Transit Noise and Vibration Impact Assessment Manual document as feasible. <ul style="list-style-type: none"> • Site equipment as far away from noise-sensitive sites as possible. • Combine noise operations to occur in the same time period. The total noise level produced will not be substantially greater than the level produced if the operations were performed separately. • Avoid nighttime activities (around residential receptors as much as possible). Sensitivity to noise increases during the nighttime hours in residential neighborhoods. • Use specifically quieted equipment, such as properly working mufflers on all engines. • Develop a noise mitigation plan that will be developed later when detailed information is available to make final decisions on all specific mitigation measures. The objective of the plan will be to minimize construction noise using all reasonable (e.g., cost vs. benefit) and feasible (e.g., possible to construct) means available. <p>Post a construction site notice that includes the following information: permit number, name and phone number of the contractor, hours of construction allowed by code or any discretionary approval for the work, and City telephone numbers where violations can be reported. The notice shall be displayed in a location that is readily visible to the public.</p>		

**Draft Initial Study and Mitigated Negative Declaration
Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements**

Impacts	Mitigation Measure	Responsible / Monitoring Party	Monitoring Action or Implementation Stage
Tribal Cultural Resources			
<p>A review of the California Historical Resources Information System database did not identify recorded tribal cultural resources. However, the NAHC noted that the records search was considered “negative” for Native American and tribal cultural resources.</p> <p>As part of its AB 52 consultation requirements, on October 19, 2023, the City sent out letters via certified mail to eleven tribal representatives identified by the NAHC making them aware of the proposed Project. The City provided the Tribes 30 days in which to request consultation on the Project’s potential impacts to tribal cultural resources. The following Tribes were contacted:</p> <ul style="list-style-type: none"> • Gabrieliño Band of Missi–on Indians - Kizh Nation • Gabrieliño / Tongva San Gabriel Band of Mission Indians • Gabrieliño / Tongva Nation • Gabrieliño / Tongva Indians of California Tribal Council • Gabrieliño / Tongva Tribe • Santa Rosa Band of Cahuilla Indians • Soboba Band of Luiseño Indians <p>Of the Tribes contacted by the City, one Tribe (Gabrieliño Band of Miss–on Indians - Kizh Nation) has requested consultation. This consultation occurred on January 30, 2024, via e-mail, in lieu of in-person, per the Tribe’s request. In its e-mail consultation, the Tribe provided the City with information and documentation relative to the Tribe’s ancestral connection with the area and affirmed they are the lineal descendants to the villages within and around the area of the proposed Project. The Tribe also noted that subsurface activities could have the potential to affect Tribal Cultural Resources (TCR) and indicated that this has been the case for past activities in the area. The Tribe also provided the City with historical</p>	<p>TCR-1 Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities</p> <p>A. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieliño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any “ground-disturbing activity” for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). “Ground-disturbing activity” shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.</p> <p>B. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.</p> <p>C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or “TCR”), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.</p>	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Prior to construction and grading and soil removal.</p>

**Draft Initial Study and Mitigated Negative Declaration
Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements**

Impacts	Mitigation Measure	Responsible / Monitoring Party	Monitoring Action or Implementation Stage
<p>resources attesting to the sensitivity of the area, its cultural significance and the high amount of pre-historic human activity that occurred there. The Tribe also noted that TCR objects are found in both disturbed and undisturbed soils. Therefore, documentation containing information related to whether the “original” soils are present on-site is an important consideration in their analysis of TCRs. As such, in the absence of documentation or if it is known that the original soils are still present within the project footprint, the creation of protective measures are required. The Tribe provided the City with recommended mitigation measures and which are noted below. With the implementation of the mitigation measures noted below (TCR-1, TCR-2, and TCR-3), impacts would be less than significant with mitigation incorporated.</p>	<p>D. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.</p>		
	<p>TCR-2: Unanticipated Discovery of Tribal Cultural Resource Objects (Non-Funerary/Non-Ceremonial)</p> <p>A. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe’s sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.</p>	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Prior to construction and grading and soil removal.</p>
	<p>TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects</p> <p>A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section</p>	<p>City of Maywood, Engineering and Public Works Department</p>	<p>Prior to construction and grading and soil removal.</p>

**Draft Initial Study and Mitigated Negative Declaration
 Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements**

Impacts	Mitigation Measure	Responsible / Monitoring Party	Monitoring Action or Implementation Stage
	<p>5097.98, are also to be treated according to this statute.</p> <p>B. If Native American human remains and/or grave goods are discovered or recognized on the project site, then Public Resource Code 5097.9 as well as Health and Safety Code Section 7050.5 shall be followed.</p> <p>C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).</p> <p>D. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods.</p> <p>E. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.</p>		

APPENDIX B

Traffic Analysis Memorandum

To: Ziad Mazboudi Transtech 13367 Benson Avenue Chino CA 91710	From: Cathy Lawrence 38 Technology Drive Irvine CA 92618
File: 2042639600	Date: July 21, 2022

Reference: Slauson Avenue and Atlantic Boulevard Left-Turn Storage Evaluation Summary

The I-710 Corridor Project would widen the freeway mainline and modernize the design of freeway and arterial interchanges to improve air quality, improve traffic safety, and accommodate future traffic growth in the region. Traffic forecasts show that the I-710 Corridor Project would result in a substantial increase in the peak hour eastbound left-turn and northbound left-turn traffic volumes at the intersection of Slauson Avenue and Atlantic Boulevard in the City of Maywood. Improvements to the Slauson Avenue and Atlantic Boulevard intersection are planned to accommodate the additional peak hour left-turn traffic. Those improvement plans include widening of the west leg and south leg to accommodate dual left-turn lanes at the intersection. Stantec Consulting Services Inc. has performed an evaluation of the left-turn storage requirement for the eastbound and northbound left-turn pockets at the intersection of Slauson Avenue and Atlantic Boulevard in support of the intersection improvement design.

METHODOLOGY

Future 2035 volumes were obtained from the environmental documentation prepared for the I-710 Corridor Project (*I-710 Corridor Project EIR/EIS Intersection Traffic Impact Analysis Report*, LSA, January 2012). **Figure 1** illustrates the existing and future geometrics and peak hour volumes at the intersection of Slauson Avenue and Atlantic Boulevard.

Queue lengths were estimated based on both the intersection capacity utilization (ICU) methodology and the Highway Capacity Manual (HCM) methodology. Traffix, Synchro 11, and SimTraffic intersection analysis software packages were used to estimate the queue lengths based on the HCM methodology. These three software programs produced a range of queue lengths based on HCM methodology.

The analysis assumed 120 second cycle length at the intersection, random arrivals, and minimum pedestrian walk times. Adjustments to the cycle length and traffic platooning from coordination of the signals along Slauson Avenue would result in differing queue lengths.

EVALUATION RESULTS

The level of service at the intersection under the existing, future without improvements, and future with improvements are summarized in **Table 1**.

Table 1 Slauson Avenue and Atlantic Boulevard LOS Summary

Analysis Methodology	Existing (May 2022)			2035 Without Planned Improvements			2035 With Planned Improvements		
	AM	Mid-Day	PM	AM	Mid-Day	PM	AM	Mid-Day	PM
ICU	0.72/C	0.64/B	0.78/C	0.81/D	0.75/C	1.04/F	0.61/B	0.60/A	0.79/C
HCM Delay (sec/veh)	32.9/C	30.9/C	34.3/C	32.5/C	31.2/C	55.2/E	38.3/D	38.0/D	48.0/D

July 21, 2022

Ziad Mazboudi

Page 2 of 4

Reference: Slauson Avenue and Atlantic Boulevard Left-Turn Storage Evaluation Summary

Table 2 summarizes the expected queues based on the ICU and HCM methodologies. Without the planned intersection improvements, the eastbound and northbound left-turn queues would extend past the adjacent intersections to the west and south, respectively.

With the proposed eastbound and northbound dual left-turn lanes, based on the ICU and HCM methodologies, the maximum eastbound left-turn queue length occurs during the PM peak hour and would vary from 240 feet per lane to a conservative 350 feet per lane (total of 700 feet). Similarly, the maximum northbound left-turn queue would vary from 165 feet per lane to 220 feet per lane (total 440 feet).

If unlimited space was available for the design of the turn pockets, then dual eastbound turn pocket length of 350 feet plus 120-foot transition and dual northbound turn pocket length of 220 feet plus 120-foot transition would be sufficient to accommodate the 95th percentile queues. However, the lengths of the turn pockets are constrained by the location of adjacent turn pockets. The westbound left-turn pocket into the shopping center west of the intersection limits the length of the eastbound turn pocket at Atlantic Boulevard to approximately 240 feet, and the southbound left-turn pocket at E. 59th Place south of the intersection limits the northbound turn pocket at Slauson Avenue to approximately 160 feet. Consequently, there may be brief periods during the peak hours when vehicles extend out of the turn pockets.

CONCLUSIONS

The future increase in eastbound and northbound left-turn peak hour volumes at Slauson Avenue and Atlantic Boulevard require improvements at the intersection. With the existing lane configuration, the intersection would operate at LOS E or F during the PM peak hour under future 2035 conditions. Dual left-turn lanes eastbound and northbound are proposed which would result in LOS D or better during the peak hours. Based on estimated peak hour queues, the maximum eastbound left-turn queue length would vary from 240 feet per lane to a conservative 350 feet per lane, and the maximum northbound left-turn queue would vary from 165 feet per lane to 220 feet per lane.

Based on physical limitations, the maximum eastbound dual left-turn pocket would be approximately 240 feet in length. The maximum northbound dual left-turn pocket would be approximately 155 feet. There may be times during the peak hours when the left-turn queues exceed the available turn pocket length.

Air Quality and Greenhouse Gas Emissions Study

Revision	Description	Author	Date	Quality Check	Date	Independent Review	Date

Air Quality and Greenhouse Gas Emissions Study

The conclusions in the Report titled Air Quality and Greenhouse Gas Emissions Study are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from City of Maywood (the "Client") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided by the Client to applicable authorities having jurisdiction and to other third parties in connection with the project, Stantec disclaims any legal duty based upon warranty, reliance or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

1 Introduction

1.1 Purpose of Analysis

The purpose of this Air Quality and Greenhouse Gas Emissions Study is to evaluate the existing conditions and potential air quality and greenhouse gas (GHG) emissions impacts resulting from the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project (Project).

1.2 Project Description

The Project site is a linear transportation corridor along Slauson Avenue, located within the central portion of the City of Maywood, California. The Project is intended to improve the operation of the Slauson Avenue and Atlantic Boulevard intersection, relieve congestion during both AM and PM peak hours, and to alleviate existing queuing conditions. Construction activities would be focused on the Slauson Avenue/Atlantic Boulevard intersection, while the remainder of activities would be associated with traffic signals and synchronization along the approximately 1.1-mile-long Project corridor.

The Project would involve the following improvements to the Slauson Avenue/Atlantic Boulevard intersection: widening the east and west legs of Slauson Avenue and the south leg of Atlantic Boulevard to accommodate dual left turn lanes on eastbound Slauson Avenue and northbound Atlantic Boulevard; reconstructing curb returns at all four corners to accommodate current truck turning standards; closing the mid-block median opening along Slauson Avenue; reducing the width of the existing median islands along the east and west legs of Slauson Avenue and north leg of Atlantic Boulevard; grinding and overlaying the existing intersection approaches and construction decorative paver crosswalks; and restriping the lanes and crosswalks. The Project would also include updating traffic signals and traffic signal synchronization at the following nine intersections:

- Slauson Avenue/Maywood Avenue;
- Slauson Avenue/Everett Avenue;
- Slauson Avenue/Loma Vista Avenue;
- Slauson Avenue/Carmelita Avenue;
- Slauson Avenue/Corona Avenue;
- Slauson Avenue/Gifford Avenue;
- Slauson Avenue/Fishburn Avenue;
- Slauson Avenue/Pine Avenue; and
- Slauson Avenue/Atlantic Boulevard.

Air Quality and Greenhouse Gas Emissions Study

The Project would include various other improvements, including constructing new Americans with Disabilities Act (ADA)-compliant curb ramps, relocating commercial signs, removing approximately seven parking stalls, relocating existing commercial driveways, and relocating three existing Metro bus stops.

The total disturbance area associated with implementation of the Project would be approximately 1.5 acres. Construction would occur over a 12-month period.

1.3 Surrounding Land Uses

The Project corridor is urbanized and largely built-out as an existing transportation land use. Adjacent land uses along the east/west portion of the corridor are almost exclusively retail/commercial but periodically punctuated by multi-family residential. Land use adjacent to the north/south portion of the corridor include commercial (first parcel depth) and single-family residential (second parcel depth).

2 Air Quality

2.1 Environmental Setting

The Project is located within the City of Maywood in Los Angeles County, which is within the South Coast Air Basin (SCAB). Regulatory oversight authority regarding air quality rests at the local, state, and federal levels with the South Coast Air Quality Management District (SCAQMD), California Air Resources Board (CARB), and U.S. Environmental Protection Agency (USEPA), respectively. The SCAB covers approximately 12,000 square miles, consisting of Orange County and the urbanized areas of San Bernardino, Riverside, and Los Angeles counties. The distinctive climate of the SCAB is determined by its terrain and geographic location. The SCAB is a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean to the southwest and high mountains around the perimeter. The general region lies in the semi-permanent high-pressure zone of the eastern Pacific, resulting in a mild climate tempered by cool sea breezes with light average wind speeds. The usually mild climatological pattern is interrupted occasionally by periods of extremely hot weather, winter storms, or Santa Ana winds. The SCAB is classified as a dry-hot desert climate (SCAQMD 1993).

2.1.1 CRITERIA AIR POLLUTANTS

Criteria air pollutants includes ozone (O_3), carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), particulate matter (measured both in units of smaller than 2.5 microns in diameter [$PM_{2.5}$] and in units of particulate matter smaller than 10 microns in diameter [PM_{10}]), and lead (Pb).

Ozone. Most ground-level ozone is formed as a result of complex photochemical reactions in the atmosphere between reactive organic gases (ROG), nitrogen oxides (NOx), and oxygen. ROG and NOx are considered precursors to the formation of ozone, a highly reactive gas that can damage lung tissue and affect respiratory function. While ozone in the lower atmosphere is considered a damaging air pollutant, ozone in the upper atmosphere is beneficial, as it protects the Earth from harmful ultraviolet radiation. However, atmospheric processes preclude ground-level ozone from reaching the upper atmosphere (USEPA 2022a).

Carbon Monoxide. CO is a colorless, odorless, poisonous gas produced by the incomplete combustion of fossil fuels. Elevated levels of CO can result in harmful health effects, especially for the young and elderly, and can also contribute to global climate change (USEPA 2022a).

Nitrogen Dioxide. NO_2 is a brownish, highly reactive gas primarily produced as a result of the burning of fossil fuels. NO_2 can also lead to the formation of ozone in the lower atmosphere. NO_2 can cause respiratory ailments, especially in the young and elderly, and can lead to degradations in the health of aquatic and terrestrial ecosystems (USEPA 2022a).

Sulfur Dioxide. SO_2 is primarily emitted from the combustion of coal and oil by steel mills, pulp and paper mills, and non-ferrous smelters. High concentrations of SO_2 can aggravate existing respiratory and cardiovascular diseases in asthmatics and others who suffer from emphysema or bronchitis. SO_2 also contributes to acid rain, which in turn, can lead to the acidification of lakes and streams (USEPA 2022a).

Air Quality and Greenhouse Gas Emissions Study

Particulate Matter. Airborne PM is not a single pollutant, but rather is a mixture of many chemical species. PM is a complex mixture of solids and aerosols composed of small droplets of liquid, dry solid fragments, and solid cores with liquid coatings. Particles vary widely in size, shape, and chemical composition, and may contain inorganic ions, metallic compounds, elemental carbon, organic compounds, and compounds from the earth's crust. Particles are defined by their diameter for air quality regulatory purposes. Those with a diameter of 10 microns or less (PM_{10}) are inhalable into the lungs and can induce adverse health effects. Fine particulate matter is defined as particles that are 2.5 microns or less in diameter ($PM_{2.5}$). Therefore, $PM_{2.5}$ comprises a portion of PM_{10} . Emissions from combustion of gasoline, oil, diesel fuel or wood produce much of the $PM_{2.5}$ pollution found in outdoor air, as well as significant proportion of PM_{10} . PM_{10} also includes dust from construction sites, landfills and agriculture, wildfires and brush/waste burning, industrial sources, wind-blown dust from open lands, pollen, and fragments of bacteria.

PM may be either directly emitted from sources (primarily particles) or formed in the atmosphere through chemical reactions of gases (secondary particles) such as SO_2 , NO_x , and certain organic compounds (USEPA 2022a).

Lead. Sources of Pb include pipes, fuel, and paint, although the use of Pb in these materials has declined dramatically over the years. Historically, a main source of Pb was automobile emissions. Pb can be inhaled directly or ingested by consuming Pb-contaminated food, water, or dust. Fetuses and children are most susceptible to Pb poisoning, which can result in heart disease and nervous system damage (USEPA 2022b). Through regulations, USEPA has gradually reduced the Pb content of gasoline. This program has essentially eliminated violations of the Pb standard in urban areas except those areas with Pb point sources.

2.1.2 ATTAINMENT STATUS

The USEPA and the California Air Resources Board (CARB) designate air basins where ambient air quality standards are exceeded as “nonattainment” areas. If standards are met, the area is designated as an “attainment” area. If there is inadequate or inconclusive data to make a definitive attainment designation, they are considered “unclassified.” National nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Attainment status is based on the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS). Each standard has a different definition, or “form” of what constitutes attainment, based on specific air quality statistics. For example, the federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring values exceeds the threshold per year. In contrast, the federal annual standard for $PM_{2.5}$ is met if the 3-year average of the annual average $PM_{2.5}$ concentration is less than or equal to the standard.

The Federal Clean Air Act (FCAA) identifies two types of NAAQS. Primary standards provide public health protection, including protecting the health of sensitive populations such as asthmatics, children, and the elderly. Secondary standards provide public welfare protection, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings. The CAAQS are equal to or more stringent than the NAAQS and include pollutants for which national standards do not exist.

Air Quality and Greenhouse Gas Emissions Study

Table 1 presents the applicable CAAQS and NAAQS.

Table 1: California and National Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards ¹	National Standards ²	
			Primary	Secondary
Ozone (O ₃)	8-hour	0.070 ppm (137 µg/m ³)	0.070 ppm (137 µg/m ³)	Same as Primary Standards
	1-hour	0.090 ppm (180 µg/m ³)	--	
Carbon monoxide (CO)	8-hour	9 ppm (10 mg/m ³)	9 ppm (10 mg/m ³)	--
	1-hour	20 ppm (23 mg/m ³)	35 ppm (40 mg/m ³)	
Nitrogen dioxide (NO ₂)	Annual arithmetic mean	0.030 ppm (57 µg/m ³)	0.053 ppm (100 µg/m ³)	Same as Primary Standard
	1-hour	0.18 ppm (339 µg/m ³)	100 ppb (188 µg/m ³)	--
Sulfur dioxide (SO ₂)	Annual arithmetic mean	--	0.030 ppm	--
	24-hour	0.04 ppm (105 µg/m ³)	0.14 ppm	--
	3-hour	--	--	0.5 ppm (1,300 µg/m ³)
	1-hour	0.25 ppm (655 µg/m ³)	0.075 ppm (196 µg/m ³)	--
Respirable Particulate Matter Smaller than 10 Microns in Diameter (PM ₁₀)	Annual arithmetic mean	20 µg/m ³	--	Same as Primary Standards
	24-hour	50 µg/m ³	150 µg/m ³	
Respirable Particulate Matter Smaller than 2.5 Microns in Diameter (PM _{2.5})	Annual arithmetic mean	12 µg/m ³	12 µg/m ³	15 µg/m ³
	24-hour	--	35 µg/m ³	Same as Primary Standards
Sulfates	24-hour	25 µg/m ³	--	--
Lead (Pb)	30-day average	1.5 µg/m ³	--	--
	Calendar quarter	--	1.5 µg/m ³	Same as Primary Standard
	Rolling 3-month average	--	0.15 µg/m ³	
Hydrogen sulfide (H ₂ S)	1-hour	0.03 ppm (42 µg/m ³)	--	--
Vinyl chloride (chloroethene)	24-hour	0.01 ppm (26 µg/m ³)	--	--
Visibility reducing particles	8-hour	In 1989, the Air Resources Board converted the general statewide 10-mile visibility standard to instrumental equivalents, which are extinction of 0.23 per kilometer.	--	--

Notes:

1. CO, SO₂ (1- and 24-hour), NO₂, O₃, PM₁₀, and visibility reducing particles standards are not to be exceeded.

2. Not to be exceeded more than once a year except for annual standards.

-- = no standard established

µg/m³ = micrograms per cubic meter

mg/m³ = milligrams per cubic meter

ppm = parts per million

Air Quality and Greenhouse Gas Emissions Study

Attainment Status

Table 2 presents the federal and state attainment status for the SCAB, in which the Project is located. The Project is in an area designated non-attainment for both the federal and state standards for O₃ and PM_{2.5}, the state standard for PM₁₀, and the federal standard for lead (SCAQMD 2018).

Table 2: Attainment Status of the South Coast Air Basin

Pollutant	Federal Designation	State Designation
Ozone (O ₃) – 1-Hour and 8-Hour	Non-Attainment (Extreme)	Non-Attainment
Carbon Monoxide (CO) – 1-Hour and 8-Hour	Attainment/Maintenance	Attainment
Nitrogen Dioxide (NO ₂) – 1-Hour and Annual	Attainment	Attainment
Sulfur Dioxide (SO ₂) – Annual	Unclassifiable/Attainment	*
Particulate Matter (PM ₁₀) – 24-Hour	Attainment/Maintenance	Non-Attainment
Particulate Matter (PM _{2.5}) – Annual	Non-Attainment (Serious)	Non-Attainment
Lead (Pb) – 3-Month Rolling	Non-Attainment	*
Hydrogen Sulfide (H ₂ S) – 1-Hour	*	Attainment
Sulfates – 24-Hour	*	Attainment
Vinyl Chloride – 24-Hour	*	Attainment

Note: * = Not Applicable/No Standards.

Ambient Air Quality

Local air quality can be evaluated by reviewing relevant air pollution concentrations near the Project. Table 3 summarizes published monitoring data from the Los Angeles-North Main Street Monitoring Station located at 1630 North Main Street, approximately 5.7 miles northwest of the Project site. The station monitors ambient ozone, PM₁₀, and PM_{2.5}, and NO₂.

Table 3: Los Angeles-North Main Street Monitoring Station

Air Pollutant	Averaging Time	Item	2019	2020	2021
Ozone	1-Hour	Max 1 Hour (ppm)	0.093	0.185	0.099
		Days > State Standard (0.090 ppm)	0	14	1
	8-Hour	Max 8 Hour (ppm)	0.080	0.118	0.085
		Days > State Standard (0.070 ppm)	2	22	2
		Days > National 2015 Standard (0.070 ppm)	2	22	2
		Days > National 2008 Standard (0.075 ppm)	1	16	1
PM ₁₀	24-Hour	Max 24-Hour Averages (µg/m ³)	93.9	185.2	138.5
		Annual Average (µg/m ³)	*	33.9	30.9
		Days > National 24-Hr Standard	*	*	0.0
		Days > State 24-Hr Standard	*	35.6	17.2

Air Quality and Greenhouse Gas Emissions Study

Air Pollutant	Averaging Time	Item	2019	2020	2021
PM _{2.5}	24-Hour	Max 24-Hour Averages ($\mu\text{g}/\text{m}^3$)	43.5	175.0	61.1
		Annual Average ($\mu\text{g}/\text{m}^3$)	10.8	15.0	14.8
		Days > National 24-Hr Standard	1.0	12.1	13.0
NO ₂	1 Hour	Max 1 Hour (ppb)	69.7	61.8	77.8
		Days > National 1-Hr Standard (100 ppb)	0	0	0
		Days > State 1-Hr Standard (180 ppb)	0	0	0

Notes:

$\mu\text{g}/\text{m}^3$ = micrograms per cubic meter

ppm = parts per million

ppb = part per billion

* indicates that insufficient data was available to determine the value.

2.1.3 ODORS

Typically, odors are generally regarded as an annoyance rather than a health hazard. However, manifestation of a person's reaction to foul odors can range from the physiological, including circulatory and respiratory effects, nausea, vomiting, and headache.

The ability to detect odors varies considerably among the population and overall is quite subjective. Some individuals can smell very minute quantities of specific substances; others may not have different reactions to the same odor and in fact an odor that is offensive to one person may be perfectly acceptable to another (e.g., fast food restaurant). It is important to also note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience. For instance, if a person describes an odor as flowery or sweet, then the person is describing the quality of the odor. Intensity refers to the strength of the odor. For example, a person may use the word strong to describe the intensity of an odor. Odor intensity depends on the odorant concentration in the air. When an odorous sample is progressively diluted, the odorant concentration decreases. As this occurs, the odor intensity weakens and eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant reaches a detection threshold. An odorant concentration below the detection threshold means that the concentration in the air is not detectable by the average human.

2.1.4 TOXIC AIR CONTAMINANTS

Toxic air contaminants (TACs) are air pollutants that may cause or contribute to an increase in mortality or serious illness, or which may pose a hazard to human health. TACs are usually present in minute quantities in the ambient air but, due to their high toxicity, they may pose a threat to public health even at very low concentrations. Because there is no threshold level below which adverse health impacts are not

Air Quality and Greenhouse Gas Emissions Study

expected to occur, TACs differ from criteria pollutants for which acceptable levels of exposure can be determined and for which state and federal governments have set ambient air quality standards. TACs, therefore, are not considered “criteria pollutants” under either the FCAA or the California Clean Air Act (CCAA) and are not subject to NAAQS or CAAQS ambient air quality standards. Instead, USEPA and CARB regulate hazardous air pollutants (HAPs) and TACs, respectively, through statutes and regulations that generally require the use of the maximum or best available control technology to limit emissions. In conjunction with YSAQMD rules, these federal and state statutes and regulations establish the regulatory framework for TACs. At the national level, USEPA has established National Emission Standards for Hazardous Air Pollutants (NESHAPs) in accordance with the requirements of the FCAA and subsequent amendments. These are technology-based, source-specific regulations that limit allowable emissions of HAPs.

Within California, TACs are regulated primarily through the Tanner Air Toxics Act (Assembly Bill [AB] 1807) and the Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588). AB 1807 sets forth a formal procedure for CARB to designate substances as TACs. The following provides a summary of the primary TACs of concern within the State of California and related health effects.

Diesel Particulate Matter

Diesel particulate matter (DPM) was identified as a TAC by the CARB in August 1998. DPM is emitted from both mobile and stationary sources. In California, on-road diesel-fueled vehicles contribute approximately 42 percent of the statewide total, with an additional 55 percent attributed to other mobile sources such as construction and mining equipment, agricultural equipment, and transport refrigeration units. Stationary sources, contributing about three percent of emissions, include shipyards, warehouses, heavy equipment repair yards, and oil and gas production operations. Emissions from these sources are from diesel-fueled internal combustion engines. Stationary sources that report DPM emissions also include heavy construction, manufacturers of asphalt paving materials and blocks, and diesel-fueled electrical generation facilities (CARB 2023b).

In October 2000, CARB issued a report entitled Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles, which is commonly referred to as the Diesel Risk Reduction Plan (DRRP). The DRRP provides a mechanism for combating the DPM problem. The goal of the DRRP is to reduce concentrations of DPM. The key elements of the DRRP are to clean up existing engines through engine retrofit emission control devices, to adopt stringent standards for new diesel engines, and to lower the sulfur content of diesel fuel through advanced technology emission control devices on diesel engines. When fully implemented, the DRRP will significantly reduce emissions from both old and new diesel-fueled motor vehicles and from stationary sources that burn diesel fuel. In addition to these strategies, CARB continues to promote the use of alternative fuels and electrification. As a result of these actions, DPM concentrations and associated health risks in future years are projected to decline (CARB 2023b). In comparison to year 2010 inventory of statewide DPM emissions, CARB estimates that emissions of DPM in 2035 will be reduced by more than 50 percent.

DPM is typically composed of carbon particles (also called “soot” or “black carbon”) and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of these chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene. Diesel exhaust also contains gaseous pollutants, including volatile organic compounds

Air Quality and Greenhouse Gas Emissions Study

and NOx. NOx emissions from diesel engines are important because they can undergo chemical reactions in the atmosphere leading to formation of PM_{2.5} and O₃.

In California, diesel exhaust particles have been identified as a carcinogen accounting for an estimated 70 percent of the total known cancer risks in California. DPM is estimated to increase statewide cancer risk by 520 cancer occurrences per million residents exposed over an estimated 70-year lifetime. Non-cancer health effects associated with exposure to DPM include premature death, exacerbated chronic heart and lung disease, including asthma, and decreased lung function in children. Short-term exposure to diesel exhaust can also have immediate health effects. Diesel exhaust can irritate the eyes, nose, throat and lungs, and it can cause coughs, headaches, lightheadedness, and nausea. In studies with human volunteers, diesel exhaust particles made people with allergies more susceptible to the materials to which they are allergic, such as dust and pollen. Exposure to diesel exhaust also causes inflammation in the lungs, which may aggravate chronic respiratory symptoms and increase the frequency or intensity of asthma attacks (CARB 2023b).

Individuals most vulnerable to non-cancer health effects of DPM are children whose lungs are still developing and the elderly who often have chronic health problems. The elderly and people with emphysema, asthma, and chronic heart and lung disease are especially sensitive to DPM (CARB 2023b). In addition to its health effects, DPM significantly contributes to haze and reduced visibility.

2.1.5 SENSITIVE RECEPTORS

Those who are sensitive to air pollution include children, the elderly, and persons with pre-existing respiratory or cardiovascular illness. For the purposes of CEQA, the SCAQMD considers a sensitive receptor a location that houses or attracts children, the elderly, people with illnesses, or others who are especially sensitive to the effects of air pollutants. Examples of sensitive receptors include hospitals, residences, convalescent facilities, and schools.

The nearest sensitive receptors to the Project site are residents occupying the single-family houses to the north and south of Slauson Avenue, with the closest approximately 200 feet from the site.

2.2 Regulatory Setting

Air quality within the project area is regulated by several jurisdictions including the USEPA, CARB, and the SCAQMD. Each of these jurisdictions develops rules, regulations, and policies to attain the goals or directives imposed upon them through legislation. Although USEPA regulations may not be superseded, both state and local regulations may be more stringent.

2.2.1 FEDERAL

U.S. Environmental Protection Agency

At the federal level, the USEPA has been charged with implementing national air quality programs. The USEPA's air quality mandates are drawn primarily from the FCAA, which was signed into law in 1970. Congress substantially amended the FCAA in 1977 and again in 1990.

Air Quality and Greenhouse Gas Emissions Study

Federal Clean Air Act

The FCAA required the USEPA to establish NAAQS, and also set deadlines for their attainment. Two types of NAAQS have been established: primary standards, which protect public health, and secondary standards, which protect public welfare from non-health-related adverse effects, such as visibility restrictions. NAAQS are summarized in Table 1.

National Emission Standards for Hazardous Air Pollutants

Pursuant to the FCAA of 1970, the USEPA established the NESHAPs. These are technology-based source-specific regulations that limit allowable emissions of HAPs. Among these sources include asbestos-containing building materials (ACBMs). NESHAPs include requirements pertaining to the inspection, notification, handling, and disposal of ACBMs associated with the demolition and renovation of structures.

Non-Road Diesel Rule

The USEPA has established a series of increasingly strict emissions standards for new off-road diesel equipment, on-road diesel trucks, and locomotives. New construction equipment used for the Project, including heavy-duty trucks and off-road construction equipment, would be required to comply with the emissions standards.

2.2.2 STATE

California Air Resources Board

The CARB is the agency responsible for coordination and oversight of state and local air pollution control programs in California and for implementing the CCAA of 1988. Other CARB duties include monitoring air quality (in conjunction with air monitoring networks maintained by air pollution control districts and air quality management districts), establishing CAAQS, which in many cases are more stringent than the NAAQS, and setting emissions standards for new motor vehicles. The emission standards established for motor vehicles differ depending on various factors including the model year, and the type of vehicle, fuel and engine used. The CAAQS are summarized in Table 1.

California Clean Air Act

The CCAA requires that all air districts in the state endeavor to achieve and maintain CAAQS for O₃, CO, SO₂, and NO₂ by the earliest practical date. The CCAA specifies that districts focus attention on reducing the emissions from transportation and area-wide emission sources, and the act provides districts with authority to regulate indirect sources. Each district plan is required to either (1) achieve a 5 percent annual reduction, averaged over consecutive 3-year periods, in district-wide emissions of each non-attainment pollutant or its precursors, or (2) to provide for implementation of all feasible measures to reduce emissions. Any planning effort for air quality attainment would thus need to consider both state and federal planning requirements.

Air Quality and Greenhouse Gas Emissions Study

Assembly Bills 1807 & 2588 - Toxic Air Contaminants

Within California, TACs are regulated primarily through AB 1807 (Tanner Air Toxics Act) and AB 2588 (Air Toxics Hot Spots Information and Assessment Act of 1987). The Tanner Air Toxics Act sets forth a formal procedure for CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB designates a substance as a TAC.

Existing sources of TACs that are subject to the Air Toxics Hot Spots Information and Assessment Act are required to: (1) prepare a toxic emissions inventory; (2) prepare a risk assessment if emissions are significant; (3) notify the public of significant risk levels; and (4) prepare and implement risk reduction measures.

Assembly Bill 617

In response to AB 617 (C. Garcia, Chapter 136, Statutes of 2017), the CARB established the Community Air Protection Program. The Community Air Protection Program includes community air monitoring and community emissions reduction program's focus is to reduce exposure in communities most impacted by air pollution. The Legislature has appropriated funding to support early actions to address localized air pollution through targeted incentive funding to deploy cleaner technologies in these communities, as well as grants to support community participation in the AB 617 process. AB 617 also includes new requirements for accelerated retrofit of pollution controls on industrial sources, increased penalty fees, and greater transparency and availability of air quality and emissions data, which will help advance air pollution control efforts throughout the State.

Regulatory Attainment Designations

Under the CCAA, CARB is required to designate areas of the state as attainment, nonattainment, or unclassified with respect to applicable standards. An "attainment" designation for an area signifies that pollutant concentrations did not violate the applicable standard in that area. A "nonattainment" designation indicates that a pollutant concentration violated the applicable standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. Depending on the frequency and severity of pollutants exceeding applicable standards, the nonattainment designation can be further classified as serious nonattainment, severe nonattainment, or extreme nonattainment, with extreme nonattainment being the most severe of the classifications. An "unclassified" designation signifies that the data does not support either an attainment or nonattainment designation. The CCAA divides districts into moderate, serious, and severe air pollution categories, with increasingly stringent control requirements mandated for each category.

The USEPA designates areas for O₃, CO, and NO₂ as "does not meet the primary standards," "cannot be classified," or "better than national standards." For SO₂, areas are designated as "does not meet the primary standards," "does not meet the secondary standards," "cannot be classified," or "better than national standards." However, CARB terminology of attainment, nonattainment, and unclassified is more frequently used. The USEPA uses the same sub-categories for nonattainment status: serious, severe, and extreme. In 1991, USEPA assigned new nonattainment designations to areas that had previously been classified as Group I, II, or III for PM₁₀ based on the likelihood that they would violate national PM₁₀ standards. All other areas are designated "unclassified."

Air Quality and Greenhouse Gas Emissions Study

As noted previously, the SCAB is designated non-attainment for both the federal and state standards for O₃ and PM_{2.5}, the state standard for PM₁₀, and the federal standard for lead (SCAQMD 2016).

Low-Emission Vehicle Program

The CARB first adopted Low-Emission Vehicle (LEV) program standards in 1990. These first LEV standards ran from 1994 through 2003. LEV II regulations, running from 2004 through 2010, represent continuing progress in emission reductions. As the State's passenger vehicle fleet continues to grow and more sport utility vehicles and pickup trucks are used as passenger cars rather than work vehicles, the more stringent LEV II standards were adopted to provide reductions necessary for California to meet federally mandated clean air goals outlined in the 1994 State Implementation Plan (SIP). In 2012, CARB adopted the LEV III amendments to California's LEV regulations. These amendments include more stringent emission standards for both criteria pollutants and greenhouse gases for new passenger vehicles.

On-Road Heavy-Duty Vehicle Program

The CARB has adopted standards for emissions from various types of new on-road heavy-duty vehicles. Section 1956.8, Title 13, California Code of Regulations contains California's emission standards for on-road heavy-duty engines and vehicles, and test procedures. CARB has also adopted programs to reduce emissions from in-use heavy-duty vehicles including the Heavy-Duty Diesel Vehicle Idling Reduction Program, the Heavy-Duty Diesel In-Use Compliance Program, the Public Bus Fleet Rule and Engine Standards, and the School Bus Program and others.

In addition, the CARB's Truck and Bus regulation was established to meet federal attainment standards. This regulation requires heavy-duty diesel vehicles that operate in California to reduce TAC emissions from their exhaust. Diesel exhaust is responsible for 70 percent of the cancer risk from airborne toxics. Therefore, as of January 1, 2023, nearly all trucks and buses are required to have 2010 or newer model year engines to reduce PM and NOx emissions. To help ensure that the benefits of this regulation are achieved, starting in 2020, only vehicles compliant with this regulation were registered by the California Department of Motor Vehicles.

Naturally-Occurring Asbestos Regulations

CARB has adopted two Airborne Toxic Control Measures (ATCMs) which regulates the control of Naturally Occurring Asbestos (NOA) associated with construction, surfacing, grading, mining, and quarrying activities. The SCAQMD is responsible for enforcing Asbestos ATCMs. There are no known likely areas of NOA in the Project area (USGS 2011).

2.2.3 REGIONAL

South Coast Air Quality Management District

The SCAQMD is the agency primarily responsible for ensuring that NAAQS and CAAQS are not exceeded, and the air quality conditions are maintained in the SCAB. Responsibilities of SCAQMD include, but not limited to, preparing plans for the attainment of ambient air quality standards, adopting

Air Quality and Greenhouse Gas Emissions Study

and enforcing rules and regulations concerning sources of air pollution, issuing permits for stationary sources of air pollution, inspecting stationary sources of air pollution, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, and implementing programs and regulations required by the FCAA and the CCAA.

SCAQMD 2022 Air Quality Management Plan

SCAB is designated as non-attainment for both federal and state standards for O₃ and PM_{2.5}, the state standard for PM₁₀, and the federal standard for lead. Because the SCAB currently exceeds these NAAQS and CAAQS, the SCAQMD is required to implement strategies to reduce pollutant levels to recognized acceptable standards. The most recent air plan is the 2022 Air Quality Management Plan (AQMP), created in conjunction with the Southern California Association of Governments (SCAG), CARB, and USEPA to meet federal ozone and PM_{2.5} standards.

The 2022 AQMP accounts for projected population growth and predicted future emissions in energy and transportation demand, and determined control strategies for the eventual achievement of the NAAQS attainment designations. These control strategies are either organized into the SCAQMD rules and regulations, or otherwise set forth as formal SCAQMD recommendations to other agencies. The 2022 AQMP includes policies that are consistent with the SCAQMD and specify review according to the recommendations of SCAQMD guidelines. Other policies are aimed at reducing transportation emissions and emissions from major stationary sources (SCAQMD 2022).

SCAQMD Rules and Regulations

The SCAQMD rules are regulations that may apply to the Project include, but are not limited to, the following:

- **Rule 401: Visible Emissions.** This rule prohibits discharges of visible air contaminants from any single source.
- **Rule 402: Nuisance.** This rule prohibits the discharge from any source such quantities of air contaminants or other materials which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public.
- **Rule 403: Fugitive Dust.** The purpose of this Rule is to reduce the amount of particulate matter in the ambient air as a result of anthropogenic fugitive dust sources by requiring actions to prevent, reduce, or mitigate fugitive dust emissions.

3 Greenhouse Gas Emissions

3.1 Environmental Setting

To fully understand global climate change, it is important to recognize the naturally occurring “greenhouse effect” and to define the GHGs that contribute to this phenomenon. Various gases in the earth’s atmosphere, classified as atmospheric GHGs, play a critical role in determining the earth’s surface temperature. Solar radiation enters the earth’s atmosphere from space and a portion of the radiation is absorbed by the earth’s surface. The earth emits this radiation back toward space, but the properties of the radiation change from high-frequency solar radiation to lower-frequency infrared radiation. GHGs, which are transparent to solar radiation, are effective in absorbing infrared radiation. As a result, this radiation that otherwise would have escaped back into space is now retained, resulting in a warming of the atmosphere. This phenomenon is known as the greenhouse effect.

3.1.1 GREENHOUSE GASES

Among the prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), nitrogen trifluoride (NF₃), and sulfur hexafluoride (SF₆). Primary GHGs attributed to global climate change are discussed in the following subsections.

Carbon Dioxide. CO₂ is a colorless, odorless gas. CO₂ is emitted in a number of ways, both naturally and through human activities. The largest source of CO₂ emissions globally is the combustion of fossil fuels such as coal, oil, and gas in power plants, automobiles, industrial facilities, and other sources. A number of specialized industrial production processes and product uses such as mineral production, metal production, and the use of petroleum-based products can also lead to CO₂ emissions. The atmospheric lifetime of CO₂ is variable because it is so readily exchanged in the atmosphere (USEPA 2023a).

Methane. CH₄ is a colorless, odorless gas that is not flammable under most circumstances. CH₄ is the major component of natural gas, about 87 percent by volume. It is also formed and released to the atmosphere by biological processes occurring in anaerobic environments. CH₄ is emitted from a variety of both human-related and natural sources. Human-related sources include fossil fuel production, animal husbandry (enteric fermentation in livestock and manure management), rice cultivation, biomass burning, and waste management. These activities release significant quantities of methane to the atmosphere. Natural sources of methane include wetlands, gas hydrates, permafrost, termites, oceans, freshwater bodies, non-wetland soils, and other sources such as wildfires. The atmospheric lifetime of CH₄ is about 12 years (USEPA 2023a).

Nitrous Oxide. N₂O is a clear, colorless gas with a slightly sweet odor. N₂O is produced by both natural and human-related sources. Primary human-related sources of N₂O are agricultural soil management, animal manure management, sewage treatment, mobile and stationary combustion of fossil fuels, adipic acid production, and nitric acid production. N₂O is also produced naturally from a wide variety of biological sources in soil and water, particularly microbial action in wet tropical forests. The atmospheric lifetime of N₂O is approximately 120 years (USEPA 2023a).

Air Quality and Greenhouse Gas Emissions Study

Hydrofluorocarbons. HFCs are man-made chemicals, many of which have been developed as alternatives to ozone-depleting substances for industrial, commercial, and consumer products. The only significant emissions of HFCs before 1990 were of the chemical HFC-23, which is generated as a byproduct of the production of HCFC-22 (or Freon 22, used in air conditioning applications). The atmospheric lifetime for HFCs varies from just over a year for HFC-152a to 260 years for HFC-23. Most of the commercially used HFCs have atmospheric lifetimes of less than 15 years (e.g., HFC-134a, which is used in automobile air conditioning and refrigeration, has an atmospheric life of 14 years) (USEPA 2023a).

Perfluorocarbons. PFCs are colorless, highly dense, chemically inert, and nontoxic. There are seven PFC gases: perfluoromethane (CF₄), perfluoroethane (C₂F₆), perfluoropropane (C₃F₈), perfluorobutane (C₄F₁₀), perfluorocyclobutane (C₄F₈), perfluoropentane (C₅F₁₂), and perfluorohexane (C₆F₁₄). Natural geological emissions have been responsible for the PFCs that have accumulated in the atmosphere in the past; however, the largest current source is aluminum production, which releases CF₄ and C₂F₆ as byproducts. The estimated atmospheric lifetimes for CF₄ and C₂F₆ are 50,000 and 10,000 years, respectively (USEPA 2023a).

Nitrogen Trifluoride. NF₃ is an inorganic, colorless, odorless, toxic, nonflammable gas used as an etchant in microelectronics. NF₃ is predominantly employed in the cleaning of the plasma-enhanced chemical vapor deposition chambers in the production of liquid crystal displays and silicon-based thin film solar cells. In 2009, NF₃ was listed by California as a potential GHG to be listed and regulated under AB 32 (Section 38505 Health and Safety Code).

Sulfur Hexafluoride. SF₆ is an inorganic compound that is colorless, odorless, nontoxic, and generally nonflammable. SF₆ is primarily used as an electrical insulator in high voltage equipment. The electric power industry uses roughly 80percent of all SF₆ produced worldwide. Leaks of SF₆ occur from aging equipment and during equipment maintenance and servicing. SF₆ has an atmospheric life of 3,200 years (USEPA 2023b).

Black Carbon. Black carbon is the most strongly light-absorbing component of PM emitted from burning fuels such as coal, diesel, and biomass. Black carbon contributes to climate change both directly by absorbing sunlight and indirectly by depositing on snow and by interacting with clouds and affecting cloud formation. Black carbon is considered a short-lived species, which can vary spatially and, consequently, it is very difficult to quantify associated global-warming potentials. The main sources of black carbon in California are wildfires, off-road vehicles (locomotives, marine vessels, tractors, excavators, dozers, etc.), on-road vehicles (cars, trucks, and buses), fireplaces, agricultural waste burning, and prescribed burning (planned burns of forest or wildlands). California has been an international leader in reducing emissions of black carbon, including programs that target reducing PM from diesel engines and burning activities (CARB 2013).

3.1.2 GLOBAL WARMING POTENTIAL

Each GHG differs in its ability to absorb heat in the atmosphere based on the lifetime, or persistence, of the gas molecule in the atmosphere. Often, estimates of GHG emissions are presented in carbon dioxide equivalents (CO₂e), which weight each gas by its global warming potential (GWP).

Air Quality and Greenhouse Gas Emissions Study

Expressing GHG emissions in CO₂e takes the contribution of all GHG emissions to the greenhouse gas effect and converts them to a single unit equivalent to the effect that would occur if only CO₂ were being emitted. Based on a 100-year time horizon, CH₄ traps over 25 times more heat per molecule than CO₂ were being emitted, and N₂O absorbs approximately 298 times more heat per molecules than CO₂. Additional GHGs with high GWP include NF₃, SF₆, PFCs, and black carbon.

3.1.3 SOURCES OF GREENHOUSE GAS EMISSIONS

On a global scale, GHG emissions are predominantly associated with activities related to energy production; changes in land use, such as deforestation and land clearing; industrial sources; agricultural activities; transportation; waste and wastewater generation; and commercial and residential land uses. World-wide, energy production including the burning of coal, natural gas, and oil for electricity and heat is the largest single source of global GHG emissions.

United States of America

In 2021, GHG emissions in the U.S. totaled 6,340.2 million metric tons (MMT) of CO₂e. Within the U.S., the largest contributor to GHG emissions is the transportation sector (28 percent). The next largest contributors are from electricity production (25 percent) and industry (23 percent), followed by the commercial and residential sector (13 percent) and the agricultural sector (10 percent). Transportation emissions primarily come from burning fossil fuels for our cars, trucks, ships, trains, and planes. Over 90 percent of the fuel used for transportation is petroleum-based, which includes primarily gasoline and diesel. The bulk of emissions generated from energy production come from burning fossil fuels, mostly coal and natural gas. Industry emissions are also primarily generated from fossil fuels burned for heat, the use of certain products that contain GHGs, and the handling of waste. Similar to industry sector emissions, commercial and residential uses arise primarily from fossil fuels for heat, the use of certain products that contain GHGs, and the handling of waste. Agricultural emissions come from livestock such as cows, agricultural soil, and rice production. The land use and forestry sector within the U.S. serves as a carbon sink. Carbon sinks absorb CO₂ from the atmosphere. Land areas across the U.S. absorbed approximately 12 percent of the 2021 GHG emissions (USEPA 2023c).

California

In 2020, GHG emissions within California totaled 369.2 MMT of CO₂e. Similar to national emissions, in California, the transportation sector is the largest contributor. Transportation emissions account for approximately 37 percent of the total statewide GHG emissions. The majority of transportation emissions are derived from passenger vehicles and heavy-duty trucks. Emissions associated with industrial uses are the second largest contributor, totaling roughly 20 percent. Industrial emissions are driven by fuel combustion from sources that include refineries, oil and gas extraction, cement plants, and the portion of cogeneration emissions attribution to thermal energy output. Electricity generation (in state and imports) totaled roughly 16 percent. Emissions from the electricity generation sector have declined over the years due to the increase in renewable generation that continues to replace fossil power (CARB 2022a).

3.1.4 EFFECTS OF GLOBAL CLIMATE CHANGE

There are uncertainties as to exactly what the climate changes will be in various local areas of the earth. There are also uncertainties associated with the magnitude and timing of other consequences of a warmer planet: sea level rise, spread of certain diseases out of their usual geographic range, the effect on agricultural production, water supply, sustainability of ecosystems, increased strength and frequency of storms, extreme heat events, increased air pollution episodes, and the consequence of these effects on the economy.

Within California, climate changes would likely alter the ecological characteristics of many ecosystems throughout the state. Such alterations would likely include increases in surface temperatures and changes in the form, timing, and intensity of precipitation. For instance, historical records are depicting an increasing trend toward earlier snowmelt in the Sierra Nevada. This snowpack is a principal supply of water for the state, providing roughly 50 percent of state's annual runoff. If this trend continues, some areas of the state may experience an increased danger of floods during the winter months and possible exhaustion of the snowpack during spring and summer months. An earlier snowmelt would also impact the state's energy resources. An early exhaustion of the Sierra snowpack may force electricity producers to switch to more costly or non-renewable forms of electricity generation during spring and summer months. A changing climate may also impact agricultural crop yields, coastal structures, and biodiversity. As a result, resultant changes in climate will likely have detrimental effects on some of California's largest industries, including agriculture, wine, tourism, skiing, recreational and commercial fishing, and forestry.

3.2 Regulatory Setting

There are considerable regulatory actions regarding GHGs and climate change at the state and local level. The following includes the key state and regional regulations applicable to the Project.

3.2.1 STATE

Assembly Bill 32 and Senate Bill 32

AB 32 requires that GHGs emitted in California be reduced to 1990 levels by the year 2020. GHGs, as defined under AB 32, include CO₂, CH₄, NO_x, HFCs, PFCs, and SF₆. Since AB 32 was enacted, a seventh chemical, NF₃, has also been added to the list of GHGs. CARB is the state agency charged with monitoring and regulating sources of GHGs. AB 32 states the following:

Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.

CARB approved the 1990 GHG emissions level of 427 MMTCO₂e on December 6, 2007. Therefore, to meet the state's target, emissions generated in California in 2020 were required to be equal to or less

Air Quality and Greenhouse Gas Emissions Study

than 427 MMTCO₂e. In order to set a framework for the state to meet this target, CARB was tasked with creating a Scoping Plan (as described below). California announced in July 2018 that the state emitted 427 MMTCO₂e in 2016 and achieved AB 32 goals (CARB 2018a).

Senate Bill (SB) 32 was signed into law on September 8, 2016. SB 32 states that “In adopting rules and regulations to achieve the maximum technologically feasible and cost-effective GHG emissions reductions authorized by this division, the state [air resources] board shall ensure that statewide GHG emissions are reduced to at least 40 percent below the statewide GHG emissions limit no later than December 31, 2030.”

Assembly Bill 1279: The California Climate Crisis

AB 1279 was signed into law in 2022 and establishes the policy of the State to achieve carbon neutrality as soon as possible, but no later than 2045 and maintain net negative GHG emissions thereafter. AB 1279 would also ensure that by 2045 the statewide anthropogenic GHG emissions are reduced by at least 85 percent below 1990 levels. The bill would require CARB to ensure that an updated Scoping Plan identifies and recommends measures to achieve carbon neutrality, and to identify and implement policies and strategies that enable carbon dioxide removal and carbon capture, utilization, and storage technologies to complement AB 1279’s emissions reduction requirements.

2022 Climate Change Scoping Plan

The 2022 Scoping Plan was approved in December 2022 and assesses progress toward achieving the SB 32 2030 target and laying out a path to achieve carbon neutrality no later than 2045. The 2022 Scoping Plan focuses on outcomes needed to achieve carbon neutrality by assessing paths for clean technology, energy deployment, natural and working lands, and others, and is designed to meet the State’s long-term climate objectives and support a range of economic, environmental, energy security, environmental justice, and public health priorities (CARB 2022b).

Cap-and-Trade Program

CARB administers the state’s cap-and-trade program, which covers GHG sources that emit more than 25,000 metric tons of carbon dioxide equivalent per year (MTCO₂e/year), such as refineries, power plants, and industrial facilities. This market-based approach to reducing GHG emissions provides economic incentives for achieving GHG emission reductions.

Senate Bill 375: The Sustainable Communities and Climate Protection Act of 2008

SB 375 was signed into law on September 30, 2008. According to SB 375, the transportation sector is the largest contributor of GHG emissions, which emits more than 40 percent of the total GHG emissions in California. SB 375 states that, “without improved land use and transportation policy, California will not be able to achieve the goals of AB 32.” SB 375 does the following: (1) requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing GHG emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies.

Air Quality and Greenhouse Gas Emissions Study

CARB has prepared a Proposed Update to the SB 375 Greenhouse Gas Emission Reduction Targets in 2018 which set updated GHG reduction targets for metropolitan planning organizations for 2020 and 2035 (CARB 2023c). Pursuant to SB 375, the reduction targets for per capita vehicular emissions for the SCAG planning area were 8 percent by 2020 and are 19 percent by 2035.

Assembly Bill 1493: Pavley Regulations and Fuel Efficiency Standards

AB 1493, enacted on July 22, 2002, required CARB to develop and adopt regulations and fuel efficiency standards that reduce GHGs emitted by passenger vehicles and light duty trucks. Implementation of the regulation was delayed by lawsuits filed by automakers and by USEPA's denial of an implementation waiver. USEPA subsequently granted the requested waiver in 2009, which was upheld by the by the U.S. District Court for the District of Columbia in 2011.

The standards were phased in during the 2009 through 2016 model years. When fully phased in, the near-term (2009–2012) standards resulted in an approximately 22 percent reduction compared with the 2002 fleet, and the mid-term (2013–2016) standards resulted in about a 30 percent reduction. Several technologies stand out as providing significant reductions in emissions at favorable costs. These include discrete variable valve lift or camless valve actuation to optimize valve operation, rather than relying on fixed valve timing and lift as has historically been done; turbocharging to boost power and allow for engine downsizing; improved multi-speed transmissions; and improved air conditioning systems that operate optimally, leak less, and/or use an alternative refrigerant.

The second phase of the implementation for AB 1493 was incorporated into Amendments to the Low-Emission Vehicle Program, referred to as LEV III or the Advanced Clean Cars program. The Advanced Clean Cars program combines the control of smog-causing pollutants and GHG emissions into a single coordinated package of requirements for model years 2017 through 2025. The regulation would reduce GHGs from new cars by 34 percent from 2016 levels by 2025. The rules would reduce pollutants from gasoline and diesel-powered cars and would deliver increasing numbers of zero-emission technologies, such as full battery electric cars, newly emerging plug-in hybrid electric vehicles, and hydrogen fuel cell cars. The regulations would also provide adequate fueling infrastructure for the increasing numbers of hydrogen fuel cell vehicles planned for deployment in California.

Senate Bill 1368: Emission Performance Standards

Enacted in 2006, SB 1368 directs the California Public Utilities Commission to adopt a performance standard for GHG emissions for the future power purchases of California utilities. SB 1368 seeks to limit carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than five years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant.

Because of the carbon content of its fuel source, a coal-fired plant cannot meet this standard because such plants emit roughly twice as much carbon as natural gas, combined cycle plants. Accordingly, the law effectively prevents California's utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the state. The California Public Utilities Commission adopted the regulations required by SB 1368 on August 29, 2007. The regulations

Air Quality and Greenhouse Gas Emissions Study

implementing SB 1368 establish a standard for baseload generation owned by, or under long-term contract to publicly owned utilities, of 1,100 pounds of CO₂ per megawatt-hour.

Senate Bill 1078: Renewable Electricity Standards

SB 1078 (September 12, 2002) required California to generate 20 percent of its electricity from renewable energy by 2017. SB 107 changed the due date to 2010 instead of 2017. On November 17, 2008, the governor signed Executive Order (EO) S-14-08, which established the Renewable Portfolio Standard (RPS) target for California requiring that all retail sellers of electricity serve 33 percent of their load with renewable energy by 2020. EO S-21-09 directed CARB to adopt a regulation by July 31, 2010, requiring the state's load serving entities to meet a 33 percent renewable energy target by 2020. CARB approved the Renewable Electricity Standard on September 23, 2010, by Resolution 10-23. In 2011, the state legislature adopted this higher standard in SB X1-2. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas.

Senate Bill 350: Clean Energy and Pollution Reduction Act of 2015

SB 350 (October 7, 2015) reaffirms California's commitment to reducing its GHG emissions and addressing climate change. Key provisions include an increase in the RPS, higher energy efficiency requirements for buildings, initial strategies toward a regional electricity grid, and improved infrastructure for electric vehicle charging stations.

Senate Bill 100: California Renewables Portfolio Standard Program

SB 100 (September 10, 2018) revised the RPS goals to achieve the 50 percent renewable resources target by December 31, 2026, and to achieve a 60 percent target by December 31, 2030. The bill requires that retail sellers and local publicly owned electric utilities procure a minimum quantity of electricity products from eligible renewable energy resources so that the total kilowatt hours of those products sold to their retail end-use customers achieve 44 percent of retail sales by December 31, 2024; 52 percent by December 31, 2027; and 60 percent by December 31, 2030. The bill also establishes a state policy that eligible renewable energy resources and zero-carbon resources supply 100 percent of all retail sales of electricity to California end-use customers and 100 percent of electricity procured to serve all State agencies by December 31, 2045. Under the bill, the State cannot increase carbon emissions elsewhere in the western grid or allow resource shuffling to achieve the 100 percent carbon-free electricity target.

Executive Order S-01-07: Low Carbon Fuel Standard

EO S-01-07 was signed on January 18, 2007. The EO mandates that a statewide goal shall be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. In particular, the EO established a Low Carbon Fuel Standard (LCFS) and directed the Secretary for Environmental Protection to coordinate the actions of the California Energy Commission, CARB, the University of California, and other agencies to develop and propose protocols for measuring the "life-cycle carbon intensity" of transportation fuels. This analysis supporting development of the protocols was included in an implementation plan for the State Alternative Fuels Plan adopted by California Energy Commission on December 24, 2007, and was submitted to CARB for consideration as an "early action" item under AB 32. CARB adopted the LCFS on April 23, 2009.

Air Quality and Greenhouse Gas Emissions Study

The LCFS was subject to legal challenge in 2011. Ultimately, CARB was required to bring a new LCFS regulation for consideration in February 2015. The proposed LCFS regulation was required to contain revisions to the 2010 LCFS and new provisions designed to foster investments in the production of the low-carbon fuels, offer additional flexibility to regulated parties, update critical technical information, simplify and streamline program operations, and enhance enforcement. The Office of Administrative Law approved the regulation on November 16, 2015. The regulation was last amended in 2018. The 2018 amendments strengthen the carbon intensive fuel reduction targets beyond 2020 to support SB 32. Other major changes to the 2018 amendments include expanding the fuel types and eligible activities to participate in the LCFS (CARB 2018b).

Executive Order S-13-08: Climate Adaptation Strategy

EO S-13-08 states that “climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California’s economy, to the health and welfare of its population and to its natural resources.” Pursuant to the requirements in this EO, the 2009 California Climate Adaptation Strategy was adopted, which is the “... first statewide, multi-sector, region-specific, and information-based climate change adaptation strategy in the United States.” Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Executive Order B-48-18

In January 2018, Governor Brown signed EO B-48-18 requiring all State entities to work with the private sector to have at least 5 million zero emission vehicles (ZEVs) on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 electric vehicle charging stations by 2025. It specifies that 10,000 of the electric-vehicle charging stations should be direct current fast chargers. This order also requires all State entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. The Governor’s Office of Business and Economic Development is required to publish a Plug-in Charging Station Design Guidebook and update the 2015 Hydrogen Station Permitting Guidebook to aid in these efforts. All State entities are required to participate in updating the 2016 Zero-Emissions Vehicle Action Plan to help expand private investment in ZEV infrastructure with a focus on serving low-income and disadvantaged communities. Additionally, all state entities are to support and recommend policies and actions to expand ZEV infrastructure at residential land uses, through the LCFS Program and recommend how to ensure affordability and accessibility for all drivers.

Executive Order N-79-20

In September 2020, Governor Newsom signed EO N-79-20, which sets the following goals for the State: 100 percent of in-state sales of new passenger cars and trucks shall be zero-emission by 2035; 100 percent of medium- and heavy-duty vehicles in the State shall be zero-emission by 2045 for all operations where feasible and by 2035 for drayage trucks; and 100 percent of off-road vehicles and equipment in the State shall be zero-emission by 2035, where feasible.

3.2.2 REGIONAL

SCAG Regional Transportation Plan/Sustainable Communities Strategy

The SCAG is the designated Metropolitan Planning Organization for the following six counties: Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura. The SCAG develops long-range regional transportation plans, including sustainable communities strategies pursuant to SB 375, growth forecast components, regional transportation improvement programs, regional housing needs allocations, and a portion of the SCAQMD air quality plans (SCAG 2023).

In September 2020, the SCAG Regional Council approved the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), which is entitled Connect SoCal. Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies to increase mobility options and achieve a more sustainable growth pattern. Implementation of Connect SoCal is projected to achieve a 19 percent reduction in GHG emissions per capita by 2035 compared to the year 2005. Some of the specific goals of Connect SoCal which are applicable to the Project include improving mobility and travel safety for people and goods (Goal 2), reducing GHG emissions and improving air quality (Goal 5), and encouraging more efficient travel (Goal 8) (SCAG 2020).

4 Methodologies and Thresholds

4.1 Methodology

4.1.1 CONSTRUCTION

Project construction emissions were estimated using Sacramento Metropolitan Air Quality Management District's (SMAQMD) Roadway Construction Model, Version 9.0.0. The SMAQMD Roadway Construction Model relies on vehicle emission factors from EMFAC2017 Version 1.0.2 and off-road equipment types, horsepower, and load factors consistent with CalEEMod default values. It is noted that the SMAQMD Roadway Construction Model is an industry-standard model for estimating emissions from roadway construction projects throughout the state.

Project construction was assumed to begin in 2024 and to occur over a 12-month period. The Project length was measured to be approximately 1.1 miles, and the total disturbance area would be 1.49 acres. Construction is expected to require approximately 850 cubic yards of soil export and approximately 750 cubic yards of asphalt import. The haul trucks were assumed to have a capacity of 20 cubic yards per truck. Construction equipment use, worker trips, and vendor trips were based on model default assumptions. Consistent with SCAQMD Rule 403, water trucks were assumed to be used during ground-disturbing activities (SCAQMD 2005).

4.1.2 OPERATION

The Project would involve the construction of improvements to intersections along Slauson Avenue. The Project would not result in an increase in vehicle traffic, and the only emissions that would occur during operations on the Project site would be VOC off-gassing emissions from asphalt. The VOC off-gassing emissions would be similar to what already occurs under existing conditions. As a result, operational emissions were not quantified and are not evaluated in this analysis because they are expected to be equivalent to those that already occur under baseline conditions.

4.2 Thresholds

4.2.1 AIR QUALITY

The SCAQMD has adopted mass daily thresholds of significance for NO_x, VOC, PM₁₀, PM_{2.5}, SO_x, CO, and Pb, as well as Localized Significance Thresholds (LSTs) for NO_x, PM₁₀, PM_{2.5}, and CO, to determine the significance of a project's potential air quality impacts. The LSTs are intended to represent the maximum emissions from a project that would not cause or contribute to an exceedance of the CAAQS or NAAQS, and were developed based on the ambient concentrations of each criteria pollutant at specific source receptor areas. It is noted that the use of LSTs is a voluntary approach to analysis and may implemented at the discretion of local agencies (SCAQMD 2008a).

Table 4, below, presents the mass daily thresholds and the voluntary LSTs applied to the Project and used for purposes of this analysis. The LSTs are based on a one-acre site with a 50-meter receptor distance in

Air Quality and Greenhouse Gas Emissions Study

the Central LA area (Site Receptor Area 1).¹ The closest sensitive receptor is approximately 200 feet (60 meters) from the Project site.

Table 4: SCAQMD Air Quality Significance Thresholds

Thresholds	Emissions (lbs/day)						
Mass Emissions Thresholds ¹	VOC	NO _x	SO _x	CO	PM ₁₀	PM _{2.5}	Pb
Construction	75	100	150	550	150	55	3
Operation	55	55	150	550	150	55	3
Localized Significance Thresholds ²	VOC	NO _x	SO _x	CO	PM ₁₀	PM _{2.5}	Pb
Construction	N/A	74	N/A	882	15	5	N/A
Operation	N/A	74	N/A	882	4	2	N/A

Notes: N/A = not applicable

1. Source: SCAQMD 1993.
2. Source: SCAQMD 2009.

4.2.2 GREENHOUSE GAS EMISSIONS

After the adoption of AB 32, the SCAQMD established a GHG working group to develop thresholds of significance for the analysis of GHG emissions. In December 2008, the SCAQMD Board adopted the Interim CEQA Greenhouse Gas Significance Threshold, which established a screening threshold of 10,000 MTCO_{2e}/year for industrial projects and 3,000 MTCO_{2e}/year for residential and commercial projects (SCAQMD 2008b). Additionally, the SCAQMD working group recommended that instead of an individual construction GHG threshold, construction emissions should be amortized over the life of the project (30 years) and evaluated with a project's annual, operational GHG emissions. As noted previously, this analysis does not evaluate operational GHG emissions from the Project as they would not differ from existing conditions. In order to present a conservative analysis, total Project construction GHG emissions are compared to the lesser screening threshold of 3,000 MTCO_{2e}/year.

¹ The proposed Project is expected to result in approximately 1.49 acres of permanent disturbance. SCAQMD provides LSTs for sites that are 1, 2, and 5 acres in size. The thresholds for the 1-acre site are the smallest and, thus, most conservative of the LSTs. As a result, the LSTs for a 1-acre site are appropriate for the proposed Project.

5 Evaluation of Environmental Impacts

This document evaluates the potential air quality and GHG emission impacts related to the Project.

5.1 Air Quality

Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is a nonattainment area for an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

5.1.1 Impact Analysis

a. *Conflict with or obstruct implementation of the applicable air quality plan?*

Less than Significant Impact. Air districts are required to prepare air quality plans to identify strategies to bring regional emissions into compliance with the CAAQS and NAAQS. Air districts establish emissions thresholds for individual projects to demonstrate the point at which a project would be considered to increase the air quality violations. A project would conflict with the applicable air quality plan if they exceeded any emissions thresholds for which the region is in nonattainment for.

As noted previously, the SCAB is designated as a non-attainment area for both the federal and state standards for O₃ and PM_{2.5}, the state standard for PM₁₀, and the federal standard for lead (SCAQMD 2018). Accordingly, SCAQMD has prepared air quality plans, including the 2022 AQMP, to achieve attainment of the applicable ozone and PM standards. The SCAQMD's adopted thresholds of significance indicate the levels of emissions that projects may emit while the region still moves towards attainments of the CAAQS and NAAQS. Projects that exceed thresholds would be considered to potentially conflict with the 2022 AQMP.

The Project consists of the construction of improvements to the Slauson Avenue/Atlantic Boulevard intersection, as well as minor improvements to several other intersections along Slauson Avenue. Project emissions would be generated during construction from off-road equipment as well as fugitive dust from earth-moving activities. As shown under Impact b, Project construction emissions would be

Air Quality and Greenhouse Gas Emissions Study

below the applicable SCAQMD mass emissions thresholds of significance and, as shown under Impact c, Project construction emissions would also be below the SCAQMD LSTs. Moreover, as an intersection improvement project, the Project would not increase population, housing, employment, or vehicle trips in the region and would not affect the emissions projections included in the 2022 AQMP. Consequently, the Project would not conflict with or obstruct implementation of the applicable air quality plan and the potential impact would be less than significant.

- b. *Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?*

Less than Significant Impact. The Project is a construction project and would not result in an operational phase that would generate emissions that differ from existing conditions. Implementation of the Project would not increase population, housing, employment, or vehicle trips in the region, and roadway maintenance activities are expected to be similar to what already occurs. It is noted that VOC off-gassing emissions would occur following asphalt paving of the Project site. However, the difference in off-gassing emissions compared to what already occurs under existing conditions would be negligible. Therefore, no air quality impact would occur related to Project operations, and the following discussion focuses on construction emissions of criteria pollutants.

Construction activities associated with the Project would result in emissions of criteria pollutants due to the use of off-road equipment, heavy-duty haul trucks, and employee commutes to and from the Project site. In addition, fugitive dust would be generated from earth-moving activities. Emissions from construction-related activities are generally short-term in duration but may still cause adverse air quality impacts. The estimated criteria pollutant emissions associated with Project construction are presented in Table 5.

Table 5: Construction Criteria Pollutant Emissions Compared to SCAQMD Mass Thresholds

	Emissions (lbs/day)						
	VOC	NO _x	SO _x	CO	PM ₁₀	PM _{2.5}	Pb
Project Construction	4.70	54.40	0.15	45.45	12.24	3.94	-
SCAQMD Threshold of Significance	75	100	150	550	150	55	3
Exceed Threshold?	No	No	No	No	No	No	No

Source: Roadway Construction Emissions Model, Version 9.0.0, Appendix A.

In accordance with SCAQMD methodology, projects that do not exceed the established mass daily threshold values do not add significantly to a cumulative air quality impact. As shown in Table 5, Project construction emissions would fall below SCAQMD mass daily thresholds.

Because the Project's emissions do not exceed SCAQMD thresholds, the proposed Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard, and the potential impact would be less than significant.

- c. *Expose sensitive receptors to substantial pollutant concentrations?*

Less than Significant Impact. Sensitive receptors are defined as populations that are more susceptible to the effects of pollution than the population at large. Sensitive receptors are facilities that

Air Quality and Greenhouse Gas Emissions Study

house or attract children, the elderly, and people with illnesses or others who are especially sensitive to the effects of air pollutant. Land uses identified to be sensitive receptors include residences, schools, playgrounds, childcare centers, athletic facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. The nearest sensitive receptors are located approximately 200 feet (60 meters) northeast from the Project site boundary.

Projects that generate emissions that are below the applicable LSTs for the site receptor area are not expected to expose sensitive receptors to substantial concentrations of criteria pollutants. As shown in Table 6, the Project's construction emissions would be below the applicable LSTs.

Table 6: Construction Criteria Pollutant Emissions Compared to SCAQMD LSTs

	Emissions (lbs/day)			
	NO _x	CO	PM ₁₀	PM _{2.5}
Project Construction	54.40	45.45	12.24	3.94
SCAQMD LST	74	882	15	5
Exceed Threshold?	No	No	No	No

Source: Roadway Construction Emissions Model, Version 9.0.0, Appendix A.

Fugitive dust would be generated during Project construction and, specifically, earth-moving activities. Most of this fugitive dust would remain localized and would be deposited near the Project site. However, the potential for impacts from fugitive dust exists unless control measures are implemented to reduce the emissions from the Project site. However, SCAQMD Rule 403, Fugitive Dust, limits the discharge of PM emissions and establishes Best Available Control Measures that are applicable to all construction activities (SCAQMD 2005). Consistent with the SCAQMD Best Available Control Measures, the Project would be required to use water trucks to stabilize soils. In addition, as demonstrated in Table 6, PM₁₀ emissions from construction would not exceed the applicable LST.

Exposure to DPM from diesel vehicles and off-road construction equipment can result in health risks to nearby sensitive receptors. While the Project would involve the use of diesel fueled vehicles and off-road equipment, construction would be temporary. In addition, as demonstrated in Table 5 and Table 6, Project construction would result in emissions below the SCAQMD thresholds for criteria pollutant emissions, which includes particulate matter. According to CARB, DPM emissions have also been shown to be highly dispersive in the atmosphere with the DPM concentration decreasing with distance from the source (CARB 2005). Therefore, the concentration of DPM at the nearest receptors would be substantially reduced, and construction of the Project would not result in an increase in health risks due to exposure to DPM.

Based on the discussion above, the Project would not expose sensitive receptors to substantial pollutant concentrations, and the potential impact would be less than significant.

- d. *Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?*

Less than Significant Impact. The SCAQMD has identified land uses commonly subject to odor complaints. These land uses include agriculture (farming and livestock), wastewater treatment, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding

Air Quality and Greenhouse Gas Emissions Study

(SCAQMD 1993). The Project entails intersection improvement activities that would not involve any of the land uses identified to result in odor complaints nor involve any components with the potential to create objectionable odors affecting a substantial number of people.

Construction activities associated with the Project could result in short-term odorous emissions from diesel exhaust associated with diesel-fueled equipment. However, these emissions would be intermittent and would dissipate rapidly from the source. Furthermore, SCAQMD regulates objectionable odors through Rule 402, Nuisance (SCAQMD 1976). Thus, although not anticipated, if odor complaints are made during implementation of the Project, the SCAQMD would ensure that such odors are addressed, and any potential odor effects are minimized or eliminated.

The Project would not result in other emissions, such as those leading to odors, adversely affecting a substantial number of people, and the potential impact would be less than significant.

5.2 Greenhouse Gas Emissions

Would the project:	Potentially Significant Impact	Less than Significant with Mitigation Incorporated	Less than Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

5.2.1 Impact Analysis

- a. *Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*

Less than Significant Impact. The Project is a construction project and would not result in an operational phase that would generate emissions that differ from existing conditions. Therefore, no GHG emissions impact would occur related to Project operations, and the following discussion focuses on construction emissions of GHGs.

The Project would generate GHG emissions during construction from off-road equipment and on-road vehicle exhaust from worker vehicle trips and hauling truck trips. Table 7, below, presents a summary of the estimated GHG emissions that would result from Project construction. To be consistent with SCAQMD’s GHG emissions policy, the table also presents construction emissions amortized over a 30-year Project lifetime.

Table 7: Construction GHG Emissions

Project Emissions	MTCO ₂ e
Construction Emissions	1,232.35
Amortized Construction Emissions	41.08
SCAQMD Threshold of Significance	3,000
Exceed Threshold?	No

Source: Roadway Construction Emissions Model, Version 9.0.0, Appendix A.

The SCAQMD indicated that projects which result in GHG emissions below the applicable screening thresholds would result in a less than significant impact related to GHG emissions. As shown in Table 7, construction of the Project would emit an estimated total of 1,232.35 MTCO₂e, which is well below the 3,000 MTCO₂e significance threshold applied in this analysis. As a result, the Project would not generate GHG emissions, either directly or indirectly, that would be considered to have a substantial adverse effect on the environment, and the potential impact would be less than significant.

Air Quality and Greenhouse Gas Emissions Study

- b. *Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?*

Less than Significant Impact. In 2006, the State Legislature enacted AB 32, also known as the California Global Warming Solutions Act of 2006. AB 32 required CARB to adopt statewide GHG emissions limits to achieve statewide GHG emissions levels at the same levels they were atmospherically in 1990 by the year 2020. SB 32, signed in 2016, expands on the mandate of AB 32 by requiring CARB to ensure that state GHG emissions are reduced to 40 percent below the 1990 emission level by the year 2030. AB 1279 was enacted in 2022, and requires that the state achieve carbon neutrality as soon as possible, but no later than 2045. CARB approved the 2022 Scoping Plan in December 2022, which built upon the 2008 and 2017 Scoping Plans in order to meet California's SB 32 and AB 1279 GHG reduction targets.

For this analysis, the applicable plans adopted for the purpose of reducing GHG emissions are the CARB's 2022 Scoping Plan and the SCAG RTP/SCS. The City of Maywood is currently developing a Climate Action, Adaptation, and Resilience Plan (CAARP), which is intended to provide a roadmap to accelerate GHG emissions reductions and support the City and its residents in addressing the impacts of climate change (City of Maywood 2023). However, the CAARP has not yet been released nor adopted by the City Council.

The 2022 Scoping Plan includes an action item wherein construction equipment shall be 25 percent electrified by 2030 and 75 percent electrified by 2045. Project construction is expected to be complete prior to 2030 and, as a result, this action item is not applicable. The vast majority of the remaining action items and measures in the 2022 Scoping Plan apply to local governing agencies and land development projects and are not applicable to the Project, which would not constitute a new source of operational emissions. Specific goals within the SCAG RTP/SCS that are relevant to the Project include (1) improving mobility, accessibility, reliability, and travel safety for people and goods; (2) reducing GHG emissions and improving air quality; and (3) leveraging new transportation technologies and data-driven solutions that result in more efficient travel. Congestion management and signal coordination, both of which are components of the Project, are shown to reduce GHG emissions. Roadway improvements that reduce congestion, improve vehicle operating speeds, reduce idling and stop-and-go conditions, result in lower emission rates (CARB 2014; CARB 2019). Because the Project would involve implementation of congestion relief features, the Project would directly support the GHG reduction strategies established in the RTP/SCS as well as the carbon neutrality goal of the 2022 Scoping Plan.

Considering the above, the Project would not conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs. Therefore, potential impacts would be less than significant.

Total (tons/construction project)	0.44	4.47	4.93	1.20	0.21	0.99	0.38	0.17	0.21	0.01	1,328.80	0.24	0.08	1,358.42

Notes: Project Start Year -> 2024
 Project Length (months) -> 12
 Total Project Area (acres) -> 1
 Maximum Area Disturbed/Day (acres) -> 1
 Water Truck Used? -> Yes

Phase	Total Material Imported/Exported Volume (yd ³ /day)		Daily VMT (miles/day)			
	Soil	Asphalt	Soil Hauling	Asphalt Hauling	Worker Commute	Water Truck
Grubbing/Land Clearing	0	0	0	0	320	40
Grading/Excavation	850	0	1,290	0	920	40
Drainage/Utilities/Sub-Grade	0	0	0	0	680	40
Paving	0	750	0	1,140	520	40

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1, 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

Total Emission Estimates by Phase for -> <i>Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements</i>														
Project Phases (Tons for all except CO2e. Data Entry Worksheet

Note: Required data input sections have a yellow background. Optional data input sections have a blue background. Only areas with a yellow or blue background can be modified in the project. Other areas with a white background cannot be modified. Project details (D24, E28 through D26, and D28 through D41) for all project types. Please use "Clear Data Input & User Overrides" button first before changing the Project Type or begin a new project.

To begin a new project, click this button to start a new project. This button will only work if you created not to delete macros when loading this spreadsheet.

Input Type

Project Name	Salmon Avenue and Atlantic Boulevard Corporation Road Improvements
Construction Start Year	2024
Project Type	2
Project Construction Time	12/20
Worked Days per Month	2
Preparation Soils by Type: Entry 1, 2, or 3 (for project within Sacramento County; below soil types selection instructions in cells E18 to E20 otherwise see instructions provided in cells J18 to J22)	2
Project Length	1.40 miles
Project Area	1.40 acres
Maximum Area Disturbed/Dry	1.00
Major Trucks Used?	1

Enter a Year between 2014 and 2040 (inclusive)

1) New Road Construction: Project to build a roadway from base ground, which generally requires more site preparation than widening an existing roadway

2) Road Widening: Project to add a new lane to an existing roadway

3) Bridge/Overpass Construction: Project to build an elevated roadway, which generally requires some different equipment than a new roadway, such as a crane

4) Other Linear Project Type: Non-roadway project such as a pipeline, transmission line, or levee construction

months

days (assume 22 if unknown)

1) Sand Gravel: Use for quarrying/depot(s) (Deliveries/Conc)

2) Weathered Rock/Earth: Use for log/extraction (Jackson Highway area) or the base formation (Scott Road, Rancho Marada)

3) Blast/ed Rock: Use for Sand Springs State or Cooper Hill Volcanics (Folsom South of Highway 50, Rancho Marada)

4) Other: Other Linear Project Type

miles

acres

1: Yes

2: No

Please note that the soil type instructions provided in cells E18 to E20 are specific to Sacramento County. Maps available from the Sacramento County website (<http://www.sacramento.gov/business/CDCA/soilClass-Peanning/Mitigation>) can be used to determine soil type outside Sacramento County.

<http://www.sacramento.gov/business/CDCA/soilClass-Peanning/Mitigation>

Material Hauling Quantity Input

Material Type	Phase	Haul Truck Capacity (yd ³) (assume 20 if unknown)	Import Volume (yd ³ /day)	Export Volume (yd ³ /day)
Soil	Gravel/Loam/Clay	20.00		850.00
	Gravel/Utilites/Slab/Grade	20.00		
	Gravel	20.00		
	Gravel/Land/Clay	20.00		
Asphalt	Gravel/Utilites/Slab/Grade	20.00		
	Gravel	20.00		

Mitigation Options

On-road Fuel Emissions Mitigation	On-road Equipment Emissions Mitigation

Select "2010 and Newer On-road Vehicles Fleet" option when the on-road heavy-duty truck fleet for the project will be limited to vehicles of model year 2010 or newer

Select "20% NOx and 45% Exhaust PM reduction" option if the project will be required to use a lower emitting off-road construction fleet. The SMOAQ Construction Mitigation Calculator can be used to confirm compliance with this mitigation measure. (<http://www.airquality.org/business/CDCA/soilClass-Peanning/Mitigation>)

Select "Use of Equipment" option if some or all off-road equipment used for the project meets CAFE 100 for "Standard"

The remaining sections of this sheet contain areas that can be modified by the user, although these modifications are optional.

Note: The program's estimates of construction period phase length can be overridden in cells D50 through D53, and F50 through F53.

Construction Periods	User Override of	Program	User Override of	Program
	Construction Months	Calculated Months	Phase Starting Date	Default Phase Starting Date
Grubbing/Land Clearing	0.00	1.20		1/1/2024
Grading/Excavation		5.40		1/1/2024
Drainage/Utilities/Sub-Grade		3.60		8/14/2024
Paving	3.00	1.80		10/2/2024
Totals (Months)		12		

Note: Soil Hauling emission default values can be overridden in cells D61 through D64, and F61 through F64.

801 S. Figueroa, Suite 300
Los Angeles, CA 90017

From: Hannah Hart, Project Biologist
Stantec
300 North Lake Avenue Suite 400
Pasadena, CA 91101

Project/File: 2042639600

Date: September 5, 2023

Reference: City of Maywood - Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project

1 Introduction

To support the preparation of the Initial Study Mitigated Negative Declaration for the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project (Project) a baseline biological survey of the Project and adjacent areas was conducted on August 22, 2023. This memorandum summarizes the results of the survey and desktop review conducted in support of the proposed Project.

2 Existing Site Conditions

The Project site is located in the City of Maywood, Los Angeles County, California and includes nine intersections located within the project site along Slauson Avenue from about Maywood Avenue (western limits) and Atlantic Boulevard (eastern limits). The Project site is approximately 15 miles east of the Pacific Ocean and approximately five miles southeast of downtown Los Angeles. The Project site is within a densely developed urban area surrounded by residential and retail/commercial properties (see Attachment A, Figures 1).

The Biological Study Area (BSA) includes the Project site and a 300-foot buffer.

3 Vegetation Communities/Land Cover Types

No natural vegetation communities occurred within the BSA. Most of the plant species present are either nonnative or a landscaped ornamental species. There are sporadic ruderal native species present but were not found in high enough densities/abundance to designate a specific vegetation community (see Appendix A, Figure 2).

Reference: City of Maywood

3.1 Land Cover Types

3.1.1 DISTURBED/DEVELOPED

The BSA is characterized as disturbed/developed land cover type and does not include any natural communities. Plant observations during the August 2023 survey were primarily comprised of ornamental plant species located within medians in the roadway, along the sidewalks, residential yards, retail/commercial developments, and schools. The most dense stand of ornamental trees was in the shopping centers near the intersection of Slauson Avenue and Atlantic Boulevard; see Attachment B for photos of BSA.

4 Jurisdictional Waters and Wetlands

Based on database searches of the United States Fish and Wildlife Service (USFWS) National Wetlands Inventory and United States Geological Survey (USGS) National Hydrography Dataset (NHD), there are multiple NHD underground pipelines within the BSA, but no mapped above ground aquatic resources were found. There are storm drains along Slauson Avenue and the intersecting streets, some of which indicate that they drain to the Pacific Ocean. No wetlands or other potentially jurisdictional aquatic resources were found or are anticipated to occur within the BSA.

5 Common Wildlife

Common wildlife directly observed onsite during the August 2023 survey included western gull (*Larus occidentalis*), mourning dove (*Zenaida macroura*), American crow (*Corvus brachyrhynchos*), and California ground squirrel (*Otospermophilus beecheyi*); no other wildlife species were observed during the August 2023 survey event. Common species known to occur in the general area, but not observed, include (but are not limited to) house finch (*Haemorhous mexicanus*), house sparrow (*Passer domesticus*), northern mockingbird (*Mimus polyglottos*), black phoebe (*Sayornis nigricans*), western fence lizard (*Sceloporus occidentalis*), and western honeybee (*Apis mellifera*).

6 Special-Status Plants

The table in Attachment C presents a list of special-status plants, including federally and state listed species and California Rare Plant Rank (CRPR) 1-4 species that are known to occur within 10 miles of the BSA (Attachment A, Figures 3 and 4 provide a depiction of known species locations).

Record searches of the California Natural Diversity Database (CNDDDB) was performed for special-status plant taxa. Each of the taxa identified in the record searches was assessed for their potential to occur within the BSA based on the following criteria:

Reference: City of Maywood

- **Present:** Taxa were observed within the BSA during recent botanical surveys or population has been acknowledged by CDFW, USFWS, or local experts.
- **High:** Both a documented recent record (within 10 years) exists of the taxa within the BSA, or immediate vicinity (approximately 5 miles) and the environmental conditions (including soil type) associated with taxa presence occur within the BSA.
- **Moderate:** Both a documented recent record (within 10 years) exists of the taxa within the BSA, or the immediate vicinity (approximately 5 miles) and the environmental conditions associated with taxa presence are marginal or limited within the BSA, or the BSA is located within the known current distribution of the taxa and the environmental conditions (including soil type) associated with taxa presence occur within the BSA.
- **Low:** A historical record (over 10 years) exists of the taxa within the BSA or general vicinity (approximately 10 miles), and the environmental conditions (including soil type) associated with taxa presence are marginal or limited within the BSA.
- **Not Likely to Occur:** The environmental conditions associated with taxa presence do not occur within the BSA.

Based on the results of the literature and database (see Attachment B), a total of 30 special-status plant species were found to historically occur within 10 miles of the Project area. These species were evaluated for their potential to occur in the proposed Project area based on considerations of local records, habitat conditions, and environmental requirements. After this evaluation, no special-status plant species were considered to have potential to occur at or near the proposed Project site. No special-status plant species were observed during the August 2023 survey.

7 Special-Status Wildlife

Special-status taxa include those listed as threatened or endangered under the Federal Endangered Species Act (FESA) or California Endangered Species Act (CESA), taxa proposed for such listing, Species of Special Concern, and other taxa that have been identified by USFWS, California Department of Fish and Wildlife (CDFW), or local jurisdictions as unique or rare and that have the potential to occur within the BSA.

The CNDDDB was queried for occurrences of special-status wildlife taxa within 10 miles of the BSA. The table in Attachment C summarizes the special-status wildlife taxa known to occur regionally and their potential for occurrence in the BSA (Attachment A, Figures 3 and 4 provide a depiction of previously reported species locations). Each of the taxa identified in the database reviews/searches were assessed for its potential to occur within the BSA based on the following criteria:

- **Present:** Taxa (or sign) were observed in the BSA or in the same watershed (aquatic taxa only) during the most recent surveys, or a population has been acknowledged by CDFW, USFWS, or local experts.

Reference: City of Maywood

- **High:** Habitat (including soils) for the taxa occurs onsite, and a known occurrence occurs within the BSA or adjacent areas (within 5 miles of the BSA) within the past 20 years; however, these taxa were not detected during the most recent surveys.
- **Moderate:** Habitat (including soils) for the taxa occurs onsite, and a known regional record occurs within the database search, but not within 5 miles of the BSA or within the past 20 years; or a known occurrence occurs within 5 miles of the BSA and within the past 20 years and marginal or limited amounts of habitat occurs onsite; or the taxa's range includes the geographic area and suitable habitat exists.
- **Low:** Limited habitat for the taxa occurs within the BSA and no known occurrences were found within the database search and the taxa's range includes the geographic area.
- **Not Likely to Occur:** The environmental conditions associated with taxa presence do not occur within the BSA.

Based on the results of the literature and database review (see Attachment C), a total of 32 special-status wildlife species were found to historically occur within 10 miles of the BSA. These species were evaluated for their potential to occur in the proposed Project area based on considerations of local records, habitat conditions, and environmental requirements. After this review, there are no special-status wildlife species considered to have potential to occur at or near the BSA. No special-status wildlife species or their sign were observed during the August 2023 survey.

8 Sensitive Natural Communities

Sensitive natural communities are defined by CDFW (2018) as “communities that are of limited distribution statewide or within a county or region and are often vulnerable to environmental effects of projects.” All vegetation within the state is ranked with an “S” rank; however, only those that are of special concern (S1-S3 rank) are evaluated under California Environmental Quality Act (CEQA). None of the vegetation communities identified within the BSA are listed as sensitive.

9 Designated Critical Habitat

Federally Designated Critical Habitat (DCH) is a term defined and used in FESA as specific geographic areas that contain features essential to the conservation of an endangered or threatened species and that may require special management and protection. Critical habitat may also include areas that are not currently occupied by the species but will be needed for its recovery.

There is no DCH mapped within or adjacent to the BSA.

Attachment C Special Status-Species Tables

Table 1: Known and Potential Occurrences of Special-Status Plant Species within the Biological Study Area

Species	Status	Habitat and Distribution	Blooming Period	Potential to Occur
<i>Arenaria paludicola</i> marsh sandwort	FE, SE, S1, 1B.1	Marshes and swamps (both brackish and freshwater) in openings and sandy areas; 3-170 meters (m).	Mar-Aug	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 6.5 miles west of the BSA from 1900.
<i>Astragalus tener</i> <i>var. titi</i> coastal dunes milk-vetch	FE, SE, S1, 1B.1	Coastal bluff scrub (sandy), coastal dunes, and coastal prairies (mesic); often found in mesic areas; 1-50 m.	Mar-May	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 6.5 miles west of the BSA from 1903.
<i>Atriplex coulteri</i> Coulter's saltbush	1B.2, S1S2	Coastal bluff scrub, coastal dunes, coastal scrub, valley and foothill grassland, ocean bluffs, ridgetops, as well as alkaline low places; alkaline, dry, or clay soils; 2-460 m.	Mar-Oct	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 8 miles southwest of the BSA from 1902.
<i>Atriplex parishii</i> Parish's brittle scale	1B.1, S1	Native to central and southern California often found in dry lake beds, playas, and ephemeral vernal pools; chenopod scrub; saline and alkaline soils; 0-470 m.	Jun-Oct	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 9 miles south of the BSA.
<i>Atriplex serenana</i> <i>var. davidsonii</i> Davidson's salt scale	1B.2, S1	Coastal scrub, bluffs, chenopod scrub, playas, and vernal pools from southern California to Baja California, Mexico; alkaline soils; 10-200 m.	Apr-Oct	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 4.5 miles north of the BSA from 1902.
<i>Berberis nevini</i> Nevin's barberry	FE, SE, S1, 1B.1	Chaparral, cismontane woodland, coastal scrub, riparian scrub in gravelly or sandy areas; 70-825 m.	(Feb) Mar-Jun	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 10 miles north of the BSA from 1961.

Species	Status	Habitat and Distribution	Blooming Period	Potential to Occur
<i>Calochortus plummerae</i> Plummer's mariposa-lily	S4, 4.2	Chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, and valley and foothill grasslands; granitic and rocky substrates; 100-1700m.	May-Jul	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 8.5 miles east of the BSA from 2005.
<i>Calochortus weedii</i> <i>var. intermedius</i> intermediate mariposa-lily	1B.2, S3	Perennial bulbiferous herb generally found within chaparral, coastal scrub and alley and foothill grassland with rocky and calcareous substrates; < 680 m.	May-Jul	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 8.5 miles east of the BSA from 2010.
<i>Calystegia felix</i> lucky-morning glory	S1, 1B.1	Historically associated with wetland and marshy places, but possibly in drier situations as well; possibly silty loam and alkaline; meadows and seeps (sometimes alkaline), riparian scrub (alluvial); 30-215 m.	Mar-Sep	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 4 miles east of the BSA from 1902.
<i>Centromadia parryi</i> <i>ssp. australis</i> southern tarplant	1B.1, S2	Marshes and swamps (margins), valley and foothill grasslands (vernally mesic), and vernal pools; often in disturbed sites near the coast at marsh edges; also, in alkaline soils sometimes with saltgrass; 0-480 m.	May-Nov	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest recorded occurrence is approximately 2 miles east of the BSA from 1931 and the most recently recorded occurrence is approximately 7.5 miles east of the BSA from 2015.
<i>Cuscuta obtusiflora</i> <i>var. glandulosa</i> Peruvian dodder	SH, 2B.2	Freshwater marshes and swamps; 15-280 m.	Jul-Oct	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 9 miles northeast of the BSA.
<i>Dodecahema leptoceras</i> slender-horned spineflower	FE, SE, S1, 1B.1	Sandy places in chaparral, cismontane woodland, and coastal scrub on alluvial fans, 200 to 760 m.	Apr-Jun	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 7.5 miles north of the BSA.

Species	Status	Habitat and Distribution	Blooming Period	Potential to Occur
<i>Dudleya multicaulis</i> many-stemmed dudleya	1B.2, S2	Chaparral, Coastal scrub, Valley and foothill grassland; often clay/perennial herb; < 600 m.	May-June	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest recorded occurrence is approximately 7.5 miles east of the BSA and the most recently recorded occurrence is approximately 9.5 miles northwest of the BSA from 1925.
<i>Eryngium aristulatum</i> var. <i>parishii</i> San Diego button-celery	FE, SE, S1, 1B.1	Coastal scrub, vernal pools, and valley and foothill grasslands; usually found in mesic areas; 20-620 m.	Apr-Jun	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 10 miles west of the BSA from 1901.
<i>Helianthus nuttallii</i> ssp. <i>parishii</i> Los Angeles sunflower	1A, SX	Historically in Los Angeles, Orange, Riverside, and San Bernardino counties; marshes and swamps (coastal salt and freshwater); still presumed to be extinct; 10-1525 m.	Aug-Oct	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 1.5 miles north of the BSA from 1901.
<i>Horkelia cuneata</i> var. <i>puberula</i> mesa horkelia	1B.1, S1	Perennial herb; sandy or gravelly soils in chaparral, woodlands, and coastal scrub. San Luis Obispo County south to San Diego County, from about 230 to 2,700 ft. elev.	Feb–Sept	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 7.5 miles north of the BSA from 1911.
<i>Lasthenia glabrata</i> ssp. <i>coulteri</i> Coulter's goldfields	1B.1, S2	Marshes and swamps (coastal salt), playas, coastal dunes, coastal sage scrub, valley and foothill grassland, and vernal pools; usually found on clay and alkaline soils in playas, sinks, and grasslands; 1-1,375 m.	Feb-Jun	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest recorded occurrence is approximately 6.5 miles west of the BSA from 1901 and the most recently recorded occurrence is approximately 8.5 miles south of the BSA from 1973.
<i>Lepidium virginicum</i> var. <i>robinsonii</i> Robinson's pepper-grass	S3, 4.3	Chaparral, coastal scrub, and shrubland; dry soils; 1-885 m.	Jan-Jul	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 4 miles north of the BSA from 1950.

Species	Status	Habitat and Distribution	Blooming Period	Potential to Occur
<i>Nasturtium gambelii</i> Gambel's water cress	FE, SE, S1, 1B.1	Marshes and swamps (freshwater or brackish); 5-330 m.	Apr-Oct	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 6.5 miles west of the BSA from 1904.
<i>Navarretia fossalis</i> spreading navarretia	FT, S2, 1B.1	Chenopod scrub, marshes, and swamps (assorted shallow freshwater), playas, and vernal pools; 30 to 655 m.	Apr-Jun	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 7.5 miles west of the BSA from 1906.
<i>Navarretia prostrata</i> prostrate vernal pool navarretia	1B.2, S2	Coastal scrub, valley and foothill grassland, vernal pools, meadows and seeps; alkaline soils in grassland, or in vernal pools; mesic, alkaline sites; 3-1235 m.;	Apr-Jun	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest recorded occurrence is approximately 3 miles southeast of the BSA from 1895 and the most recently recorded occurrence is approximately 7.5 miles southwest of the BSA from 1963.
<i>Orcuttia californica</i> California Orcutt grass	FE, SE, S1, 1B.1	Occurs only in large and deep vernal pools; clay soils with an impervious subsurface layer and longer inundation periods; 15-660 m.	Apr-Aug	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest recorded occurrence is approximately 3 miles southeast of the BSA and the most recently recorded occurrence is approximately 8 miles southwest of the BSA from 1976.
<i>Phacelia stellaris</i> Brand's star phacelia	S1, 1B.1	Coastal dunes, coastal scrub, coastal bluff scrub; on bluffs and slopes near the ocean in sandy or clay soils; 1-400 m.	Mar-Jun	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 5.5 miles south of the BSA from 1923.
<i>Pseudognaphalium leucocephalum</i> white rabbit-tobacco	2B.2, S2	Chaparral, cismontane woodland, coastal scrub, riparian woodland, dry stream bottoms, and canyon bottoms; sandy and gravelly substrates; 0-2100 m.	(Jul) Aug-Nov (Dec)	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 9.5 miles northwest of the BSA from 1907.

Species	Status	Habitat and Distribution	Blooming Period	Potential to Occur
<i>Quercus dumosa</i> Nuttall's scrub oak	1B.1, S3	Closed-cone coniferous forest, chaparral, and coastal sage scrub. Occurring on sandy, clay loam soils; < 200 m..	Mar-May	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 9.5 miles north of the BSA from 1924.
<i>Ribes divaricatum</i> <i>var. parishii</i> Parish's gooseberry	SX, 1A	Riparian woodlands; 65-300 m.	Feb-Apr	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest recorded occurrence is approximately 6.5 miles north of the BSA from 1893 and the most recently recorded occurrence is approximately 7.5 miles east of the BSA from 199X.
<i>Scutellaria bolanderi</i> <i>ssp. austromontana</i> southern mountains skullcap	S3, 1B.2	Chaparral, cismontane woodland, and lower montane coniferous forest; 425 to 2,000 m.	Jun-Aug	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 9 miles northeast of the BSA.
<i>Sidalcea neomexicana</i> salt spring checkerbloom	2B.2, S2	Playas, chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub; alkali springs and marshes; 15-1530 m.	Mar-Jun	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest recorded occurrence is approximately 4 miles north of the BSA from 1902 and the most recently recorded occurrence is approximately 9 miles west of the BSA from 1922.
<i>Symphyotrichum defoliatum</i> San Bernardino aster	1B.2, S2	Meadows and seeps, cismontane woodland, coastal scrub, lower montane coniferous forest, marshes and swamps, valley and foothill grassland; vernal mesic grassland or near ditches, streams and springs; disturbed areas; 3-2045 m.	July-Nov	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest recorded occurrence is approximately 6.5 miles west of the BSA from 1904 and the most recently recorded occurrence is approximately 9.5 miles south of the BSA from 1930.
<i>Symphyotrichum greatae</i> Greata's aster	S2, 1B.3	Broadleaved upland forest, chaparral, cismontane woodland, lower montane coniferous forest, riparian woodland; mesic microhabitats; 300-2010 m.	Jun-Oct	Not Likely to Occur: Suitable habitat and substrate is not present within the BSA. The nearest and most recently recorded occurrence is approximately 5.5 miles north of the BSA from 1932.

Species	Status	Habitat and Distribution	Blooming Period	Potential to Occur
---------	--------	--------------------------	-----------------	--------------------

Status Codes

Federal Designation

FE = Federally Endangered

FT = Federally Threatened

FC = Federal Candidate Species for Listing

CDFW State Designation

SE = State Endangered

SR = State Rare

ST = State Threatened

SX: Presumed Extirpated

State Ranking

S1 = Critically Imperiled

S2 = Imperiled

S3 = Vulnerable

S4 = Apparently Secure

S5 - Secure

CNPS CRPR Designation

1A = Plants considered by the CNPS to be extinct in California

1B = Plants rare, threatened, or endangered in California and elsewhere.

2A. Presumed extinct in California, extant and more common elsewhere

2B. Rare or Endangered in California, more common elsewhere

3. Plants for which we need more information - Review list

4. Plants of limited distribution - Watch list

.1 = Seriously threatened in California (high degree/immediacy of threat).

.2 = Fairly threatened in California (moderate degree/immediacy of threat).

.3 = Not very threatened in California (low degree or immediacy of threats or no current threats known)

BSA = Biological Study Area

m = meter

Table 2: Known and Potential Occurrences of Special-Status Wildlife Species within the Biological Study Area

Taxa		Status	Habitat Type	Comments	Occurrence Potential
Scientific Name	Common Name				
INVERTEBRATES					
<i>Bombus crotchii</i>	Crotch bumble bee	SC, S1S2	Coastal California east to the sierra-cascade crest and south into Mexico. Food plant genera include <i>Antirrhinum</i> , <i>Phacelia</i> , <i>Clarkia</i> , <i>Dendromecon</i> , <i>Eschscholzia</i> , and <i>Eriogonum</i> .	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 4.5 miles west of the BSA from 1940 and the most recently recorded occurrence is approximately 9 miles north of the BSA from 2020.	Not Likely to Occur
<i>Brennania belkini</i>	Belkin's dune tabanid fly	S1S2	Native to dune habitats of Los Angeles and Mexico.	Suitable habitat is not present within the BSA. The nearest and most recently recorded occurrence is approximately 7.5 miles west of the BSA from 1958.	Not Likely to Occur
<i>Glaucopsyche lygdamus palosverdesensis</i>	Palos Verdes blue butterfly	FE, S1	Dependent on two known larval host plants, Santa Barbara milkvetch (<i>Astragalus trichopodus</i> var. <i>lonchus</i>)—also known as locoweed—and common deerweed (<i>Acmispon glaber</i>) within coastal scrub habitat. Known only from Palos Verdes peninsula.	Suitable habitat is not present within the BSA. The nearest and most recently recorded occurrence is approximately 8 miles south of the BSA from 2001.	Not Likely to Occur
<i>Habroscelimorpha gabbii</i>	western tidal-flat tiger beetle	SA, S1	Salty coastal habitats including salt marshes, tidal flats, and beaches.	Suitable habitat is not present within the BSA. The nearest and most recently recorded occurrence is approximately 8 miles south of the BSA from 1998.	Not Likely to Occur
MOLLUSK					

Taxa		Status	Habitat Type	Comments	Occurrence Potential
Scientific Name	Common Name				
<i>Glyptostoma gabrielse</i>	San Gabriel chestnut	S3	Found only in the San Gabriel Mountains and foothills within Pasadena, Millard Canyon, Mt. Lowe, and the Dominguez Hills. limited to microhabitats with sufficient moisture and are largely sedentary, usually moving only to find food or reproduce. Typically, on rocky hills and mountains at relatively low elevations under dead cacti, logs, and vegetable debris and on rocks with lichen and moss. Aestivate underground during dry seasons.	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 5 miles north of the BSA from 1944 and the most recently recorded occurrence is approximately 8 miles south of the BSA from 1953.	Not Likely to Occur
<i>Gonidea angulata</i>	western ridged mussel	S2	Found in rivers and streams in California, Oregon, Washington, Idaho, Nevada, and British Columbia.	Suitable habitat is not present within the BSA. The nearest and most recently recorded occurrence is approximately 0.31-mile northeast of the BSA from 1993.	Not Likely to Occur
AMPHIBIANS					
<i>Spea hammondi</i>	western spadefoot	SSC, S3	Occurs in the Central Valley and adjacent foothills and the non-desert areas of Southern California and Baja California, Mexico. Grassland habitats, valley-foothill hardwood woodlands, and coastal sage scrub. Vernal pools and other temporary rain pools, cattle tanks, and occasionally pools of intermittent streams are essential for breeding and egg-laying. Burrows in loose soils during dry season.	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 3.5 miles east of the BSA from 1963 and the most recently recorded occurrence is approximately 10 miles east of the BSA from 2010.	Not Likely to Occur

Taxa		Status	Habitat Type	Comments	Occurrence Potential
Scientific Name	Common Name				
REPTILES					
<i>Anniella stebbinsi</i>	southern California legless lizard	SSC, S3	Generally, south of the transverse range, extending to northwestern Baja California, Mexico. Occurs in sandy or loose loamy soils under sparse vegetation. Disjunct populations occur in the Tehachapi and Piute mountains in Kern County. Occurs in a variety of habitats; generally, in moist, loose soils as they prefer soils with a high moisture content.	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 1.5 miles south of the BSA from 1939 and the most recently recorded occurrence is approximately 8 miles north of the BSA from 2021.	Not Likely to Occur
<i>Arizona elegans occidentalis</i>	California glossy snake	SSC, S2	Generally found in arid scrub, rocky washes, grasslands, and chaparral.	Suitable habitat is not present within the BSA. The nearest recorded and most recently recorded occurrence is approximately 7 miles south of the BSA from 1889.	Not Likely to Occur
<i>Aspidoscelis tigris stejnegeri</i>	coastal whiptail	SSC, S3	Found in deserts and semi-arid areas with sparse vegetation and open areas. Also found in woodland and riparian areas. Ground may be firm soil, sandy, or rocky.	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 8 miles east of the BSA from 2000 and the most recently recorded occurrence is approximately 10 miles east of the BSA from 2017.	Not Likely to Occur
<i>Emys marmorata</i>	western pond turtle	SSC, S3	A thoroughly aquatic turtle of small ponds and lakes, marshes, permanent and ephemeral shallow wetlands, stock ponds, reservoirs, treatment lagoons, irrigation ditches, and slow-moving permanent or intermittent rivers, streams, usually with aquatic vegetation, below 6000 feet elevation. Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 kilometer from water for egg-laying. Abundant cover necessary including logs, rocks, and submerged vegetation.	Suitable habitat is not present within the BSA. The nearest recorded and most recently recorded occurrence is approximately 5 miles northeast of the BSA from 1987.	Not Likely to Occur

Taxa		Status	Habitat Type	Comments	Occurrence Potential
Scientific Name	Common Name				
<i>Phrynosoma blainvillii</i>	coast horned lizard	SSC, S4	Primarily in sandy soil in open areas, especially sandy washes and floodplains, in many plant communities. Requires open areas for sunning, bushes for cover, patches of loose soil for burial, and an abundant supply of ants or other insects. Main prey item is harvester ants. Occurs west of the deserts from northern Baja California, Mexico north to Shasta County below 2,400 m (8,000 feet) elevation.	Suitable habitat is not present within the BSA. The nearest recorded and most recently recorded occurrence is approximately 4 miles north of the BSA from 1974.	Not Likely to Occur
BIRDS					
<i>Agelaius tricolor</i>	tricolored blackbird	ST, SSC, S2, BCC	Highly colonial species, most numerous in the Central Valley and vicinity, and largely endemic to California. Breeds near fresh water, preferably in emergent wetland with tall, dense cattails or tules, but also in thickets of willow, blackberry, wild rose, and tall herbs. Forages in grassland and cropland habitats with insect prey within a few kilometers of the colony. They are itinerant breeders, nesting more than once at different locations during the breeding season.	Suitable habitat is not present within the BSA. The nearest and most recently recorded occurrence is approximately 8 miles southwest of the BSA from 1940.	Not Likely to Occur (nesting and foraging)

Taxa		Status	Habitat Type	Comments	Occurrence Potential
Scientific Name	Common Name				
<i>Athene cunicularia</i>	burrowing owl	SSC, S2, BCC	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Owls are found in microhabitats highly altered by humans, including flood risk management and irrigation basins, dikes, banks, abandoned fields surrounded by agriculture, and road cuts and margins. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel (<i>Otospermophilus beecheyi</i>).	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 0.1 mile north of the BSA from 1921 and the most recently recorded occurrence is approximately 8 miles east of the BSA from 2010.	Not Likely to Occur (nesting and foraging)
<i>Buteo swainsoni</i>	Swainson's hawk	ST, S4	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	Suitable habitat is not present within the BSA. The nearest and most recently recorded occurrence is approximately 7.5 miles north of the BSA from 1880.	Not Likely to Occur (nesting and foraging)
<i>Coccyzus americanus occidentalis</i>	western yellow-billed cuckoo	FT, SE, S1	Riparian forest nester, along the broad, lower flood-bottoms of larger river systems. Nests in riparian forests of willow, often mixed with cottonwoods, with well-developed understories of blackberry, nettles, or wild grape.	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 5 miles south of the BSA from 1910 and the most recently recorded occurrence is approximately 6.5 miles east of the BSA from 2011.	Not Likely to Occur (nesting and foraging)
<i>Coturnicops noveboracensis</i>	yellow rail	BCC, SSC, S1S2	Summer resident in eastern Sierra Nevada in Mono County. Freshwater marshlands.	Suitable habitat is not present within the BSA. The nearest and most recently recorded occurrence is approximately 8 miles northwest of the BSA from 1952.	Not Likely to Occur (nesting and foraging)

Taxa		Status	Habitat Type	Comments	Occurrence Potential
Scientific Name	Common Name				
<i>Empidonax traillii extimus</i>	southwestern willow flycatcher	FE, SE, S3	Rare and local breeder in extensive riparian areas of dense willows or (rarely) tamarisk, usually with standing water, in the southwestern U.S.	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 0.1 mile north of the BSA from 1894 and the most recently recorded occurrence is approximately 6.5 miles north of the BSA from 1906.	Not Likely to Occur (nesting and foraging)
<i>Falco peregrinus anatum</i>	American peregrine falcon	Delisted, S3S4	Nesting habitats contain cliffs and almost always nest near water. Open habitats are often used for foraging. Non-breeding American peregrine falcons may also occur in open areas without cliffs. Many artificial habitats like towers, bridges and buildings are also utilized.	Limited suitable foraging habitat occurs within the BSA. The nearest recorded occurrence is approximately 9.5 miles north of the BSA in 2005.	Low (foraging)/Not Likely to Occur (nesting)
<i>Icteria virens</i>	yellow-breasted chat	SSC, S3	Inhabits riparian thickets of willow and other brushy tangles near water courses; nests in low, dense riparian vegetation; nests and forages within 10 feet of ground.	Suitable habitat is not present within the BSA. The nearest and most recently recorded occurrence is approximately 8 miles east of the BSA from 2017.	Not Likely to Occur (nesting and foraging)
<i>Poliptila californica californica</i>	coastal California gnatcatcher	FT, SSC, S2	Obligate, permanent resident of coastal sage scrub below 2500 feet in southern California. Low, coastal sage scrub in arid washes and on mesas and slopes with California sagebrush (<i>Artemisia californica</i>) as a dominant or co-dominant species. Not all areas classified as coastal sage scrub are occupied.	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 5 miles northeast of the BSA from 2017 and the most recently recorded occurrence is approximately 8 miles east of the BSA from 2018.	Not Likely to Occur (nesting and foraging)
<i>Riparia riparia</i>	bank swallow	ST, S2	Colonial nester; nests primarily in riparian and other lowland habitats west of the desert. Requires vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, ocean to dig nesting hole. Forage in open areas and avoid places with tree cover	Suitable habitat is not present within the BSA. The nearest and most recently recorded occurrence is approximately 1 mile north of the BSA from 1894.	Not Likely to Occur (nesting and foraging)

Taxa		Status	Habitat Type	Comments	Occurrence Potential
Scientific Name	Common Name				
<i>Vireo bellii pusillus</i>	least Bell's vireo	FE, SE, S2	Spring and summer resident of southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 feet. Often inhabits structurally diverse woodlands along watercourses including cottonwood-willow and oak woodlands and mulefat scrub. Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, mulefat, or mesquite.	Suitable habitat is not present within the BSA. The nearest recorded occurrence is approximately 1.5 miles west of the BSA from 1895 and the most recently recorded occurrence is approximately 6.5 miles east of the BSA from 2011.	Not Likely to Occur (nesting and foraging)
MAMMALS					
<i>Antrozous pallidus</i>	pallid bat	SSC, S3	Inhabits desert, grasslands, shrublands, woodlands and forests. Most common in open, dry habitats with rocky areas for roosting. Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	Suitable is not present within the BSA. The nearest and most recently recorded occurrence is approximately 5 miles west of the BSA from 1971.	Not Likely to Occur
<i>Eumops perotis californicus</i>	western mastiff bat	SSC, S3S4	Many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral. Roosts in crevices in cliff faces, high buildings, bridges, trees, and tunnels. In California, most records are from rocky areas at low elevations.	Suitable is not present within the BSA. The nearest recorded occurrence is approximately 4 miles north of the BSA from 1990 and the most recently recorded occurrence is approximately 9.5 miles northwest of the BSA from 1991.	Not Likely to Occur
<i>Lasionycteris noctivagans</i>	silver-haired bat	S3S4	Coastal and montane forest and conifer and mixed conifer/hardwood forests. Forages over streams, ponds, and brushy areas, and requires follows of trees for roost habitat. Roosts mainly in hollows or crevices of trees, but may also roost in rock crevices, mines, caves, or bird nests.	Suitable is not present within the BSA. The nearest and most recently recorded occurrence is approximately 9.5 miles south of the BSA from 1978.	Not Likely to Occur

Taxa		Status	Habitat Type	Comments	Occurrence Potential
Scientific Name	Common Name				
<i>Lasiurus cinereus</i>	hoary bat	SA, S4	Forages over a wide range of habitats but prefers open habitats with access to water and trees for roosting. Typically, solitary, roosting in the foliage of shrubs or coniferous and deciduous trees. Roosts are usually near the edge of a clearing.	Suitable is not present within the BSA. The nearest recorded occurrence is approximately 4 miles north of the BSA from 1942 and the most recently recorded occurrence is approximately 9 miles north of the BSA from 1992.	Not Likely to Occur
<i>Lasiurus xanthinus</i>	western yellow bat	SSC, S3	Primarily roost in trees hanging from the underside of leaves. Commonly found in riparian woodland habitat with dead fronds of non-native palms (for roosting).	Suitable is not present within the BSA. The nearest and most recently recorded occurrence is approximately 10 miles north of the BSA from 1984.	Not Likely to Occur
<i>Microtus californicus stephensi</i>	south coast marsh vole	SSC, S2	Occurs in areas of tidal marshes in Los Angeles, Orange, and southern Ventura counties.	Suitable is not present within the BSA. The nearest and most recently recorded occurrence is approximately 9 miles north of the BSA from 1977.	Not Likely to Occur
<i>Nyctinomops femorosaccus</i>	pocketed free-tailed bat	SSC, S3	Occurs in a variety of arid areas in southern California; pinyon-juniper woodlands, desert scrub, palm oasis, desert wash, desert riparian, etc. rocky areas with high cliffs.	Suitable is not present within the BSA. The nearest and most recently recorded occurrence is approximately 7.5 miles west of the BSA from 1994.	Not Likely to Occur
<i>Nyctinomops macrotis</i>	big free-tailed bat	SSC, S3	Occurs in low-lying arid areas in southern California. Prefers rugged, rocky terrain. Often forages over water sources. Roosts in buildings, caves, and occasionally in holes in trees. Also roosts in crevices in high cliffs or rock outcrops.	Suitable is not present within the BSA. The nearest and most recently recorded occurrence is approximately 4 miles north of the BSA from 1985.	Not Likely to Occur
<i>Taxidea taxus</i>	American badger	SSC, S3	Inhabits areas herbaceous, shrub, and open stages of most habitats with dry, friable soils.	Suitable is not present within the BSA. The nearest and most recently recorded occurrence is approximately 0.01 mile north of the BSA from an unlisted date.	Not Likely to Occur

Executive Summary

Stantec Consulting Services Inc. (Stantec) conducted a paleontological resources assessment on behalf of the City of Maywood for the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project (the Project) on portions of an approximately one-mile corridor of Slauson Avenue in Maywood, Los Angeles County, California. This paleontological study was conducted in support of the proposed roadway improvements and widening for the intersection of Slauson Avenue and Atlantic Boulevard.

The proposed Project is subject to compliance with the California Environmental Quality Act (CEQA) requirements regarding the Project's potential impacts on paleontological resources. The lead agency for this Project is the City of Maywood. As part of CEQA compliance, a paleontological resources assessment was conducted to assess potential impacts of the proposed Project on paleontological resources.

This paleontological resources assessment consisted of an analysis of existing data including a museum records search from the Natural History Museum of Los Angeles County and a review of the most recent geologic mapping, relevant scientific literature, and the online collections of the University of California Museum of Paleontology. This research was used to assign paleontological potential rankings of the Society of Vertebrate Paleontology (2010) to the geologic units present in the Project area, either at the surface or in the subsurface. Following this, Project plans were reviewed to identify any potential impacts to paleontological resources and develop appropriate mitigation recommendations to reduce potential impacts to less than significant.

The results of this study indicate that one geologic unit is likely present in the Project area: alluvium, which is assessed as having low-to-high paleontological potential, increasing with depth. In order to avoid impacts to paleontological resources and satisfy CEQA requirements, Stantec recommends a qualified paleontologist meeting professional standards as defined by Murphey et al. (2019) be retained as the designated Project Paleontologist to oversee all aspects of paleontological mitigation. In order to avoid impacts to paleontological resources, Stantec recommends the following mitigation activities for the Project:

1. A paleontologist meeting professional standards as defined by Murphey et al. (2019) shall be retained as the Project Paleontologist to oversee all aspects of paleontological mitigation, including paleontological monitoring of earthwork and ground disturbing activities into undisturbed geologic units with high paleontological potential, to be conducted by a paleontological monitor meeting industry standards (Murphey et al. 2019). Within the Project area, older alluvium has high paleontological potential and is present at estimated depths of 10 feet below ground surface.

The paleontological monitoring program should include development of a Paleontological Resources Monitoring and Mitigation Plan that outlines where and when monitoring is necessary, onsite (full-time) paleontological monitoring of ground disturbance over 10 feet in depth, an unanticipated discoveries plan in the event that fossils are encountered, and final reporting.

**Paleontological Resources Assessment for the Slauson Avenue and Atlantic Boulevard
Congestion Relief Improvements Project, Los Angeles County, California**

2. The Project Paleontologist shall develop a Worker's Environmental Awareness Program training that communicates requirements and procedures for the inadvertent discovery of paleontological resources during construction to be delivered by the paleontologist or their designated representative to the construction crew prior to the onset of ground disturbance.
3. In the event that paleontological resources are encountered during construction activities, all work must stop in the immediate vicinity of the finds while the paleontological monitor documents the find. The designated Project Paleontologist shall assess the find. Should the Project Paleontologist assess the find as significant, the find shall be collected and curated in an accredited repository along with all necessary associated data and curation fees.

Based on the findings in this study and the implementation of the above mitigation recommendations, the proposed Project should not cause an adverse impact to paleontological resources. Therefore, additional paleontological resource studies are not recommended or required at this time. Changes to the Project plans or Project area from those assessed in this study will require additional assessment for impacts to paleontological resources.

Glossary

Paleontological Monitor	An individual who has academic training (B.S., B.A., M.A., or M.S.) with an emphasis in paleontology or demonstrated equivalent experience (a minimum of two years of cumulative professional or nonprofessional work in laboratory preparation, curation, or field work related to paleontology, as well as documented self-taught knowledge of the discipline of paleontology). [Murphey et al. 2019]
Paleontological Monitoring	Full-time observation of construction activities in high potential geologic units by a paleontological monitor, under supervision of the project paleontologist.
Paleontological Resource	Fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years) [Society of Vertebrate Paleontology 2010]
Project Paleontologist	Someone with an advanced academic degree (M.A., M.S. or Ph.D.) with an emphasis in paleontology or demonstrated equivalent professional experience (e.g., minimum of 3 years [or 75 projects] of project experience with paleontological mitigation is considered equivalent to a graduate degree), in combination with 2 years (or 50 projects) of demonstrated professional experience and competency with paleontological resource mitigation projects at the level of field supervisor. [Murphey et al. 2019]
Spot check	A short inspection of excavations and subsurface conditions conducted by the paleontological monitor in order to confirm excavations are impacting low potential geologic units.

1 Introduction

Stantec Consulting Services Inc. (Stantec) conducted a paleontological resources assessment on behalf of the City of Maywood for the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project (the Project) on portions of an approximately one-mile corridor of Slauson Avenue in Maywood, Los Angeles County, California. This paleontological study was conducted in support of the proposed roadway improvements and widening for the intersection of Slauson Avenue and Atlantic Boulevard.

The proposed Project is subject to compliance with the California Environmental Quality Act (CEQA) requirements regarding the Project's potential impacts on paleontological resources. The lead agency for the Project is the City of Maywood. As part of CEQA compliance, a paleontological resources assessment was conducted to assess potential impacts of the proposed Project on paleontological resources.

1.1 Project Description

The Project will widen the Slauson Avenue and Atlantic Boulevard intersection to relieve congestion during both morning and evening peak hours, and to alleviate existing queuing conditions to accommodate projected traffic in the area. Construction and operational-related activities would be focused on the Slauson Avenue and Atlantic Boulevard intersection with the remaining project activities are associated with traffic signals and synchronization. Work at Slauson Avenue and Atlantic Boulevard will consist of surface grading for road widening and trenching for the relocation of utilities and other underground components of the roadway. Provided below is a description of the proposed improvements.

Roadway Widening

- Widening of the west and east legs of Slauson Avenue and south leg of Atlantic Boulevard to accommodate dual left turn lanes at the intersection in eastbound Slauson Avenue and northbound Atlantic Boulevard direction, as recommended in the I-710 CRP.
- Reconstruct the curb returns at all four corners to accommodate current Caltrans Truck Turning Standards.
- Close the mid-block median opening along Slauson Avenue to provide a longer eastbound dual left turn storage pocket and eliminate the conflicting left turn movements to and from the *Food4Less* commercial center.
- Reduce the width of the existing median islands along the east and west legs of Slauson Avenue and north leg of Atlantic Boulevard and remove the existing median along the south leg of Atlantic Boulevard of the intersection to accommodate the dual left turn lanes. The existing landscaping/trees, utilities and City entry monument signs within these median islands would be removed or relocated.
- Grind and overlay with asphalt concrete pavement the existing concrete intersection / approaches and construct new decorative paver crosswalks.

Paleontological Resources Assessment for the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project, Los Angeles County, California

1 Introduction

- Curb Returns: New curb returns at all four quadrants of the Slauson Avenue/Atlantic Boulevard intersection would be constructed.
- Lane and Crosswalk Restriping: In order to accommodate the new intersection geometries and lane configurations at the Slauson Avenue/Atlantic Boulevard intersection, restriping of the roadway and intersection are needed and would include all through and turning lanes and crosswalks for all roadway quadrants.

Traffic Signals

- Upgrade traffic signals and traffic signal synchronization at nine (9) intersections along the Slauson Avenue Corridor between Atlantic Boulevard and Maywood Avenue including:
 - o Maywood Avenue
 - o Everett Avenue
 - o Loma Vista Avenue
 - o Carmelita Avenue
 - o Corona Avenue
 - o Gifford Avenue
 - o Fishburn Avenue
 - o Pine Avenue
 - o Atlantic Boulevard
- Provide new protected left turn phasing at these intersections and other upgrades anticipated to include but not limited to replacement of existing 8-inch vehicle heads with new 12-inch signal heads, and replacing missing or damaged signal backplates, non-Americans with Disabilities Act (ADA)-compliant pedestrian push buttons, and non-standard controller cabinets. Additional improvements may include video detection, ladder crosswalks, and backup batteries.
- Construct new ADA-compliant curb ramps, if necessary.
- Coordinate signal upgrade and timing/coordination improvements with the Los Angeles County Department of Public Works.

Signage

- Remove the existing commercial signs at the northwest and southeast corners of the Slauson Avenue/Atlantic Boulevard intersection to accommodate the roadway widening and replace on-site at City-designated locations in cooperation with business owners.

Paleontological Resources Assessment for the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project, Los Angeles County, California

1 Introduction

On-Street Parking

- One (1) parking stall would be removed due to the widening improvements at 5900 Atlantic Boulevard, south of the driveway along Atlantic Boulevard.

Off-Street Parking

- A total of one to three parking stalls in the retail center (4457 Slauson Avenue) located at the northwest corner of the intersection would be affected, resulting in their elimination, due to the widening improvements.

Additional Improvements

- 4457 Slauson Avenue: Improvements to the parking lot at northwest corner which includes removal of three parking stalls and reconstruction of an existing planter.
- 4487 Slauson Avenue: Improvements adjacent to dentist building at northwest corner which include: providing retaining curb/wall at the ROW, providing a new step at the stairway at the eastern side of the building.
- 4501 Slauson Avenue: Reconstruct a portion of an existing driveway, reconstruct the existing parkway drain, and reconstruct the existing private walk.
- 5900 Atlantic Boulevard: Reconstruct the existing driveway, repave behind the new driveway, reconstruct the existing private walk, reconstruct the existing curb drain, and restripe three existing parking stalls / install new wheel stops.

Public Transit

- Relocate three existing Metro bus stops further away from the intersection (in coordination with Metro) to facilitate truck turning movements as follows:
 - Route Number 108: Westbound Slauson Avenue, west of Atlantic Boulevard: relocate the existing bus shelter approximately 60 feet from its current location.
 - Route Number 260: Northbound Atlantic Boulevard, north of Slauson Avenue: install a new bus shelter approximately 40 feet from its current location.
- Route Number 260 and Number 611: Southbound Atlantic Boulevard, north of Slauson Avenue: install a new bus shelter approximately 10 feet from its current location.

Utilities and Drainage

Storm Drain/Catchment Basins: An existing City catchment basin located along southbound Atlantic Boulevard, north of Slauson Avenue would need to be reconstructed and would tie-in to the existing storm drain system. Additionally, a City parkway culvert adjacent to 4501 Slauson Avenue and a private curb

Paleontological Resources Assessment for the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project, Los Angeles County, California

1 Introduction

drain within the parking lot of 5900 Atlantic Boulevard would need to be reconstructed, and one (1) existing City storm drain manhole would need to be adjusted to grade.

Street Lighting: Two (2) existing City streetlights along Slauson Avenue and one (1) existing City streetlight along Atlantic Boulevard would need to be relocated. Additionally, one (1) existing City bus stop light would need to be relocated at southbound Atlantic Boulevard bus stop and two (2) new City bus stop lights would need to be installed at the other two relocated bus stops. Finally, some existing City streetlight conduits and handholes may need to be relocated to accommodate the widening improvements.

Electrical: The existing City electrical conduit, handholes, and landscape lighting running within the existing median along Slauson Avenue, west of the Atlantic Boulevard, and Atlantic Boulevard, north of Slauson Avenue would need to be reconstructed to accommodate the modified medians. The existing City electrical conduit running within the existing median along Atlantic Boulevard, south of Slauson Avenue, would be removed. Finally, some existing Southern California Edison owned conduits and handholes may need to be relocated to accommodate the widening improvements.

Water: The domestic water pipes in the Project area are owned by Maywood Mutual Water Company's Number 1, Number 2, and Number 3. Three existing water services, meters, and backflow preventers serving the existing median landscaping would be removed; one existing water service and meter would be relocated; three existing backflow preventers would be relocated; three existing water meter boxes and lids would be removed and reconstructed to grade, six existing water valve boxes and covers would be removed and reconstructed to grade; one existing water valve box and cover would be removed; and two existing fire hydrants would be relocated.

Sewer: The sewer pipes in the Project area are owned by the Los Angeles County Sanitation District. One existing sewer manhole frame and cover would need to be adjusted to grade.

Telecommunications: The telecommunications utilities in the Project area are owned by AT&T Distribution, Charter (Spectrum), Crown Castle, and MCI (Verizon). Some of these conduits may need to be relocated to accommodate the widening improvements.

Gas: The gas utilities in the Project area are owned by Southern California Gas Company (Distribution). Five existing gas valve boxes and covers would need to be adjusted to grade and some of the gas lines may need to be relocated to accommodate the widening improvements.

Common Utilities: The existing City irrigation system would be removed from the median along Slauson Avenue, west of Atlantic Boulevard, and along Atlantic Boulevard, south of Slauson Avenue. Additionally, some portions of the existing City irrigation system would be impacted at the four curb returns of the intersection at Slauson Avenue and Atlantic Boulevard.

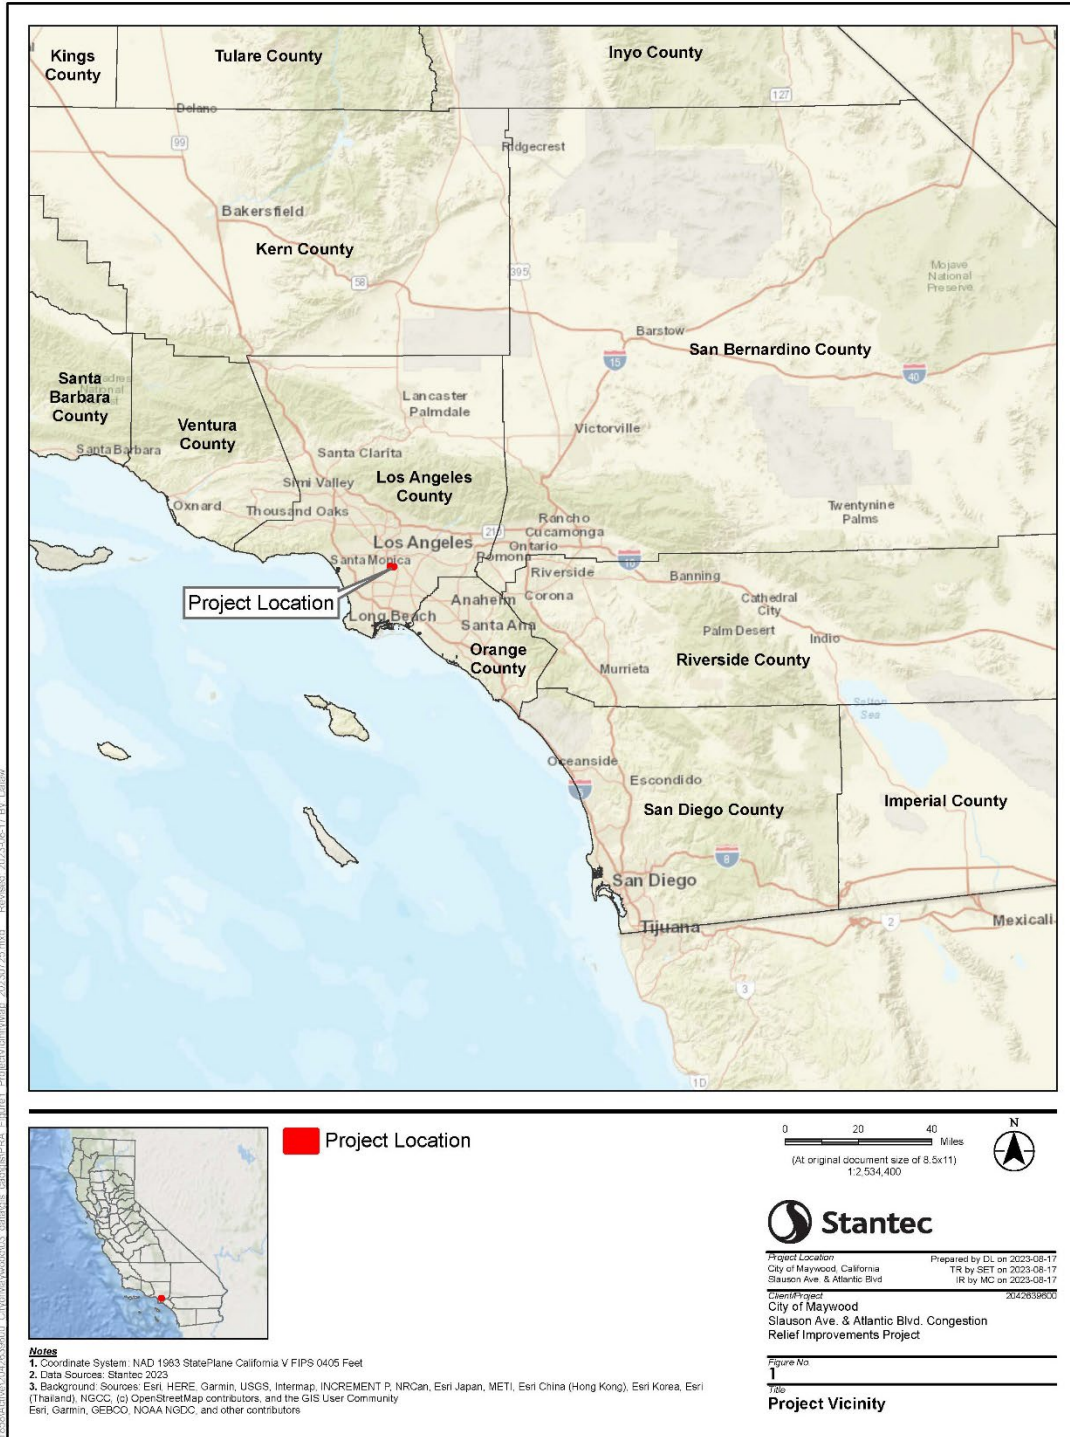

1.2 Project Location

The proposed Project is located along an approximately one-mile corridor of Slauson Avenue in Maywood, Los Angeles County, California (Figure 1). Specifically, the Project area extends between the

1 Introduction

intersections of Maywood Avenue on the western end of the project and Atlantic Boulevard on the eastern end of the Project. The Project area is located in portions of Section 19 Township 20 South, Range 12 West, and Section 24 Township 20 South and Range 13 West as depicted on the South Gate, California United States Geological Survey 7.5-minute series topographic quadrangle (Figure 2).

1.3 Paleontological Resources

Fossils are any evidence of ancient life. This includes the remains of the body of an organism, such as bones, skin impressions, shell, or leaves, as well as traces of an organism's activity, such as footprints or burrows, called trace fossils. In addition to the fossils themselves, geologic context is an important component of paleontological resources, and includes the stratigraphic placement of the fossil as well as the lithology of the rock in order to assess paleoecologic setting, depositional environment, and taphonomy. Fossils are protected by federal, state, and local regulations as nonrenewable natural resources.

While CEQA does not define a significance threshold for paleontological resources, the standards of the Society of Vertebrate Paleontology (SVP) (2010) are often used in the absence of a legal definition of significance. The SVP defines significant paleontological resources as:

identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years). [SVP 2010: 11].

Furthermore, the Paleontological Resources Preservation Act (PRPA) defines paleontological resources as:

Any fossilized remains, traces, or imprints of organisms, preserved in or on the earth's crust, that are of paleontological interest and that provide information about the history of life on earth, except that the term does not include— (A) any materials associated with an archaeological resource (as defined in section 3(1) of the Archaeological Resources Protection Act of 1979 (16 U.S.C. 470bb(1)); or (B) any cultural item (as defined in section 2 of the Native American Graves Protection and Repatriation Act (25 U.S.C. 3001)). [PRPA Sec. 6301]

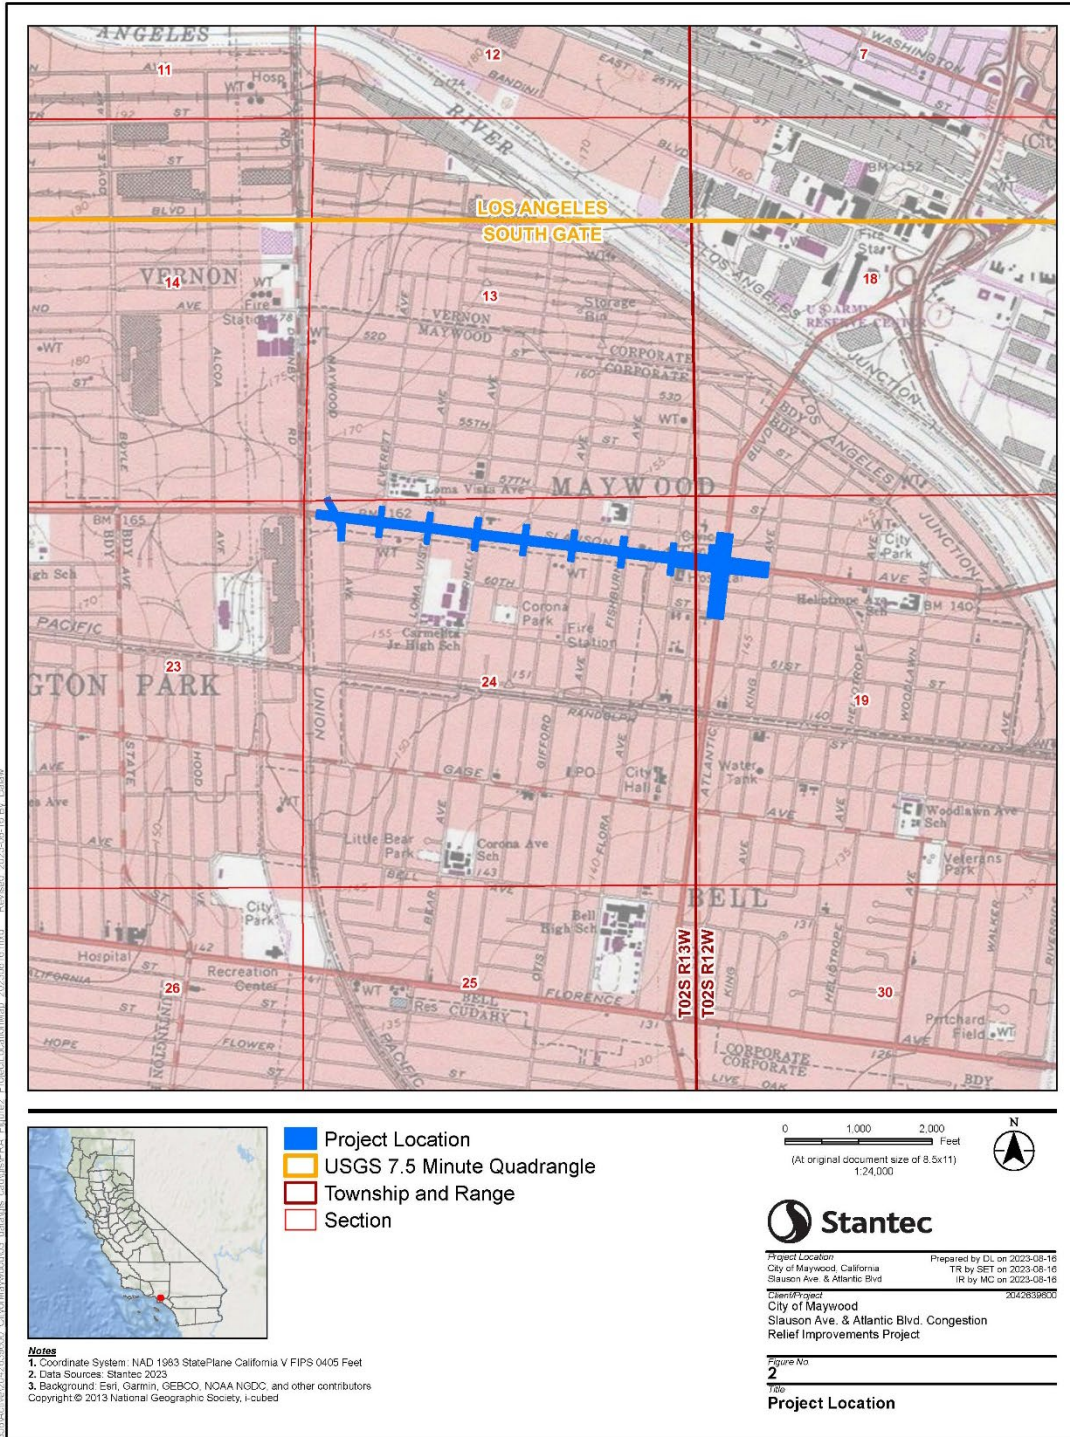

Using this definition, the concept of scientific importance, or significance, is included in the definition of paleontological resources; thus, not all fossils are considered to be paleontological resources under the PRPA.

It should be noted that the threshold for significance varies with factors including geologic unit, geographic area, and the current state of scientific research, and may also vary between different agencies (Murphey et al. 2019). Numerous paleontological studies have developed criteria for the assessment of significance for fossil discoveries (e.g., Eisentraut and Cooper 2002, Murphey et al. 2019, Murphey and Daitch 2007, Scott and Springer 2003). In general, these studies assess fossils as significant if one or more of the following criteria apply:

Paleontological Resources Assessment for the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project, Los Angeles County, California

1 Introduction

- The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct.
- The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events, through biochronology or biostratigraphy and the correlation with isotopic dating.
- The fossils provide ecological data, such as the development of biological communities, the interaction between paleobotanical and paleozoological biotas, or the biogeography of lineages.
- The fossils demonstrate unusual or spectacular circumstances in the history of life.
- The fossils provide information on the preservational pathways of paleontological resources, including taphonomy, diagenesis, or preservational biases in the fossil record.
- The fossils are in short supply and/or in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.
- The fossils inform our understanding of anthropogenic affects to global environments or climate.

A geologic unit known to contain significant paleontological resources is considered sensitive to adverse impacts if there is a high probability that earth-moving or ground-disturbing activities in that rock unit will either disturb or destroy fossil remains directly or indirectly. This definition of sensitivity differs fundamentally from the definition for archaeological resources as follows:

It is extremely important to distinguish between archaeological and paleontological (fossil) resource sites when defining the sensitivity of rock units. The boundaries of archaeological sites define the areal extent of the resource. Paleontological sites, however, indicate that the containing sedimentary rock unit or formation is fossiliferous. The limits of the entire rock formation, both areal and stratigraphic, therefore define the scope of the paleontological potential in each case. [SVP 2010: 2].

Many archaeological sites contain features that are visually detectable on the surface. In contrast, fossils are often contained within surficial sediments or bedrock and are therefore not observable or detectable unless exposed by erosion or human activity.

In summary, in the absence of observable paleontological resources on the surface, paleontologists must assess the potential of geologic units as a whole to yield paleontological resources based on their known potential to produce significant fossils elsewhere. Monitoring by experienced paleontologists greatly increases the probability that fossils will be discovered during ground-disturbing activities and that, if these remains are significant, successful mitigation and salvage efforts may be undertaken to prevent adverse impacts to these resources.

2.0 Regulatory Framework

California has enacted multiple laws and regulations that provide for the protection of paleontological resources. This investigation was conducted to meet these requirements regarding paleontological resources on the lands proposed for development.

2.1 State of California

2.1.1 CALIFORNIA ENVIRONMENTAL QUALITY ACT

CEQA (Public Resources Code [PRC] Sections 21000 et seq) requires that before approving most discretionary projects, the Lead Agency must identify and examine any significant adverse environmental effects that may result from activities associated with such projects. As updated in 2016, CEQA separates the consideration of paleontological resources from cultural resources (PRC Section 21083.09). The Appendix G checklist (Title 14, Division 6, Chapter 3, California Code of Regulations 15000 et seq.) requires an answer to the question, “Will the proposed project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?” Under these requirements, Stantec has conducted a paleontological resources assessment to determine impacts of the proposed project on paleontological resources within the Project area.

2.1.2 PUBLIC RESOURCES CODE

The California PRC (Chapter 1.7, Sections 5097 and 30244) includes additional state-level requirements for the assessment and management of paleontological resources. These statutes require reasonable mitigation of adverse impacts to paleontological resources resulting from development on state lands, define the removal of paleontological sites or features from state lands as a misdemeanor, and prohibit the removal of any paleontological site or feature from state land without permission of the applicable jurisdictional agency.

3.0 Professional Standards

The SVP (2010) and a number of scientific studies (Eisentraut and Cooper 2002; Murphey et al. 2019; Scott and Springer 2003) have developed guidelines for professional qualifications, conducting paleontological assessments, and developing mitigation measures for the protection of paleontological resources. These guidelines are broadly similar, and include the use of museum records searches, scientific literature reviews, and, in some cases, field surveys to assess the potential of an area to preserve paleontological resources. Should that potential be high, accepted mitigation measures include paleontological monitoring, data recordation of all fossils encountered, collection and curation of significant fossils and associated data, and in some cases screening of sediment for microfossils.

This study has been conducted in accordance with these guidelines and the recommendations provided herein meet these standards.

4.0 Geologic Setting

4.0 Geologic Setting

The Project area is in the Los Angeles Basin, a structural depression approximately 50 miles long and 20 miles wide in the northernmost Peninsular Ranges Geomorphic Province (Ingersoll and Rumelhart 1999). The Los Angeles basin developed as a result of tectonic forces and the San Andreas fault zone, with subsidence occurring 18 – 3 million years ago (Critelli et al. 1995). While sediments dating back to the Cretaceous (66 million years ago) are preserved in the basin, continuous sedimentation began in the middle Miocene (around 13 million years ago) and continues today, resulting in thousands of feet of accumulation (Yerkes et al. 1965). Most of these sediments are marine, until sea level dropped in the Pleistocene and deposition of the alluvial sediments that compose the uppermost units in the Los Angeles Basin began.

The Los Angeles Basin is subdivided into four structural blocks, with the Project area occurring in the Central Block, where sediments range from 32,000 to 35,000 feet thick (Yerkes et al. 1965). The Central Block is wedge-shaped, extending from the Santa Monica Mountains in the northwest, where it is about 10 miles wide, to the San Joaquin Hills to the southeast, where it widens to around 20 miles across (Yerkes et al. 1965).

5.0 Methodology

The paleontological resource assessment reported herein consisted of an analysis of existing data incorporating a museum records search from the Natural History Museum of Los Angeles County (LACM) and a review of the scientific literature, geologic mapping, and the online database of the University of California Museum of Paleontology (UCMP). The UCMP's database does not provide specific geographic locations beyond the county the fossils were recovered from but does include locality names that can sometimes be used to infer the general area of the locality.

To assess if paleontological resources are likely to be encountered in any given area, the paleontological potential of the geologic units present in the area is assessed. Paleontological potential of a geologic unit consists of both (a) the potential for yielding abundant vertebrate fossils or for yielding significant fossils, large or small, vertebrate, invertebrate, plant, or trace fossils and (b) the importance of recovered evidence for new and significant taxonomic, phylogenetic, paleoecologic, taphonomic, biochronologic, or stratigraphic data (SVP 2010). Unlike archaeological resources that often have a limited aerial extent, paleontological resources may occur throughout a geologic unit, and so paleontological potential is assessed for the unit as a whole. Provided below is the methodology used during the current study to assess the potential of the Project to impact paleontological resources.

The paleontological assessment presented here was conducted by Stantec Principal Paleontologist Alyssa Bell, Ph.D. Geographic Information System (GIS) maps and figures were drafted by GIS Technician Danny Law, B.S. This report was authored by Paleontologist Matthew Cline, M.S., and peer reviewed by Principal Paleontologist Alyssa Bell, Ph.D. Stantec's work in support of the Project was

**Paleontological Resources Assessment for the Slauson Avenue and Atlantic Boulevard
Congestion Relief Improvements Project, Los Angeles County, California
5.0 Methodology**

managed by Principal Mohammad Heiat, M.S., who coordinated all work and provided quality assurance and control.

5.1 Analysis of Existing Data

In order to assess the paleontological potential of the Project area, the most recent geologic mapping of the Project area and vicinity (Saucedo et al. 2003) was consulted to identify all geologic units present at the surface or likely present in the subsurface. A records search was obtained from the Natural History Museum of Los Angeles County (LACM) (Appendix A) and a review of the scientific literature was conducted to determine the history of each of the geologic units mapped as present at the surface or likely present in the subsurface of the Project area for preserving paleontological resources.

5.2 Paleontological Resources Assessment

The results of the desktop analysis were used to assign the paleontological potential rankings of the SVP (2010) to the geologic units likely present in the Project area. These rankings are designed to inform the development of appropriate mitigation measures for the protection of paleontological resources and are widely accepted as industry standards in paleontological mitigation (Murphey et al. 2019; Scott and Springer 2003). These rankings are as follows:

High Potential. Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. Rock units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations that are temporally or lithologically suitable for the preservation of fossils (e. g., middle Holocene and older, fine-grained fluvial sandstones, argillaceous and carbonate-rich paleosols, cross-bedded point bar sandstones, fine-grained marine sandstones, etc.), some volcanoclastic formations (e. g., ashes or tephra), and some low-grade metamorphic rocks.

Undetermined Potential. Rock units for which little information is available in the literature or museum records concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study and field work is necessary to determine if these rock units have high or low potential to contain significant paleontological resources.

Low Potential. Rock units that are poorly represented by fossil specimens in institutional collections or, based on general scientific consensus, only preserve fossils in rare circumstances (e. g., basalt flows or Recent colluvium) have low paleontological potential.

No Potential. Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites).

Following the assessment of paleontological potential, an impacts assessment was conducted comparing planned Project activities in terms of locations, depths, and ground disturbance methods with mapped

**Paleontological Resources Assessment for the Slauson Avenue and Atlantic Boulevard
Congestion Relief Improvements Project, Los Angeles County, California
5.0 Methodology**

geologic units. Where potential adverse impacts from Project activities were identified, mitigation recommendations were developed to reduce those impacts to less than significant.

5.3 Paleontological Impacts Assessment

Impacts to paleontological resources can be classified as direct, indirect, or cumulative. Impacts can also be considered as adverse impacts or as positive impacts. Direct adverse impacts on paleontological resources are the result of damage or destruction of these nonrenewable resources by surface disturbing actions including construction excavations. Therefore, in areas that contain paleontologically sensitive geologic units, ground disturbance has the potential to adversely impact paleontological resources, by damaging or destroying them and rendering them permanently unavailable to science and society. Positive direct impacts, however, may result when paleontological resources are identified during construction and the appropriately documented and salvaged, thus ensuring the specimens are protected for future study and education.

Indirect impacts typically include those effects which result from the continuing implementation of management decisions and resulting activities, including normal ongoing operations of facilities constructed within a given project area. They also occur as the result of the construction of new roads and trails in areas that were previously less accessible. This increases public access and therefore increases the likelihood of the loss of paleontological resources through vandalism and unlawful collecting, thus constituting an adverse indirect impact. Human activities that increase erosion also cause indirect impacts to surface and subsurface fossils as the result of exposure, transport, weathering, and reburial.

Cumulative adverse impacts can result from incrementally minor but collectively significant actions taking place over time. The incremental loss of paleontological resources over time from construction-related surface disturbance or vandalism and unlawful collection would represent a significant cumulative adverse impact, because it would result in the destruction of non-renewable paleontological resources and the associated irretrievable loss of scientific information.

The impact assessment conducted here takes into consideration all planned project activities in terms of aerial and subsurface extents, including the possibility of subsurface geologic units having a different paleontological potential than surficial units. For example, younger surficial sediments (alluvium, lacustrine, eolian, etc.) have low potential to preserve paleontological resources due to their age; yet sediments increase in age with depth and so these surficial deposits often overly older units that have high paleontological potential. In areas with this underlying geologic setting surficial work may be of low risk for impacting paleontological resources while activities that require excavations below the depth of the surficial deposits would be at greater risk of impacting paleontological resources. For this reason, the impact assessment takes into consideration both the surface and subsurface geology and is tailored to Project activities.

6.0 RESULTS

6.1 Project Area Geology and Paleontology

Geologic mapping by Saucedo et al. (2003) indicates the surface of the Project area consists of one geologic unit: alluvium (Figure 3). This geologic unit ranges in age from the Recent to the Holocene (roughly 11,700 years ago) and is described below.

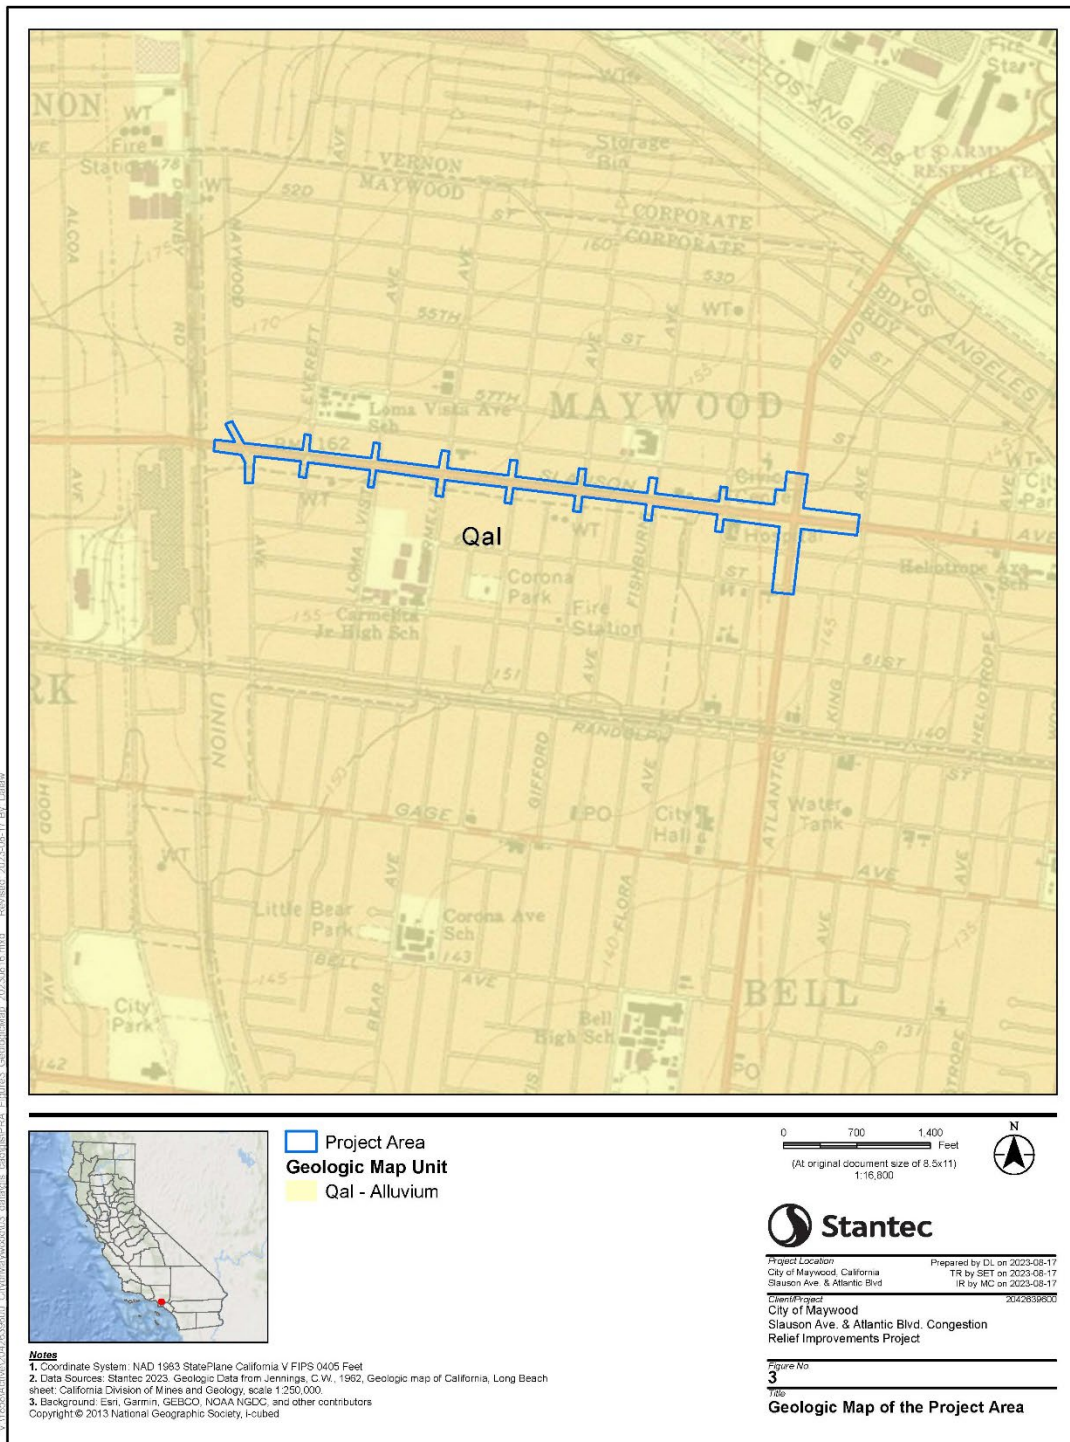

Alluvium (Qal in Figure 3). Alluvial sediments are found across the surface of the Project area. These sediments consist of poorly consolidated and poorly sorted clay, sand, gravel and cobble alluvial fan and valley deposits (Saucedo et al. 2003). These sediments are relatively young in age, dating from the Recent to the early Holocene, and are likely underlain by older Pleistocene aged sediments at undetermined depths. While at the surface these sediments are too young to preserve fossils (under 5,000 years, as per the SVP [2010]), they increase in age with depth such that in the subsurface they are over 5,000 years old and may preserve fossils.

A paleontological records search was requested from the LACM on August 17, 2023, with the results delivered to Stantec on Augusts 20, 2023. The results indicate six fossil localities reported in unnamed Pleistocene aged sediments are within 10 miles of the Project area (Table 1). These fossil localities were discovered at depths as shallow of 15 feet below ground surface. Some of the recorded localities did not have a depth recorded. A search of the UCMP's database indicate over 200 fossil localities are recorded within Los Angeles County in unnamed Pleistocene aged sediments.

A review of the scientific literature further establishes the types of fossils known from similar early Holocene and Pleistocene sediments in the region. These fossils represent a rich Ice Age fauna, including include animals found in North America today, such as deer, bison, sheep, and horses, as well as creatures no longer found in North America, such as camels, lions, cheetahs, and sloths, and extinct creatures such as mammoths, dire wolves, and saber-toothed cats (Jefferson 1989, 1991a, 1991b; Graham and Lundelius 1994; McDonald and Jefferson 2008; Reynolds and Reynolds 1991). In addition to these iconic large animals, a wide variety of small animals can be preserved, including reptiles such as frogs, salamanders, snakes, and birds (Jones et al. 2008, Springer et al. 2009, Reynolds 1989). These fossils are important for recreating the history of Southern California, in particular studying climate change (e.g., Roy et al. 1996, Traylor et al. 2015), extinction (e.g., Barnosky et al. 2004, Jones et al. 2008, Sandom et al. 2014, Scott 2010), and paleoecology (e.g., Connin et al. 1998).

Table 1 Summary of the records search from the Natural History Museum of Los Angeles County

Locality Number	Geologic Unit	Taxa	Approximate Location
LACM VP 7702	Unknown formation, (Pleistocene; silt)	Fish (<i>Gasterosteus</i>); Snake (<i>Colubridae</i>), Rodents (<i>Thomomys</i> , <i>Microtus</i> , <i>Reithrodontomys</i>); Rabbit (<i>Sylvilagus</i>)	1.7 miles north of the Project area
LACM VP 3363	Unknown formation, (Pleistocene)	Horse (<i>Equus</i>)	5.8 miles north of the Project area
LACM VP 1225	Unknown formation, (Pleistocene; sand and silt)	Mammoth (<i>Mammuthus</i>)	8.7 miles southwest of the Project area
LACM IP 2690	Unknown formation, (Pleistocene)	Acorn barnacle (<i>Megabalanus</i>), scaphopod (<i>Dentalium</i>), (<i>Stagnicola</i>), pond snails (<i>Callianax</i>), moon snail (<i>Euspira</i>), turban snail (<i>Megastrea</i>), Venus clam (<i>Tivela</i>), piddock (<i>Penitella</i>), cardita (<i>Cyclocardia</i>), tellin (<i>Tellina</i>), lucine (<i>Lucinisca</i> , <i>Epilucina</i>), cerith (<i>Lirobittium</i>), sand dollar (<i>Dendraster</i>), cowry (<i>Neobernaya</i>), tower shell (<i>Turritella</i>), dwarf-venus (<i>Nutricola</i>)	6.6 miles southwest of the Project area
LACM VP 7758	Unknown formation, (Pleistocene)	Three-spined stickleback (<i>Gasterosteus</i>); Rodents (<i>Perognathus</i> , <i>Thomomys</i> , <i>Microtus</i>)	8 miles west of the Project area
LACM VP 3365	Unnamed formation, (Pleistocene)	Mammoth (<i>Mammuthus</i>)	11 miles south of the Project area

6.2 Paleontological Potential of Geologic Units in the Project Area

In order to assess the potential of the geologic units present at the surface or in the subsurface to preserve paleontological resources, Stantec conducted an analysis of existing data, as described above. These investigations were used to assign the paleontological potential rankings of the SVP (2010) to the geologic units present at the Project area, both at the surface and in the subsurface. The results of this assessment are described below.

Alluvium (Qal in Figure 3). The alluvial sediments present in the Project area date to the Holocene, which ranges from the present to 11,700 years old. As defined by the SVP (2010), paleontological resources must be over 5,000 years in age, corresponding to the middle part of the Holocene. Therefore, the alluvial sediments in the Project area are too young at the surface to preserve paleontological resources, but increase in age with depth, such that they may preserve fossils in the subsurface. The review of scientific literature and records search performed by the LACM (2023) documents fossils in other unnamed Holocene-to-Pleistocene units from nearby locations at depths as shallow as 15 feet below ground surface. Therefore, areas mapped as alluvium should be considered to have low-to-high paleontological potential, increasing with depth. The exact depth at which this transition occurs is unknown but estimated to be around 10 feet below ground surface, based on documented fossil localities in the Los Angeles Basin.

6.3 Potential Impacts to Paleontological Resources from Project Activities

The Project plans to a variety of improvements to the Slauson Avenue and Atlantic Boulevard intersection. This will entail ground disturbance consisting of surface grading for road widening and trenching for the relocation of utilities and other underground components of the roadway. The exact depths of this disturbance are unknown. Should ground disturbance exceed 10 feet in depth, it risks impacting early Holocene or older alluvial sediments with high paleontological potential.

Should paleontological resources be encountered during construction, their damage or destruction would constitute a direct adverse impact. Therefore, Stantec has developed recommendations for mitigation that will avoid damage or destruction of paleontological resources in the Project area, thus reducing direct adverse impacts to less than significant. It is not anticipated that the Project will pose indirect or cumulative adverse impacts to paleontological resources, as the final Project will not entail increased exposure or erosion of native sediments beyond the duration of the ground disturbance described above.

7.0 Recommendations and Management Considerations

The paleontological resources assessment described herein conducted an analysis of existing data, consisting of a records search from the LACM and a review of geologic mapping, the scientific literature, and the online collections of the UCMP, to assess the potential of the geologic units in the Project area to preserve paleontological resources. The results of this assessment show that geologic units with high paleontological potential are likely present in the subsurface at estimated depths of greater than 10 feet throughout the Project area.

Project activities may include surface grading and trenching for the relocation of utilities. Should Project-related activities encounter paleontological resources, the damage or destruction of those resources would constitute an adverse impact under CEQA. In order to avoid impacts to paleontological resources, Stantec recommends a qualified paleontologist meeting professional standards as defined by Murphey et al. (2019) be retained as the designated Project Paleontologist to oversee all aspects of paleontological mitigation. In order to avoid impacts to paleontological resources, Stantec recommends the following mitigation activities for the Project:

1. A paleontologist meeting professional standards as defined by Murphey et al. (2019) shall be retained as the Project Paleontologist to oversee all aspects of paleontological mitigation, including paleontological monitoring of earthwork and ground disturbing activities into undisturbed geologic units with high paleontological potential, to be conducted by a paleontological monitor meeting industry standards (Murphey et al. 2019). Within the Project area, older alluvium has high paleontological potential and is present at estimated depths of 10 feet below ground surface.

The paleontological monitoring program should include development of a Paleontological Resources Monitoring and Mitigation Plan that outlines where and when monitoring is necessary,

**Paleontological Resources Assessment for the Slauson Avenue and Atlantic Boulevard
Congestion Relief Improvements Project, Los Angeles County, California**

8.0 REFERENCES

onsite (full-time) paleontological monitoring of ground disturbance over 10 feet in depth, an unanticipated discoveries plan in the event that fossils are encountered, and final reporting.

2. The Project Paleontologist shall develop a Worker's Environmental Awareness Program training that communicates requirements and procedures for the inadvertent discovery of paleontological resources during construction to be delivered by the paleontologist or their designated representative to the construction crew prior to the onset of ground disturbance.
3. In the event that paleontological resources are encountered during construction activities, all work must stop in the immediate vicinity of the finds while the paleontological monitor documents the find. The designated Project Paleontologist shall assess the find. Should the Project Paleontologist assess the find as significant, the find shall be collected and curated in an accredited repository along with all necessary associated data and curation fees.

Based on the findings in this study and the implementation of the above mitigation recommendations, the proposed Project should not cause an adverse impact to paleontological resources. Therefore, no additional paleontological resource studies are recommended or required at this time. Changes to the Project plans or Project area from those assessed in this study will require additional assessment for impacts to paleontological resources.

Stantec Consulting Services Inc
Attn: Matthew Cline

re: Paleontological resources for the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements Project (#2042639600)

Dear Matthew:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the Slauson Avenue and Atlantic Boulevard Congestion Relief Improvements project area as outlined on the portion of the South Gate USGS topographic quadrangle map that you sent to me via e-mail on August 17, 2023. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County (NHMLA).

Locality Number	Location	Formation	Taxa	Depth
LACM VP 7702	Intersection of 26th St and Atlantic Blvd, Bell Gardens	Unknown Formation (Pleistocene; silt)	Fish (<i>Gasterosteus</i>); Snake (Colubridae), Rodents (<i>Thomomys</i> , <i>Microtus</i> , <i>Reithrodontomys</i>); Rabbit (<i>Sylvilagus</i>)	30 feet bgs
LACM VP 3363	W of Monterey Pass Road in Coyote Pass; E of the Long Beach Freeway & S of the N boundary of Section 32; Monterey Park	Unknown Formation (Pleistocene; sand and silt)	Horse (<i>Equus</i>)	unknown
LACM VP 1225	354 W 99th St., Los Angeles	Unknown formation (Pleistocene)	Mammoth (<i>Mammuthus</i>)	15-20 feet bgs
LACM IP 2690	South of railroad tracks; crossing 103 St., Watts	Unknown formation (Pleistocene)	Acorn barnacle (<i>Megabalanus</i>), scaphopod (<i>Dentalium</i>), (<i>Stagnicola</i>), pond snails (<i>Callianax</i>), moon snail (<i>Euspira</i>), turban snail (<i>Megastrea</i>), Venus clam (<i>Tivela</i>), piddock (<i>Penitella</i>),	Unknown

Locality Number	Location	Formation	Taxa	Depth
LACM VP 7758	South Region Middle school No. 6; S. Western Ave & 46 th St	Unknown Formation (Pleistocene)	cardita (<i>Cyclocardia</i>), tellin (<i>Tellina</i>), lucine (<i>Luciniscia</i> , <i>Epilucina</i>), cerith (<i>Lirobittium</i>), sand dollar (<i>Dendraster</i>), cowry (<i>Neobernaya</i>), tower shell (<i>Turritella</i>), dwarf-venus (<i>Nutricula</i>)	16 feet bgs
LACM VP 3365	Athens on the Hill, Los Angeles (more precise information not available)	Unnamed formation (Pleistocene)	Three-spined stickleback (<i>Gasterosteus</i>); Rodents (<i>Perognathus</i> , <i>Thomomys</i> , <i>Microtus</i>)	Unknown

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the NHMLA. It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/26/2023 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/26/2023 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/06/2023 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/06/2023 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/23/2023 has revealed that there are 37 ENVIROSTOR sites within approximately 1 mile of the target property.

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 01/23/2023 has revealed that there are 2 SCH sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 8 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/06/2023 has revealed that there are 25 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at Proposal July 28, 1998): Pemaco Maywood is a four-acre facility that housed a chemical blending facility operated by Pemaco, Inc. between the late 1940s and 1991. Hazardous chemicals stored at the facility in underground and aboveground storage tanks and drums included chlorinated and aromatic solvents, flammable liquids, petroleum hydrocarbons, and other volatile organic compounds. There were 31 underground storage tanks, six aboveground storage tanks, and more than 400 drums on site when the facility was investigated by the Los Angeles County Fire Department in 1992. During the Expanded Site Inspection (ESI) conducted in May 1997, several volatile organic compounds were identified in near-surface and deep soil samples, as well as perched ground water and an underlying regional aquifer. Floating product consisting of total petroleum hydrocarbons (gasoline) and 12 volatile organic compounds was recovered from three wells drawing from the perched ground water. Aqueous samples from 10 other wells in the perched ground water one contained several chlorinated hydrocarbons such as tetrachloroethene (PCE), trichloroethene (TCE), 1,1,1-trichloroethane (TCA), 1,1- and 1,2-dichloroethenes, 1,1-dichloroethane, and vinyl chloride. EPA installed four monitoring wells into the shallow regional aquifer (80 to 100 feet deep) during the ESI in May 1997. Ground water samples from three of the four wells contained TCE ranging from 410 to 11,000 micrograms per liter. Although the monitoring wells penetrate a shallow regional aquifer of the Lakewood Formation, most of the drinking water wells within four miles of the site draw water from the San Pedro Formation. Approximately 100 feet of clay separate the Lakewood from the San Pedro Formation within two miles of the site. Thirteen water purveyors draw ground water from 78 wells within four miles of the site to supply drinking water to approximately 339,000 people. The nearest well to the site is 0.3 mile downgradient. The site is located next to the Los Angeles River; however, the river is not used for drinking water. There are no fisheries nor sensitive environments associated with the site. The site is in a mixed industrial and residential community, with a residential tract across the street. The Pemaco facility was a large quantity hazardous waste generator when it was in operation. Regulatory involvement at the site has been limited to EPA, with some involvement from the Los Angeles County Fire Department and the City of Maywood. Status (January 1999): EPA is considering various alternatives for the site. The description of the site release is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600,

Hazardous Waste Summary:

Waste Code: F001
Waste Description: The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID: 171210
Site Name: Western Dental
Violation Date: 01-19-2021
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 07/28/2022. OBSERVATION: Good Vibration and Speed Clean spent solutions located in the instrument processing area were observed being discharged into the sink leading to the POTW and a proper waste determination has not been made (96 hours aquatic fish bioassay). Note: Please collect solutions prior to future disposal. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the Good Vibration, and Speed Clean spent solution has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 171210
Site Name: Western Dental
Violation Date: 05-23-2019
Citation: 22 CCR 23 66273.31(a) - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.31(a)
Violation Description: Failure of the universal waste handler to prevent improper disposal of universal waste, or to transfer universal waste to the appropriate destination facility.
Violation Notes: Returned to compliance on 01/19/2021. OBSERVATION: Dental Amalgam being managed as medical waste. The Universal Waste Handler improperly disposed of, or failed to transfer universal waste (Dental Amalgam) to an appropriate destination facility. CORRECTIVE ACTION: Ensure that all universal wastes are transferred to an appropriate destination facility and properly disposed. Submit documentation to the CUPA indicating that all universal waste has been transferred to an appropriate destination facility.

Violations:
Site ID: 133562
Site Name: MAYWOOD CARWASH
Violation Date: 12-27-2016
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 12/27/2016. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Observed 3 x 55 gallon drums containing non-RCRA hazardous waste liquid without all the required information on hazardous waste labels. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. Drums were properly labeled by end of inspection. Violation corrected on-site.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STATE MASTER

UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

FINDS:

Registry ID: 110002739083

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 05/01/2020. CERS ERRORS: TANK PLAN, FRCT EXP, MISSING OWN/OP AGREEMENT, '18CTLS SUBMITTED LATE. OVFL CERT MISSING.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Name: LACTZA HARD PARTS
Violation Date: 02-14-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 05/15/2020. OBSERVATION: The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. CORRECTIVE ACTION: Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 129251
Site Name: LACTZA HARD PARTS
Violation Date: 02-14-2020
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 11/06/2020. OBSERVATION: 3 X 55 gallon container of used oil located in the hazardous waste storage area was observed without a hazardous waste label. Missing information on labels. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 129251
Site Name: LACTZA HARD PARTS
Violation Date: 12-15-2016
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 12/15/2016. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Observed 1 x 60 gallon used oil AST without all the required information on hazardous waste label. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. Used oil AST was labeled with all required information by end of inspection. Violation corrected on-site.

Address: 6025 PINE AVE
City,State,Zip: MAYWOOD, CA 90270
Site ID: 613465
CERS ID: 10900189
CERS Description: Hazardous Waste Generator

Violations:

Site ID: 613465
Site Name: Maywood skilled nursing and wellness center
Violation Date: 04-22-2022
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12

Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violation Notes: Returned to compliance on 05/31/2022. OBSERVATION: The generator has not obtained an Identification Number to manage hazardous waste. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without obtaining an Identification Number. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that you have obtained an Identification Number.

Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS,

Site ID: 613465
Site Name: Maywood skilled nursing and wellness center
Violation Date: 04-22-2022
Citation: HSC 6.11 25404(e)(4) - California Health and Safety Code, Chapter 6.11, Section(s) 25404(e)(4)

Violation Description: Failure to report, and report accurately, program data (such as hazardous waste generation activities) electronically.

Violation Notes: Returned to compliance on 05/31/2022. OBSERVATION: Owner/Operator failed to report program data electronically into CERS, or reported information incorrectly. CORRECTIVE ACTION: Complete all required reporting into CERS.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)
Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 02/25/2020. OVERFILL EQUIPMENT PREVENTION OVERDUE CERS CORRECTIONS NEEDED-MONITOR PLAN UPLOAD CERS CORRECTIONS AND CONDUCT OVERFILL EQUIPMENT TEST

Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 09/23/2014. OBSERVATION: two 55 G drums unlabeled full of liquid materials, employee not sure what they are or how long they have been there; Inventory on CERS indicated they contained sump water. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. CORRECTIVE ACTION: Immediately label these containers and ensure that all containers are marked with all the required information. Since it cannot be determined how long they have been on site, immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA or show proof that they do not contain hazardous waste within 30 days.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA Enviroscreen 4 Score: 85-90%
Military DOD Site: No
Facility Project Subtype: Not reported
RWQCB Region: LOS ANGELES RWQCB (REGION 4)
Site History: The property was formerly used as an electrical substation but currently the Site is vacant. Environmental investigations found arsenic, petroleum and lead-impacts to onsite soil. A Remedial Action Plan dated December 30, 2019, which proposes excavation of the arsenic, petroleum and lead-impacted onsite soil was approved by this Department in a letter dated April 8, 2021.

Violation Date: 04-21-2022
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 04/21/2022. OBSERVED SPILL CONTAINER FAILED TO MAINTAIN LIQUID-TIGHT CONDITION DURING AN ANNUAL MONITORING CERTIFICATION INSPECTION. THE TECHNICIAN REPLACED THE DAMAGED SPILL CONTAINER WITH ANOTHER 5 GALLONS SPILL CONTAINER (OPW 5 GALLONS COMPOSITE BUCKET WITH DRAIN VALVE, P511-DEVRBUCKET) ON-SITE DURING INSPECTION. THE NEWLY INSTALLED SPILL CONTAINER WAS TESTED UPON COMPLETION OF INSTALLATION AND PASSED.

Violation Source: CERS,

Site ID: 141018
Site Name: Pacific Precision Formulators
Violation Date: 03-23-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 05/16/2017. All required elements for UST were not submitted electronically.

Violation Division: Vernon Health & Environmental Control Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 141018
Site Name: Pacific Precision Formulators
Violation Date: 02-07-2017
Citation: R5-2016-0012 - WDR for Grass Valley WWTP
Violation Description: Order Conditions
Violation Notes: Between the morning of 7 February 2017 and the morning of 13 February 2017, the Discharger conducted a partial bypass of secondary effluent to Wolf Creek in preparation for and during a period of significant precipitation. Total effluent flow to Wolf Creek ranged from 7 to 10 mgd.

Site ID: 141018
Site Name: Pacific Precision Formulators
Violation Date: 10-01-2019
Citation: R5-2016-0012 - WDR for Grass Valley WWTP
Violation Description: SW - Surface Water
Violation Notes: Temperature increase at RSW-002 was 6 degrees F on 10/1/19, and limit is 5 degrees.

Violation Division: Water Boards
Violation Program: NPDmunilrg
Violation Source: SMARTS,

Site ID: 141018
Site Name: Pacific Precision Formulators
Violation Date: 06-14-2021
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional

Site ID: 141018
Site Name: Pacific Precision Formulators
Violation Date: 10-01-2019
Citation: R5-2016-0012 - WDR for Grass Valley WWTP
Violation Description: SW - Surface Water
Violation Notes: On 10/1/19 the temperature at RSW-002 was 46.8 F, which exceeded the limitation of a 5 degree increase from RSW-001 (41 F) by 0.8 degrees. *** Dismissed: Violation was created in error by the discharger, and is redundant with violation #1072069.

Violation Division: Water Boards
Violation Program: NPDmunilrg
Violation Source: SMARTS,

Site ID: 141018
Site Name: Pacific Precision Formulators
Violation Date: 02-20-2017
Citation: R5-2016-0012 - WDR for Grass Valley WWTP
Violation Description: Order Conditions
Violation Notes: Between the morning of 20 February 2017 and the morning of 22 February 2017, the City conducted a partial bypass of secondary effluent to Wolf Creek. The Discharger estimated that approximately 1.85 mg of secondary effluent were diverted under tertiary treatment during the bypass event.

Violation Division: Water Boards

Site Name: Pacific Precision Formulators
Violation Date: 06-14-2021
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Observed spill bucket failed the hydrostatic test. The owner/operator was instructed to replace the spill bucket within 60-days. Note: UST is currently empty and not in use. CUPA staff is working with the owner/operator to remove the UST.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 07/28/1994
Comments: The Department received a U.S. EPA PA report dated 5/2/1994. The site consists of approximately 2 acres. Joe's Plastics, a plastic recycler operated at the site since 1976. From 1966 to 1976 Calmec Manufacturing operated at the site. Small quantities of perchloroethene (PCE) are used to clean the machinery onsite, and the

oil used in onsite machinery is periodically changed are the only hazardous wastes stored at the site. There is no evidence of a hazardous substances release that may constitute a threat to public health or the environment at the site. In addition, the site is a hazardous waste generator and holds the City of Vernon Hazardous Materials Permit. Therefore, the Dept. referred the site to the City of Vernon.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Background Info: Pemaco,Inc. operated from the 1950's until 1984 as a chemical blending facility and distributor, under the ownership of Marie Richards. In 1984, Lux International purchased the property and continued operating a chemical blending facility until 1991 under the ownership of Mr. Lawrence SZE. In 1991, the site became inactive. The property consists of 1.14 acres in a mixed residential and industrial neighborhood and is currently a vacant lot. As a chemcial bledning operation large quantities of chemicals where stored in 55-gallon drums, above-ground tanks, and thirty- one 500 to 20,000 gallon under ground storage tanks. A wide variety of chemicals were used on-site including but not

Comments: ROD concurrence. Cleanup design will remediate shallow soils, regrade the entire site with clean soils and implement institutional controls. High vacuum oval-phase extraction is proposed for the upper vadose zone and a combination of electrical resistance heating with vapor extraction and vacuum enhanced pump and treat for lower vadose zone is planned initially a flameless thermal oxidizer will be used with a switch out to carbon for the soil vapor. Contaminated groundwater will be treated with UV oxidation.

Action determination

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 11/17/2005
Comments: Action Required for AOC #2 and AOC #3; SSI necessary for addl charateriation

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Supplemental Site Investigation Workplan
Completed Date: 02/27/2006
Comments: Draft accepted as Final

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Cost Recovery Closeout Memo
Completed Date: 03/11/2008
Comments: Cost Recovery Closeout Memo completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 03/07/2008
Comments: Completed

Future Area Name: Not reported
Future Sub Area Name: Not reported
Future Document Type: Not reported
Future Due Date: Not reported
Schedule Area Name: Not reported
Schedule Sub Area Name: Not reported
Schedule Document Type: Not reported
Schedule Due Date: Not reported
Schedule Revised Date: Not reported

Count: 7 records.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/06/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/09/2023	Telephone: (415) 495-8895

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/06/2023	Source: Environmental Protection Agency

Number of Days to Update: 76

Next Scheduled EDR Contact: 08/07/2023

Data Release Frequency: Quarterly

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

Number of Days to Update: 76	Next Scheduled EDR Contact: 07/17/2023
	Data Release Frequency: Quarterly

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
SOUTH GATE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile East
Site Name:	Pemaco Maywood
Site EPA ID Number:	CAD980737092
Surficial Aquifer Flow Dir.:	SW IN THE LAKEWOOD FORMATION.
Measured Depth to Water:	29, 31, and 41 feet in perched zones identified in three separate borings.
Hydraulic Connection:	Near-surface deposits include relatively impermeable layers of clay or silt above the Lakewood formation, which extends from approximately 80 feet to 300 feet. The lower San Pedro formation aquifers are encountered at an approximate depth of 400 feet.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
---------------	-------------------------	---

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Y342	1/2 - 1 Mile West	S
1G	1/2 - 1 Mile West	S

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Surficial Soil Types: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Shallow Soil Types: fine sandy loam
 gravelly - loam
 sand
 silty clay

Deeper Soil Types: stratified
 clay loam
 silty clay loam
 gravelly - sandy loam
 coarse sand
 sand
 weathered bedrock
 very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS RADON

AREA RADON INFORMATION

State Database: CA Radon

Radon Test Results

Zipcode	Num Tests	> 4 pCi/L
90270	1	0

Federal EPA Radon Zone for LOS ANGELES County: 2

- Note: Zone 1 indoor average level > 4 pCi/L.
 : Zone 2 indoor average level >= 2 pCi/L and <= 4 pCi/L.
 : Zone 3 indoor average level < 2 pCi/L.

Federal Area Radon Information for LOS ANGELES COUNTY, CA

Number of sites tested: 63

Area	Average Activity	% <4 pCi/L	% 4-20 pCi/L	% >20 pCi/L
Living Area - 1st Floor	0.711 pCi/L	98%	2%	0%
Living Area - 2nd Floor	Not Reported	Not Reported	Not Reported	Not Reported
Basement	0.933 pCi/L	100%	0%	0%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.
