Aragon (Sunset/Everett) Properties Corp.  
1750 Glendale Boulevard, Suite 102  
Los Angeles, California 90026

Attention: Jeff Farrington

Subject: Response to City of Los Angeles Soils Report Review Letter  
Proposed Apartment Complex  
1185 West Sunset Boulevard, Los Angeles, California

References: *Report by Geotechnologies, Inc.:*  
Updated Geotechnical Engineering Investigation, dated September 6, 2023.

*City of Los Angeles Department of Building and Safety Correspondence:*  
Soils Report Review Letter, Log # 127750, dated October 17, 2023.

Dear Mr. Farrington:

This firm is in receipt of the referenced Soils Report Review Letter, dated October 17, 2023, issued by the City of Los Angeles, Department of Building and Safety. Therein, several comments are made which require input from this office. The comments are repeated below and the response immediately follows. A copy of the review letter has been enclosed for reference.

Comment 1: *The Plot Plan provided by the consultants' does not clearly depict the number of lots of the proposed development. Provide a revised Plot Plan that clearly depicted and provides the number of lots of the proposed development.*

Response: The Plot Plan has been annotated to show the individual lot labels within the site boundaries.

Comment 2: *Proposed cut slope depicted on the Plot Plan/Site Plan does not match the proposed cut slopes depicted on the geologic cross sections. Please revise the Plot Plan or sections where the proposed cut slope is depicted.*

Response: The Geologic Map shows the location of the cross sections. The cross sections have been edited to show the existing topography and the proposed cuts. The Plot Plan depicts the same details as the Geologic Map.

Comment 3: *Cross Sections B-B', E-E', F-F', and G-G' do not appear to provide the Code required setback of the proposed building from the toe of the ascending slope (1808.7.1). Provide revised Geologic Cross Sections that clearly depict the Code required setback.*

- Response: The required setback corresponds to a horizontal distance equal to one-half of the vertical height of the slope above the retaining wall, with a minimum distance of 3 feet and a maximum distance of 15 feet. The setback is created by the terrace cut at elevation 439.5 feet and is 15 feet in width. The terrace is shown on the Plot Plan, Geologic Map and cross sections.
- Comment 4: *The consultants' note on page 23 of the September 6, 2023, referenced report, "Clarification of the required setback for the existing cut shown on Cross Section E-E' shall be obtained from the Building Official" The consultants shall clarify non-conforming conditions on the Cross Section E-E'. No vertical cuts are allowed to remain unsupported.*
- Response: The toe of slope setback will be 15 feet. All vertical cuts will be supported with a retaining wall. No non-conforming cuts are proposed. Additional clarification from the building official is not required.
- Comment 5: *The consultants note on page 2 of the September 6, 2023, referenced report that "The presence of uncertified fill at the southern end of the structure will require removal and recompaction." Clarify the location of the proposed removal and recompaction on the oversized Geologic Map and Geologic Cross Sections, where appropriate. Specify the location of the excavation for the subterranean building versus the location of the removal and recompaction of the fill.*
- Response: Where fill soil is located below the subgrade elevation, the fill will be left in place. Footings will be deepened appropriately or friction piles will be used. Removal and recompaction of soils below the proposed structure will not be performed. A structural slab will be constructed if existing fill will be left in place.
- Comment 6: *The consultants' note on page 49 of the September 6, 2023, referenced report where they state that "Excavations on the order of 65 feet in vertical height will be required for the subterranean levels." Clarify the location and extent of this excavation as cross sections only depict a vertical excavation of 45 feet.*
- Response: Since the preparation of the September 6, 2023 report, the basement finish floor elevation on the north side of the site has been redesigned from 407.75 feet to 418 feet. Excavations on the order of 49 feet deep (including foundations) are anticipated along Cross Sections G-G' and E-E'. The highest vertical cut is anticipated to be 44 feet (including foundations) and will be on the north side of the site as shown on Cross Section H-H'

Comment 7: *Considering the depth of fill at the subject site varies from zero to 18.5 feet thick, justify the use of the Site Class C at the subject site.*

Response: The Puente Formation Bedrock underlies the site and consists of moderately hard siltstone and sandstone is considered to be Site Class C bearing material.

Where deep fill occurs, either deepened foundations or friction piles bearing in the bedrock will be used. All of the proposed structure foundations will bear in the Puente Formation siltstone and sandstone bedrock.

Comment 8: *Provide dewatering recommendations as required on pages 50 and 51 of the referenced report.*

Response: The referenced dewatering recommendations read as follows:

*The dewatering recommendations on pages Temporary dewatering should be installed as necessary. Temporary dewatering should consist of gravel-filled drainage trenches leading to a sump area. The collected water should be pumped to an acceptable disposal area.*

*Dewatering wells may also be considered. An experienced dewatering contractor should be consulted for dewatering system design.*

This firm recommends the use of gravel-filled trenches to capture water seepage as it enters the excavation. The location and design of the system may be determined during grading by the general contractor. Water disposal must be addressed by the contractor. As stated in the response to Comment 6, the northern basement subgrade elevation has been raised from 407 to 418 feet. Deeper dewatering wells will not be necessary.

Comment 9: *Evaluate the impacts of dewatering (temporary or permanent) on adjacent properties / structures.*

Response: Only nuisance water will be captured during construction. A formal dewatering program will not be necessary. The basement walls will be drained conventionally.

Water occurs in the alluvial soils in a layer that extends a few feet above the alluvium-bedrock contact. Water will be drawn from this layer and from the sandstone beds and from the fractures of the rock. Due to the ephemeral occurrence of water in the alluvium layer, the layer has been subjected to multiple cycles of saturation and draining in the past. Ground surface settlement is not anticipated during temporary dewatering. As water is drawn from the bedrock sandstone beds

Page 4

and fractures, the bedrock is not anticipated to settle as a result of it's long tectonic history.

Comment 10: *Permanent tiebacks are not approved. Revise recommendations accordingly.*

Response: Permanent tiebacks are not being considered for the proposed project. However, permanent cantilevered shoring may be considered.

Comment 11: *The consultants used soldier piles in slope stability analysis to improve factor of safety. Provide a diagram and a summary table identifying the design earth pressures, depth of active pressure and the depth to passive pressure for the proposed stabilization piles.*

Response: In the Geotechnical Engineering Investigation dated September 6, 2023, the slope stability analysis on Cross Section B-B' was performed as two separate analyses, an upper analysis to assess the pile stability and a lower analysis to assess the tieback stability. For this response, the upper stability analysis was rerun to identify the loads on the cantilevered shoring pile. The analysis is attached. A screen shot was taken of the support force diagram showing the resistance of the pile with depth for the pseudostatic conditions for both the curved and the block analyses. Table 1- Loads on Pile Based Relative to depth At Cross Section B-B' (Pseudostatic Analysis, Upper Slope ) is based on the screen shot, and is presented for clarity.

Geotechnologies, Inc. appreciates the opportunity to provide our services on this project. Should you have any questions please contact this office.

Respectfully submitted,  
GEOTECHNOLOGIES, INC.

Geology/Soils Report	20489	04/09/2013	Geotechnologies, Inc.

The Grading Division of the Department of Building and Safety has reviewed the referenced report dated September 6, 2023, that provides recommendations for the proposed new apartment complex, retaining walls, Mat Foundations, waterproofing, and dewatering of groundwater, as depicted on the oversized Geologic Map and Geologic Cross Sections A-A' through G-G'. The consultants report that the proposed project is seven stories in height with one to two levels of subterranean parking. Proposed retaining walls are estimated to range up to 30 feet high. Topographic relief across the site is 95 feet from highest to lowest points. Prior to development along Sunset Blvd. the westerly descending slope was up to 70 feet high and at an approximate

gradient of 4(H):1(V), afterwards, the slope was 45 feet high at an approximate gradient of 1(H):1(V). Tiebacks and shoring are proposed to support excavations.

The Grading Division of the Department of Building and Safety has reviewed the 09/10/2014 report prepared by Geotechnologies in response to 3rd party review comments presented in the 08/04/2014 letter prepared by Wilson Geosciences and Geo-Dynamics (with a cover letter dated 08/05/2014 by Hoover Tang), regarding surface fault rupture, slope stability analysis, groundwater seepage, and expansive soils.

The consultants performed numerous exploratory excavations, upwards of 30 test pits and 13 borings, from 2006, 2013, and 2016. In 2004, the previous consultant Petra excavated several test pits and hollow stem and bucket auger borings. The earth materials at the subsurface exploration locations consist of fill, from 0.5 to 18.5 feet thick, alluvium from 2 to 9 feet thick, colluvium from 3 to 6 feet thick, underlain by well bedded interbedded sandstone and siltstone Puente Formation Bedrock to a depth of 60 feet. Regional Bedrock bedding is uniform in the area of the subject site, where bedrock dips to the south and southwest ranging from 20 to 50 degrees. The regional geologic structure matches that of the subsurface exploratory excavations.

The consultants' report that groundwater was encountered in all the borings drilled along Sunset Blvd. The groundwater surface appears to descend to the south, down Sunset Blvd. In general groundwater is approximately 9 feet below the ground surface. The water is identified in the alluvium and in the joints and fractures of the bedrock. The ground water level is above the proposed basement finish floor elevation at both ends of the site. Based on the consultants review of the local Seismic Hazard Report, historic high ground water is approximately 20 feet below the ground surface. The consultants note that water seepage into the excavations will occur primarily at the alluvium-bedrock contact, along Sunset Blvd. The water will occur along a distinct zone above the contact. Some seepage may occur through fractures in the rock and along the bedding planes in deeper excavations near Sunset Blvd. .

In the consultants borings excavated in 2006, Boring B-2 (2006), seepage was encountered from 9 to 15 feet, with standing water at 14 feet. In Boring B-3 (2006), seepage was encountered from 15 to 25 feet, with standing water at 15 feet. In Boring B-4 (2006), seepage was encountered from 12 to 20 feet, with standing water at 12 feet. In Boring B-5 (2006), seepage was encountered from 9.5 to 10 feet. In Boring B-6 (2006), seepage was encountered from 11.5 to 12 feet.

In the consultants Borings excavated in 2013, Boring B-1 (2013), groundwater was encountered at 17.5 feet below the ground surface. Boring B-2(2013), groundwater was encountered at 17 feet below the ground surface. Boring B-3 (2013), groundwater was encountered at 9.5 feet below the ground surface. Boring B-4 (2013), no groundwater was encountered to the maximum depth explored of 60 feet below the ground surface.

In the consultants borings excavated in 2016, Boring B-5 (2016), seepage was encountered at 9 and 12 feet below the ground surface, with groundwater at 19 feet. In Boring B-6 (2016), seepage was encountered at 11.5 feet below the ground surface. In Boring B-7 (2016), seepage was encountered at 12 feet below the ground surface.

The subject site is not in an area zoned by the State as potentially liquefiable. This determination is based on groundwater depth records, soil type, and distance to a fault capable of producing a substantial earthquake. The proposed structure will be supported in the siltstone bedrock of the Puente Formation. The consultants note that this bedrock will not liquefy due to its moderately hard consistency and it's long tectonic history.

The consultants recommend to support the proposed structure(s) on conventional, mat, and/or drilled-pile foundations bearing on competent bedrock.

The review of the subject report dated August 28, 2023, cannot be completed at this time and will be continued upon submittal of an addendum to the report which shall include, but not be limited to, the following:

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2023 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. The Plot Plan provided by the consultants' does not clearly depict the number of lots of the proposed development. Provide a revised Plot Plan that clearly depicted and provides the number of lots of the proposed development.
2. Proposed cut slope depicted on the Plot Plan / Site Plan does not match the proposed cut slopes depicted on the geologic cross sections. Please revise the Plot Plan or sections where the proposed cut slope is depicted.
3. Cross Sections B-B', E-E', F-F', and G-G' do not appear to provide the Code required setback of the proposed building from the toe of the ascending slope (1808.7.1). Provide revised Geologic Cross Sections that clearly depict the Code required setback.
4. The consultants' note on page 23 of the September 6, 2023, referenced report, "*Clarification of the required setback for the existing cut shown on Cross Section E-E' shall be obtained from the Building Official*" The consultants shall clarify non -conforming conditions on the Cross Section E-E'. No vertical cuts are allowed to remain unsupported.
5. The consultants note on page 2 of the September 6, 2023, referenced report that "*The presence of uncertified fill at the southern end of the structure will require removal and recompaction.*" Clarify the location of the proposed removal and recompaction on the oversized Geologic Map and Geologic Cross Sections, where appropriate. Specify the location of the excavation for the subterranean building versus the location of the removal and recompaction of the fill.
6. The consultants' note on page 49 of the September 6, 2023, referenced report where they state that "*Excavations on the order of 65 feet in vertical height will be required for the subterranean levels.*" Clarify the location and extent of this excavation as cross sections only depict a vertical excavation of 45 feet.
7. Considering the depth of fill at the subject site varies from zero to 18.5 feet thick, justify the use of the Site Class C at the subject site.
8. Provide dewatering recommendations as required on pages 50 and 51 of the referenced report.
9. Evaluate the impacts of dewatering (temporary or permanent) on adjacent properties / structures.
10. Permanent tiebacks are not approved. Revise recommendations accordingly.

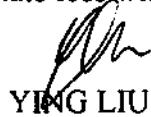

Page 4  
1185 W Sunset Blvd.

11. The consultants used soldier piles in slope stability analysis to improve factor of safety. Provide a diagram and a summary table identifying the design earth pressures, depth of active pressure and the depth to passive pressure for the proposed stabilization piles.

The project engineering geologist and soils engineer shall prepare a report containing an itemized response to the review items indicated in this letter. If clarification concerning the review letter is necessary, the report review engineer and/or geologist may be contacted. Two copies of the response report, including one unbound wet-signed original for archiving purposes, a pdf-copy of the complete report in a flash drive, and the appropriate fees will be required for submittal.

# Slide Analysis Information

## 20489 BB Updated Profile upper

### Project Summary

File Name: 20489 BB Updated Profile upper.slmd  
Slide Modeler Version: 9.012  
Project Title: File No 20489  
Analysis: Cross Section B-B', Upper Slope  
Author: RTK  
Company: Geotechnologies, inc.  
Date Created: 5/9/2017, 8:44:53 PM

### Currently Open Scenarios

Group Name	Scenario Name	Global Minimum	Compute Time
Block	Master Scenario	Bishop Simplified: 3.253420 Janbu Simplified: 3.033720	00h:00m:01.6s
	Block Static	Bishop Simplified: 1.972120 Janbu Simplified: 1.872440	00h:00m:44.973s
	Block Pstatic	Bishop Simplified: 1.104790 Janbu Simplified: 1.010440	00h:05m:25.138s
	Curved Static	Bishop Simplified: 2.151440 Janbu Simplified: 1.971860	00h:00m:19.117s
	Curved PStatic	Bishop Simplified: 1.020780 Janbu Simplified: 0.931676	00h:00m:18.613s

## General Settings

---

Units of Measurement:	Imperial Units
Time Units:	days
Permeability Units:	feet/second
Data Output:	Standard
Failure Direction:	Right to Left

# Analysis Options

## All Open Scenarios

Slices Type:	Vertical
<b>Analysis Methods Used</b>	
	Bishop simplified
	Janbu simplified
Number of slices:	50
Tolerance:	0.005
Maximum number of iterations:	74
Check malpha < 0.2:	Yes
Create Interslice boundaries at intersections with water tables and piezos:	Yes
Initial trial value of FS:	1
Steffensen Iteration:	Yes

# Groundwater Analysis

---

## All Open Scenarios

Groundwater Method:	Water Surfaces
Pore Fluid Unit Weight [lbs/ft <sup>3</sup> ]:	62.4
Use negative pore pressure cutoff:	Yes
Maximum negative pore pressure [psf]:	0
Advanced Groundwater Method:	None

# Random Numbers

---

## All Open Scenarios

Pseudo-random Seed:

10116

Random Number Generation Method:

Park and Miller v.3

# Surface Options

---

## ◆ Block - Master Scenario

Surface Type:	Non-Circular Block Search
Number of Surfaces:	8000
Multiple Groups:	Disabled
Pseudo-Random Surfaces:	Enabled
Convex Surfaces Only:	Disabled
Left Projection Angle (Start Angle) [deg]:	135
Left Projection Angle (End Angle) [deg]:	135
Right Projection Angle (Start Angle) [deg]:	45
Right Projection Angle (End Angle) [deg]:	45
Minimum Elevation:	Not Defined
Minimum Depth:	Not Defined
Minimum Area:	Not Defined
Minimum Weight:	Not Defined

## ◆ Block - Block Static

Surface Type:	Non-Circular Block Search
Number of Surfaces:	6000
Multiple Groups:	Disabled
Pseudo-Random Surfaces:	Enabled
Convex Surfaces Only:	Disabled
Left Projection Angle (Start Angle) [deg]:	135
Left Projection Angle (End Angle) [deg]:	135
Right Projection Angle (Start Angle) [deg]:	45
Right Projection Angle (End Angle) [deg]:	45
Minimum Elevation:	Not Defined
Minimum Depth:	Not Defined
Minimum Area:	Not Defined
Minimum Weight:	Not Defined

## ◆ Block - Block Pstatic

Surface Type:	Non-Circular Block Search
Number of Surfaces:	8000
Multiple Groups:	Disabled
Pseudo-Random Surfaces:	Enabled
Convex Surfaces Only:	Disabled
Left Projection Angle (Start Angle) [deg]:	135
Left Projection Angle (End Angle) [deg]:	135
Right Projection Angle (Start Angle) [deg]:	45
Right Projection Angle (End Angle) [deg]:	45
Minimum Elevation:	Not Defined
Minimum Depth:	Not Defined
Minimum Area:	Not Defined
Minimum Weight:	Not Defined

## ◆ Block - Curved Static

Surface Type:	Circular
Search Method:	Grid Search
Radius Increment:	10
Composite Surfaces:	Disabled
Reverse Curvature:	Invalid Surfaces
Minimum Elevation:	Not Defined
Minimum Depth:	Not Defined
Minimum Area:	Not Defined
Minimum Weight:	Not Defined

#### **Block - Curved PStatic**

Surface Type:	Circular
Search Method:	Grid Search
Radius Increment:	10
Composite Surfaces:	Disabled
Reverse Curvature:	Invalid Surfaces
Minimum Elevation:	Not Defined
Minimum Depth:	Not Defined
Minimum Area:	Not Defined
Minimum Weight:	Not Defined

# Seismic Loading

---

## ◆ **Block - Master Scenario**

Advanced seismic analysis:	No
Staged pseudostatic analysis:	No

## ◆ **Block - Block Static**

Advanced seismic analysis:	No
Staged pseudostatic analysis:	No

## ◆ **Block - Block Pstatic**

Advanced seismic analysis:	No
Staged pseudostatic analysis:	No
Seismic Load Coefficient (Horizontal):	0.33

## ◆ **Block - Curved Static**

Advanced seismic analysis:	No
Staged pseudostatic analysis:	No

## ◆ **Block - Curved PStatic**

Advanced seismic analysis:	No
Staged pseudostatic analysis:	No
Seismic Load Coefficient (Horizontal):	0.33

# Materials

## Puente Formation

Color	
Strength Type	Anisotropic Linear
Unit Weight [lbs/ft3]	120
Cohesion 1 [psf]	335
Cohesion 2 [psf]	530
Friction Angle 1 [deg]	20
Friction Angle 2 [deg]	25
A [deg]	2
B [deg]	5
Anisotropic Definition	Angle
Angle from 1 [deg]	-3
Anisotropic Surface	
Water Surface	Assigned per scenario
Hu Value	Automatically Calculated

## Materials In Use

Material	Block	Block Static	Block Pstatic	Curved Static	Curved PStatic
Puente Formation					

# Support

## Row 1

Color	
Support Type	RSPile
Force Application	Active
Out-of-Plane Spacing [ft]	6
Soil Displacement Type	Maximum
Soil Displacement [in]	1
Resistance Type	Lateral
Use battered pile configuration	Yes
Use values defined in RSPile	No

## Tieback

Color	
Support Type	Grouted Tieback (with friction)
Force Application	Active
Force Orientation	Parallel to Reinforcement
Bond Length [percent]	60
Out-of-Plane Spacing [ft]	6
Tensile Capacity [lb]	200000
Plate Capacity [lb]	200000
Pullout Strength Adhesion [psf]	2500
Pullout Strength Friction Angle [degrees]	30
Material Dependent	No
Shear Strength Model	Linear
Use External Loads for Strength	yes
Shear Capacity [lb]	1000
Grout Diameter [ft]	1

# Global Minimums

---

## ◆ Block - Master Scenario

### **Method: bishop simplified**

FS	3.253420
Axis Location:	219.442, 546.113
Left Slip Surface Endpoint:	207.463, 465.231
Right Slip Surface Endpoint:	276.960, 488.000
Resisting Moment:	9.69043e+06 lb-ft
Driving Moment:	2.97853e+06 lb-ft
Total Slice Area:	1133.29 ft <sup>2</sup>
Surface Horizontal Width:	69.4969 ft
Surface Average Height:	16.307 ft

### **Method: janbu simplified**

FS	3.033720
Axis Location:	219.442, 546.113
Left Slip Surface Endpoint:	207.463, 465.231
Right Slip Surface Endpoint:	276.960, 488.000
Resisting Horizontal Force:	96124.9 lb
Driving Horizontal Force:	31685.4 lb
Total Slice Area:	1133.29 ft <sup>2</sup>
Surface Horizontal Width:	69.4969 ft
Surface Average Height:	16.307 ft

## ◆ Block - Block Static

### **Method: bishop simplified**

FS	1.972120
Axis Location:	185.680, 551.550
Left Slip Surface Endpoint:	185.000, 446.540
Right Slip Surface Endpoint:	269.280, 488.000
Left Slope Intercept:	185.000 454.000
Right Slope Intercept:	269.280 488.000
Resisting Moment:	1.20449e+07 lb-ft
Driving Moment:	6.1076e+06 lb-ft
Active Support Moment:	-189617 lb-ft
Maximum Single Support Force:	1839.15 lb
Total Support Force:	1839.15 lb
Total Slice Area:	1405.69 ft <sup>2</sup>
Surface Horizontal Width:	84.2796 ft
Surface Average Height:	16.6789 ft

### **Method: janbu simplified**

FS	1.872440
Axis Location:	185.680, 551.550
Left Slip Surface Endpoint:	185.000, 446.540
Right Slip Surface Endpoint:	269.280, 488.000
Left Slope Intercept:	185.000 454.000
Right Slope Intercept:	269.280 488.000
Resisting Horizontal Force:	96081.6 lb
Driving Horizontal Force:	51313.6 lb
Active Horizontal Support Force:	-1820.51 lb
Maximum Single Support Force:	1839.15 lb
Total Support Force:	1839.15 lb
Total Slice Area:	1405.69 ft <sup>2</sup>
Surface Horizontal Width:	84.2796 ft
Surface Average Height:	16.6789 ft

## ◆ Block - Block Pstatic

### Method: bishop simplified

FS	1.104790
Axis Location:	195.334, 576.869
Left Slip Surface Endpoint:	185.000, 442.533
Right Slip Surface Endpoint:	296.603, 488.000
Left Slope Intercept:	185.000 454.000
Right Slope Intercept:	296.603 488.000
Resisting Moment:	3.02217e+07 lb-ft
Driving Moment:	2.7355e+07 lb-ft
Active Support Moment:	-178574 lb-ft
Maximum Single Support Force:	1373.48 lb
Total Support Force:	1373.48 lb
Total Slice Area:	3178.6 ft <sup>2</sup>
Surface Horizontal Width:	111.603 ft
Surface Average Height:	28.4813 ft

### Method: janbu simplified

FS	1.010440
Axis Location:	195.334, 576.869
Left Slip Surface Endpoint:	185.000, 442.533
Right Slip Surface Endpoint:	296.603, 488.000
Left Slope Intercept:	185.000 454.000
Right Slope Intercept:	296.603 488.000
Resisting Horizontal Force:	189383 lb
Driving Horizontal Force:	187426 lb
Active Horizontal Support Force:	-1293.41 lb
Maximum Single Support Force:	1373.48 lb
Total Support Force:	1373.48 lb
Total Slice Area:	3178.6 ft <sup>2</sup>
Surface Horizontal Width:	111.603 ft
Surface Average Height:	28.4813 ft

## ◆ Block - Curved Static

### Method: bishop simplified

FS	2.151440
Center:	193.085, 536.442
Radius:	93.235
Left Slip Surface Endpoint:	185.000, 443.558
Right Slip Surface Endpoint:	272.748, 488.000
Left Slope Intercept:	185.000 454.000
Right Slope Intercept:	272.748 488.000
Resisting Moment:	1.35298e+07 lb-ft
Driving Moment:	6.28872e+06 lb-ft
Active Support Moment:	-848010 lb-ft
Maximum Single Support Force:	9104.42 lb
Total Support Force:	9104.42 lb
Total Slice Area:	1714.93 ft <sup>2</sup>
Surface Horizontal Width:	87.7476 ft
Surface Average Height:	19.5438 ft

**Method: janbu simplified**

FS	1.971860
Center:	193.085, 522.587
Radius:	80.050
Left Slip Surface Endpoint:	185.000, 442.947
Right Slip Surface Endpoint:	265.277, 488.000
Left Slope Intercept:	185.000 454.000
Right Slope Intercept:	265.277 488.000
Resisting Horizontal Force:	113121 lb
Driving Horizontal Force:	57367.7 lb
Active Horizontal Support Force:	-10599 lb
Maximum Single Support Force:	10610 lb
Total Support Force:	10610 lb
Total Slice Area:	1549.81 ft <sup>2</sup>
Surface Horizontal Width:	80.2766 ft
Surface Average Height:	19.3059 ft

 **Block - Curved PStatic****Method: bishop simplified**

FS	1.020780
Center:	167.109, 591.554
Radius:	151.504
Left Slip Surface Endpoint:	185.000, 441.110
Right Slip Surface Endpoint:	277.699, 488.000
Left Slope Intercept:	185.000 454.000
Right Slope Intercept:	277.699 488.000
Resisting Moment:	1.97093e+07 lb-ft
Driving Moment:	1.9308e+07 lb-ft
Active Support Moment:	-961938 lb-ft
Maximum Single Support Force:	6349.29 lb
Total Support Force:	6349.29 lb
Total Slice Area:	1643.92 ft <sup>2</sup>
Surface Horizontal Width:	92.699 ft
Surface Average Height:	17.734 ft

**Method: janbu simplified**

<b>FS</b>	<b>0.931676</b>
Center:	192.197, 528.752
Radius:	88.422
Left Slip Surface Endpoint:	185.000, 440.623
Right Slip Surface Endpoint:	270.669, 488.000
Left Slope Intercept:	185.000 454.000
Right Slope Intercept:	270.669 488.000
Resisting Horizontal Force:	118519 lb
Driving Horizontal Force:	127211 lb
Active Horizontal Support Force:	-7440.74 lb
Maximum Single Support Force:	7458.34 lb
Total Support Force:	7458.34 lb
Total Slice Area:	1842.11 ft <sup>2</sup>
Surface Horizontal Width:	85.6687 ft
Surface Average Height:	21.5027 ft

# Valid and Invalid Surfaces

---

## ◆ Block - Master Scenario

### **Method: bishop simplified**

Number of Valid Surfaces:	7564
Number of Invalid Surfaces:	436

### Error Codes

Error Code -108 reported for 16 surfaces  
 Error Code -111 reported for 420 surfaces

### **Method: janbu simplified**

Number of Valid Surfaces:	6528
Number of Invalid Surfaces:	1472

### Error Codes

Error Code -108 reported for 15 surfaces  
 Error Code -111 reported for 1457 surfaces

## ◆ Block - Block Static

### **Method: bishop simplified**

Number of Valid Surfaces:	5718
Number of Invalid Surfaces:	284

### Error Codes

Error Code -108 reported for 10 surfaces  
 Error Code -111 reported for 274 surfaces

### **Method: janbu simplified**

Number of Valid Surfaces:	5150
Number of Invalid Surfaces:	852

### Error Codes

Error Code -108 reported for 20 surfaces  
 Error Code -111 reported for 832 surfaces

## ◆ Block - Block Pstatic

### **Method: bishop simplified**

Number of Valid Surfaces:	7913
Number of Invalid Surfaces:	87

### Error Codes

Error Code -108 reported for 2 surfaces  
 Error Code -111 reported for 85 surfaces

### **Method: janbu simplified**

Number of Valid Surfaces:	7658
Number of Invalid Surfaces:	342

### Error Codes

Error Code -108 reported for 4 surfaces  
 Error Code -111 reported for 338 surfaces

## Block - Curved Static

### Method: bishop simplified

Number of Valid Surfaces:	6711
Number of Invalid Surfaces:	6960

### Error Codes

Error Code -106 reported for 726 surfaces  
Error Code -107 reported for 3774 surfaces  
Error Code -108 reported for 8 surfaces  
Error Code -114 reported for 100 surfaces  
Error Code -1000 reported for 2352 surfaces

### Method: janbu simplified

Number of Valid Surfaces:	6713
Number of Invalid Surfaces:	6958

### Error Codes

Error Code -106 reported for 726 surfaces  
Error Code -107 reported for 3774 surfaces  
Error Code -108 reported for 6 surfaces  
Error Code -114 reported for 100 surfaces  
Error Code -1000 reported for 2352 surfaces

## Block - Curved PStatic

### Method: bishop simplified

Number of Valid Surfaces:	8019
Number of Invalid Surfaces:	5652

### Error Codes

Error Code -106 reported for 672 surfaces  
Error Code -107 reported for 2836 surfaces  
Error Code -108 reported for 2 surfaces  
Error Code -1000 reported for 2142 surfaces

### Method: janbu simplified

Number of Valid Surfaces:	8017
Number of Invalid Surfaces:	5654

### Error Codes

Error Code -106 reported for 672 surfaces  
Error Code -107 reported for 2836 surfaces  
Error Code -108 reported for 4 surfaces  
Error Code -1000 reported for 2142 surfaces

## Error Code Descriptions

The following errors were encountered during the computation:

-106 = Average slice width is less than  $0.0001 * (\text{maximum horizontal extent of soil region})$ . This limitation is imposed to avoid numerical errors which may result from too many slices, or too small a slip region.

-107 = Total driving moment or total driving force is negative. This will occur if the wrong failure direction is specified, or if high external or anchor loads are applied against the failure direction.

-108 = Total driving moment or total driving force  $< 0.1$ . This is to limit the calculation of extremely high safety factors if the driving force is very small (0.1 is an arbitrary number).

-111 = Safety factor equation did not converge

-114 = Surface with Reverse Curvature.

-1000 = No valid slip surface is generated

## CROSS SECTION B-B' SUPPORT FORCE DIAGRAM

Block, Pseudostatic Analysis  
LOADS on 24 inch diameter pile  
with 1-inch deflection  
Pile length = 35 feet  
Top of pile = elevation 454'

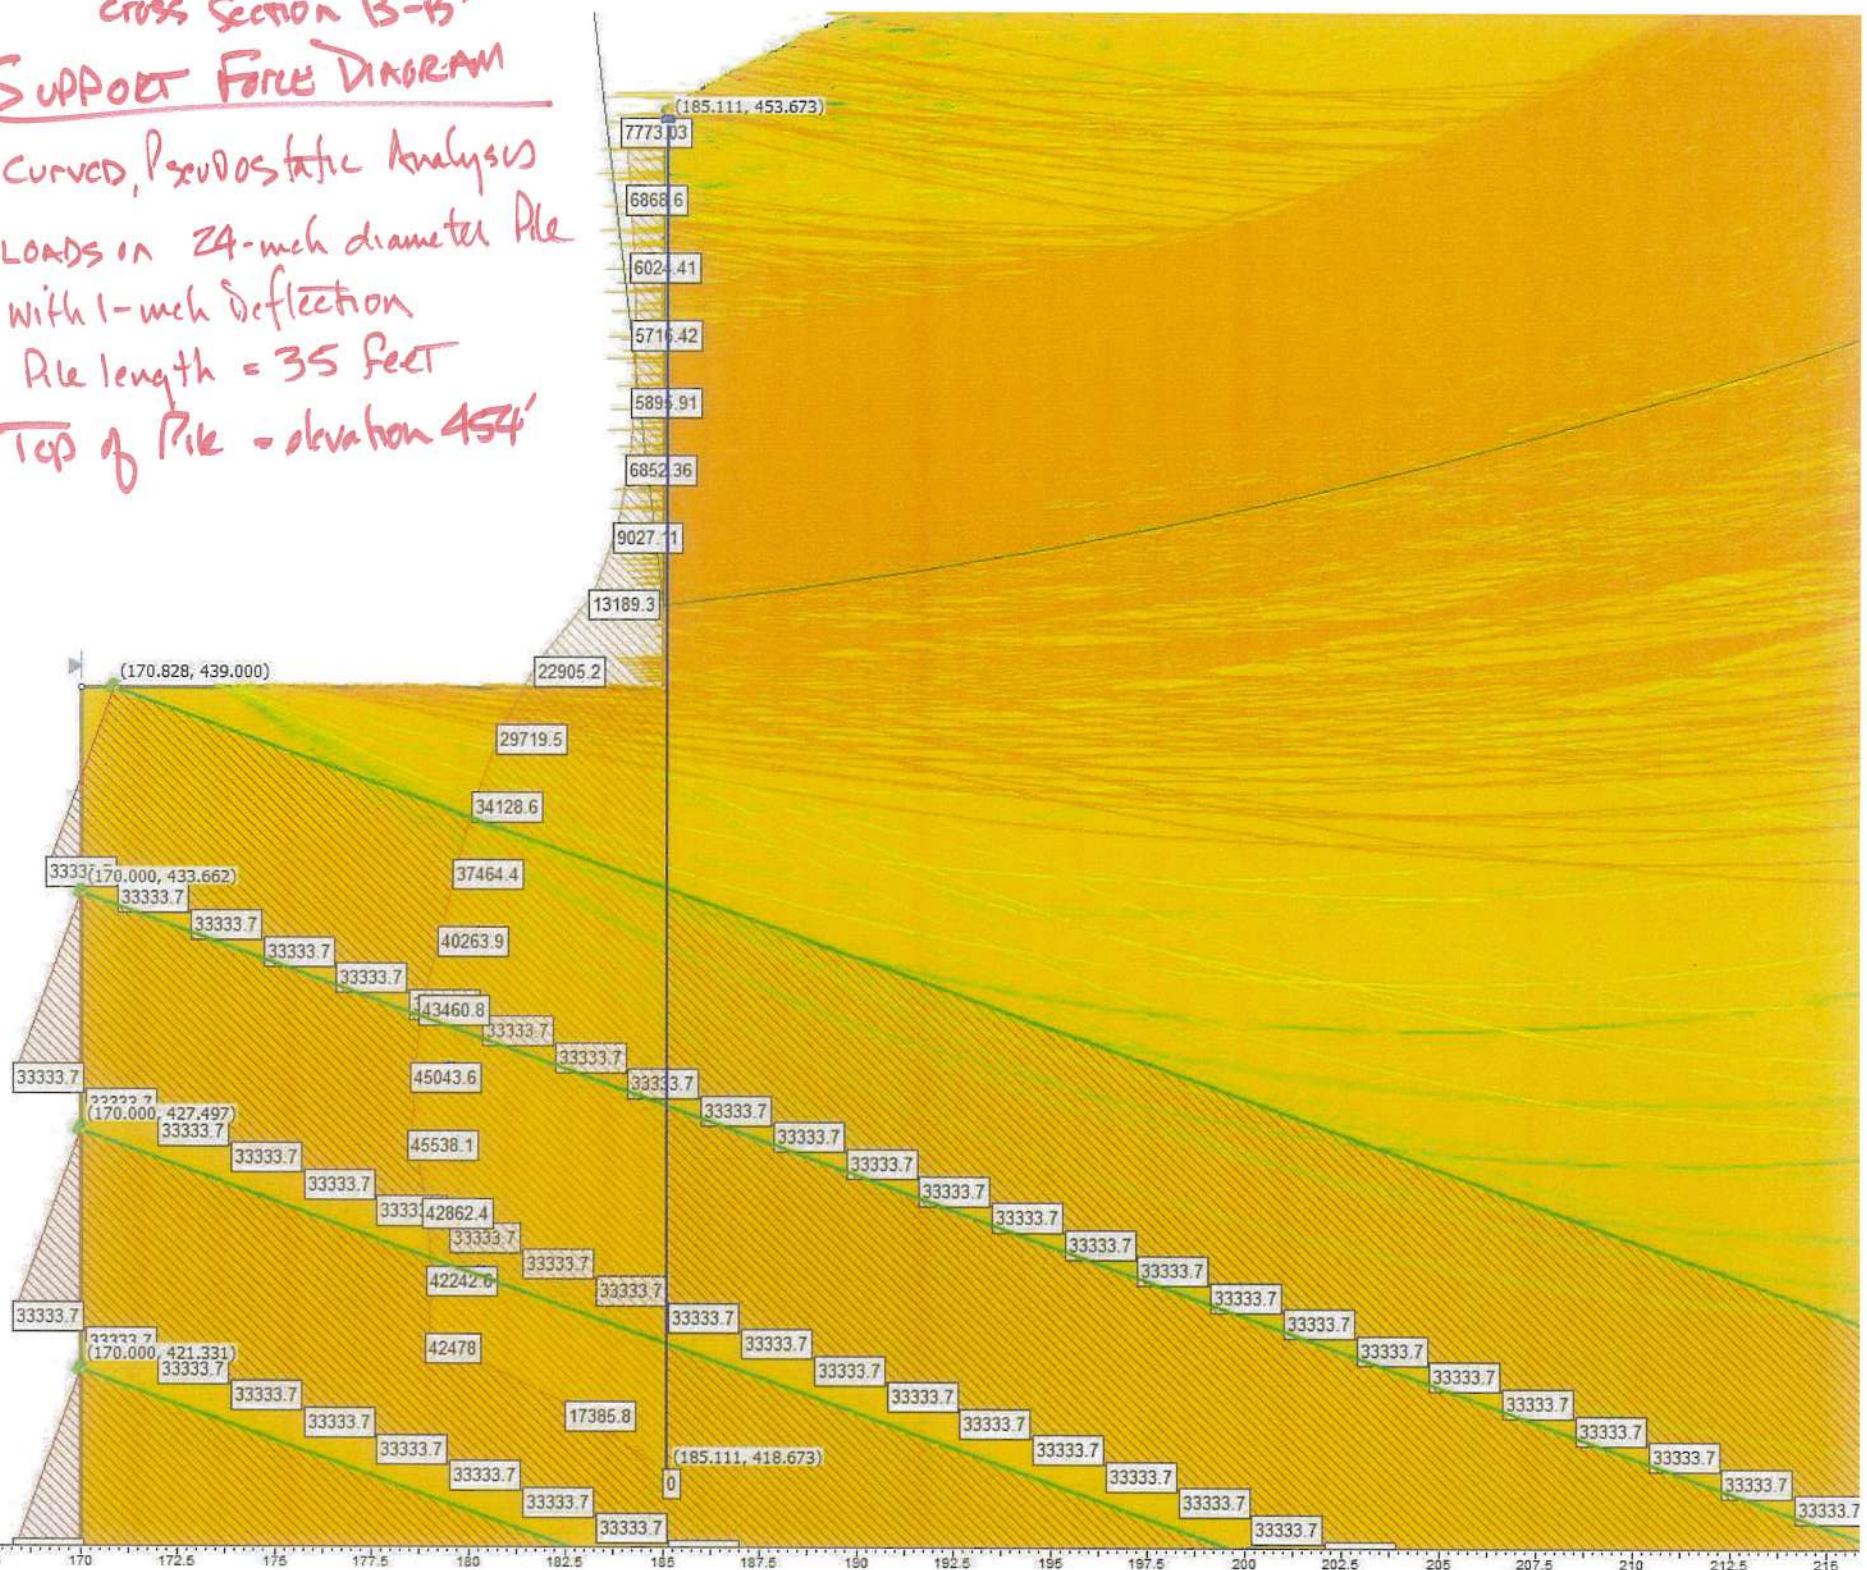

*Cross Section B-B'*  
**SUPPORT FORCE DIAGRAM**

*CURVED, Pseudostatic Analysis*

*LOADS in 24-inch diameter Pile  
with 1-inch deflection*

*Pile length = 35 feet*

*Top of Pile - elevation 454'*

File No. 20489

Client: Aragon-Sunset

**TABLE 1**  
**Loads on Pile Based Relative to depth At Cross Section B-B'**  
**(Pseudostatic Analysis, Upper Slope )**
