List of Tables

Executive Summary

This report presents the assumptions, methodologies, and findings of the Transportation Assessment (TA) conducted by Fehr & Peers to evaluate the potential transportation impacts and effects for the Sunset+Everett Project (Project) in the City of Los Angeles (City). The Project is located at 1187 Sunset Boulevard between Echo Park and Chinatown. This Project proposes a mixed-use development consisting of 286 market-rate and 41 income-restricted multi-family residential dwelling units and commercial uses. The Project would replace a collection of vacant parcels along the east side of Sunset Boulevard north of Everett Street.

This transportation assessment was conducted in line with guidance provided in the Los Angeles Department of Transportation's (LADOT) 2022 *Transportation Assessment Guidelines* (TAG) and the Project's TA Memorandum of Understanding (MOU) dated June 2023.

CEQA Assessment

The analyses included in the California Environmental Quality Act (CEQA) assessment and presented in this report are:

- **Plan, Program, Ordinance, and Policy Review:** This analysis identified whether the Project's transportation requirements and corrective actions are in conflict with the City's transportation goals and policies. Specifically, the analysis evaluated whether the Project has any potential conflicts with adopted City plans and policies.
- **Vehicle Miles Traveled Analysis:** This analysis assessed whether the Project would cause an impact on vehicle miles traveled (VMT). The analysis utilized the LADOT VMT Calculator tool (Version 1.3) to assess VMT impacts of the Project.
- **Geometric Design Feature Review:** This analysis reviews the Project's site plan for any increases in potential hazards due to the design of access to the Project. The analysis considers hazards relating to vehicles, bicycles, and pedestrians, and their safety, operational and capacity impacts.

Based on the thresholds of significance identified in the TAG and in accordance with CEQA, and as discussed in this report, the Project would have a less-than-significant impact on the environment, and no mitigation measures are required.

Non-CEQA Assessment

The analyses included in the non-CEQA assessment and presented in this report are:

- **Pedestrian, Bicycle, and Transit Assessment:** This analysis determined the Project's potential effect on pedestrian, bicycle, and transit facilities in the vicinity of the Project. The analysis included an inventory of existing facilities, as well as an evaluation utilizing criteria provided in the TAG.

- **Project Access, Safety, and Circulation Evaluation:** This evaluation analyzed Project access and intersection operations in line with the evaluation methodologies and criteria provided in the TAG. Under Senate Bill 743 and the TAG, the Project's operational evaluation is not for consideration under CEQA and is instead analyzed in accordance with the TAG. Operational evaluations such as intersection level of service (LOS) are not considered metrics for determining transportation significant impacts under CEQA.
- **Project Construction Analysis:** This analysis addressed activities associated with Project construction through the lens of temporary transportation constraints, temporary loss of access, and temporary impacts to transit.

Based on the analyses outlined above, no Project-related deficiencies or recommended actions were identified, beyond establishing a Construction Traffic Management Plan and Construction Worker Parking Plan in coordination with the City. However, outside of these topic areas, the Project proposes the following volunteered project design features as part of construction:

- **Transportation Demand Management (TDM) Measures:** Although the Project is not expected to cause any significant transportation impact or non-CEQA operational issues in accordance with the TAG, the Project proposes the following TDM measures to reduce trips, traffic, VMT, and greenhouse gas emissions (GHGs):
    - Reduced parking supply (263 spaces) compared to Los Angeles Municipal Code (LAMC) baseline requirements (621 spaces), in accordance with AB 2097.
    - Unbundled cost of parking from residential leases.
    - Promotions and marketing program (kiosk, coordinator, pamphlets, website) to inform travelers about different transportation options and the effects of their travel choices.
    - Bicycle parking per LAMC.
- **Modification of Sunset Boulevard and Marion Avenue intersection (Project driveway):** The Project proposes a full-access driveway to form the fourth leg of the Sunset Boulevard and Marion Avenue signalized intersection. This would involve the modification of traffic signal equipment, curbs, ramps, and striping at this intersection.
- **Transit Amenities Improvements:** The Project will coordinate with StreetsLA and the necessary City departments to provide a transit shelter at the bus stop located along Project frontage at the intersection of Sunset Boulevard and Marion Avenue to provide an enhanced experience for transit riders.

1. Introduction

This report documents the assumptions, methodologies, and findings of the transportation assessment to evaluate the potential transportation impacts of the proposed Sunset+Everett Project (Project). This Project proposes a mixed-use development consisting of market-rate and income-restricted multi-family residential dwelling units and commercial uses. The Project would replace a collection of vacant parcels along the east side of Sunset Boulevard (Sunset Boulevard runs north-south at the Project Site) north of Everett Street.

1.1 Project Description

The Project Site is bounded by Sunset Boulevard, Everett Street, and neighboring residential areas (Project Site). The Project is generally located at 1187 Sunset Boulevard in the Silver Lake-Echo Park-Elysian Valley Community Plan Area of the City of Los Angeles (City) and Council District 1. The Project Site currently includes:

- Vacant lots totaling 107,100 square feet (sf)

The Project proposes two adjacent seven story buildings (Building A and Building B) with the following uses:

- 286 market-rate multi-family residential dwelling units
- 41 income-restricted multi-family residential dwelling units
- 9,462 sf of high-turnover sit-down restaurant space

The Project would modify the public right-of-way by providing the fourth leg (driveway) of the Sunset Boulevard and Marion Avenue signalized intersection. The Project proposes a full-access driveway at this intersection which would involve the modification of traffic signal equipment, curbs, ramps, and striping.

Figure 1 shows the location of the Project Site in the context of the surrounding roadway network. Regional vehicular access to the Project Site is provided by the Hollywood Freeway (US-101) and the Arroyo Seco Parkway (SR-110). US-101 is accessible at ramps serving Bellevue Avenue (Glendale Boulevard and Echo Park Avenue exit), Grand Avenue, and Temple Street. SR-110 is accessible at ramps serving 3rd Street, Figueroa Street, Sunset Boulevard, and Stadium Way. Local vehicular access is provided primarily by Sunset Boulevard and other connecting streets.

Figure 2 shows the Project site plan. Vehicular access to the Project Site would be provided via three driveways that provide access to at-grade and subterranean parking. The northern driveway (Access A) would be located at the northwestern corner of the Project Site at Sunset Boulevard. It would allow left- and right-turn in and right-turn out access only. The middle driveway (Access B) would be located along the western frontage of the Project Site at Sunset Boulevard. It would also allow left- and right-turn in and right-turn out access only. The southern driveway (Access C) would be provided near the southern corner

of the Project Site, at the intersection of Sunset Boulevard and Marion Avenue. Access C provides full access to and from Marion Avenue and Sunset Boulevard.

Pedestrian access to the Project Site would be provided along the Sunset Boulevard and Everett Street frontages. Transit access is provided by the Los Angeles Metropolitan Transportation Authority (Metro) bus stops adjacent to the Project Site at Marion Avenue serving Line 4. Line 4 provides service headways of 10-15 minutes or better throughout the day, seven days a week. Transit service is further described in detail in Chapter 2.1.

1.2 Study Scope

The scope of work for this study was determined in consultation with the Los Angeles Department of Transportation (LADOT) and is in accordance with the City's CEQA transportation thresholds of significance and LADOT's *Transportation Assessment Guidelines* (TAG) adopted in July 2019, and updated in August 2022.[1] The base assumptions and technical methodologies were discussed with LADOT as part of the study approach and agreed to in a transportation assessment memorandum of understanding (MOU) dated June 2023. The MOU is included in **Appendix A** to this document.

The TAG establishes a set of guidelines, methods, and impact criteria for CEQA considerations that focus on policy conflicts, vehicle miles traveled (VMT), and geometric hazards, and freeway safety analysis. The TAG also establishes a framework for various non-CEQA analyses including a pedestrian, bicycle, and transit access assessment; a project access, safety, and circulation assessment; project construction review; and residential street cut-through analysis. Each area of analysis is described in the TAG with a discussion of screening criteria, the methodology for analysis, impact criteria, and potential mitigation or corrective action options. **Table 1** outlines the issues areas evaluated for the Project based on the screening criteria set forth in the TAG. The TAG screening analysis is available for reference in **Appendix B**. The study area boundary for this transportation assessment is a quarter-mile radius from the boundary of the Project Site for transit, pedestrian, and bike assessments, which were selected based on guidance in the TAG and as approved by LADOT through the Project MOU process.

1.3 Organization of Report

This report is divided into four chapters, including this introduction, as follows, in addition to the aforementioned executive summary:

- **Chapter 1: Introduction -** Introduces the Project description and required scope of the transportation assessment.
- **Chapter 2: Environmental Setting -** Describes the existing transportation system in the study area, including an overview of local and regional auto, pedestrian, bicycle, and transit access to the Project. Also describes cumulative conditions within the study area, including proposed transportation system improvements and related development projects.
- **Chapter 3: CEQA Transportation Assessment -** Includes required CEQA analyses, including a plans, programs, ordinances, and policies review; VMT analysis; and geometric hazards evaluation.
- **Chapter 4: Non-CEQA Transportation Assessment -** Summarizes the required non-CEQA transportation analyses, including a pedestrian, bicycle, and transit access assessment; access, safety, and circulation evaluation; a construction analysis, and a residential street cut-through analysis.

[1] City of Los Angeles Department of Transportation, *Transportation Assessment Guidelines (TAG)*, August 2022.

Table 1: TAG Screening Criteria Issue Areas

TAG Issue Area	Analysis Required?
CEQA Analyses:	
Conflicts with Plans, Programs, Ordinances, and Policies	Yes
Causing Substantial Additional Vehicle Miles Traveled	Yes
Substantially Inducing Additional Automobile Travel	No
Geometric Design Features	Yes
Freeway Safety Analysis	No
Non-CEQA Analyses:	
Pedestrian, Bicycle, and Transit Access	Yes
Project Access, Safety, and Circulation	Yes
Project Construction	Yes
Residential Street Cut-Through	No

2. Environmental Setting

The Project Site is located at the following addresses: 1185, 1187, 1193, 1195, 1197, 1201, 1205, 1207, 1211, 1215, 1221, 1225, 1229, 1233, 1239, 1243, 1245, 1247 W. Sunset Boulevard and 917 N. Everett Street. It is currently a collection of vacant lots and is bounded by Sunset Boulevard to the west, residential development to the north and east, and the Sunset Boulevard and Everett Street intersection to the south. **Figure 1** shows the Project Site location.

2.1 Existing Conditions

The Project Site is situated in the Silver Lake-Echo Park-Elysian Valley Community Plan Area of the City, an urbanized and mixed-use area with a variety of population, employment, and retail services. The Project Site is located within the boundaries of a Transit Priority Area (TPA) and High Quality Transit Area (HQTA) as defined California Public Resources Code §21099(a)(7), SCAG, and City Zoning Information File (ZI) 2452.

The Project Site currently consists of the following:

- **1187 Sunset Boulevard:** A collection of vacant lots totaling 107,100 sf

These vacant lots formerly contained automotive service and retail uses that were demolished prior to this study. Land uses located directly adjacent to the Project Site include a variety of single-family and multi-family residential uses to the north and east. Other land uses in the area include residential and commercial uses and Dodger Stadium. The nearest Metro rail stations are the Bunker Hill and Chinatown stations, approximately 0.9 miles to the south and east, respectively.

Vehicular access to the Project Site's vacant parcels is provided via 13 driveways along Sunset Boulevard and one driveway on Everett Street. Pedestrian access to the Project Site is located along Sunset Boulevard and Everett Street.

Existing Street System

Regional access to the Project Site is provided primarily by the US-101 and SR-110 freeways. US-101 is accessible at ramps serving Bellevue Avenue, Grand Avenue, and Temple Street. SR-110 is accessible at ramps serving 3rd Street, Figueroa Street, Sunset Boulevard, and Stadium Way. Local access to the Project Site is provided by Sunset Boulevard and other connecting streets. **Table 2** and **Table 3** provide an overview of the regional and local roadways, respectively, serving the Project Site. The street descriptions include the designation of the roadway under the City's General Plan Mobility Element, *Mobility Plan 2035* approved by the Los Angeles City Council in August 2015 and amended in September 2016. In addition, the *Mobility Plan 2035* identifies networks proposed to prioritize bicycle, pedestrian, transit, and vehicle infrastructure improvements. These networks are defined as the following:

- **The Neighborhood-Enhanced Network** (NEN) is a selection of streets that provide comfortable and safe routes for localized travel of slower-moving modes such as walking, bicycling, or other slow speed motorized means of travel.
- **The Transit-Enhanced Network** (TEN) is the network of arterial streets prioritized to improve existing and future bus service for transit riders.
- **The Bicycle-Enhanced Network** (BEN) is a network of streets to receive treatments that prioritize bicyclists. Tier 1 Protected Bicycle Lanes are bicycle facilities that are separated from vehicular traffic. Tier 2 and Tier 3 Bicycle Lanes are facilities on roadways with striped separation. Tier 2 Bicycle Lanes are those more likely to be built by 2035.
- **The Vehicle-Enhanced Network** (VEN) identifies streets that prioritize vehicular movement and offer safe, consistent travel speeds and reliable travel times.
- **The Pedestrian-Enhanced Districts** (PEDs) identify where pedestrian improvements on arterial streets could be prioritized to provide better walking connections to and from the major destinations within communities.

Table 2: Regional Access to the Project Site[1]

Name	Direction	Posted Speed (mph)	Total Number of Lanes	Nearby Access Points
Route 101	Northwest-Southeast	55	10	Bellevue Ave/Belmont Ave, Grand Ave, Temple St
State Route 110	Northeast-Southwest	55	6	3rd St, Figueroa St, Sunset Blvd, Stadium Way

Existing Public Transit Service

The Project Site is located within a TPA and a Tier 2 Transit Oriented Communities (TOC) area[2] based on the City's Zoning Information and Map Access System (ZIMAS) and other City map data, accessed June 2023. **Figure 3** shows nearby transit facilities in the context of the Project Site. **Table 4** summarizes transit lines, frequencies, and ridership in the Project Site vicinity. Bus service is primarily provided via Line 4, which stops in front of the Project Site at Sunset Boulevard and Marion Avenue. See **Appendix C** for detailed schedule information for nearby transit services.

Existing Pedestrian and Bicycle Facilities

Pedestrian Facilities

Sunset Boulevard, Beaudry Avenue, Vin Scully Avenue, Stadium Way, Temple Street, and Figueroa Street, major roadways in the vicinity of the Project Site, are part of the City's Pedestrian Enhanced Districts. The study area generally has a mature network of pedestrian facilities (summarized in **Table 5**, **Table 6,** and **Figure 4**) including sidewalks and pedestrian safety features, however some intersection curb ramps within the study area are missing ADA-compliant tactile warning strips. Marion Avenue, Kensington Road, Edgeware Road south of Bellevue Avenue, and Beaudry Avenue between Sunset Boulevard and College Street are included in the City's Neighborhood Enhanced Network.

Bicycle Facilities

Figure 5 shows existing bicycle facilities in the Project area. Bicycle facilities in the study area consist of the Class II bicycle lanes on Sunset Boulevard north of Vin Scully Avenue, Class II and Class III bicycle lanes/routes on Bellevue Avenue west of Edgeware Road, and Class III bicycle routes on Stadium Way south of Boylston Street.

High-Injury Network

The City's High-Injury Network (HIN) is comprised of streets with the highest concentration of traffic collisions that result in severe injuries and deaths, with an emphasis on those involving people walking and bicycling. As shown in **Figure 4**, the Project study area has two streets that have been identified as part of the HIN: Sunset Boulevard and Temple Boulevard.

[2] The City's TOC Incentive Program includes four tiers of TOC areas based on a site's distance from a "Major Transit Stop." Tier 2 indicates the site has access to two or more intersecting frequent bus services. https://www.arcgis.com/apps/mapviewer/index.html?layers=47618827cb57401a8cb5570df12b3605&layerId=0

Table 4: Transit Lines and Ridership within a Half-Mile of the Project Site

Line	Description	Peak Hour Headway	FY 2022 Annual Ridership[1]
LA Metro			
4	Downtown LA - Santa Monica *via Santa Monica Blvd & Sunset Blvd*	7-8 minutes	6,156,307
10/48	Downtown LA - West Hollywood *via Temple St & Melrose Ave*	10-16 minutes	1,976,400
55	Downtown LA - Willowbrook/Rosa Parks Stations *via Grand Ave, Adams Blvd, & Compton Ave*	12-15 minutes	1,969,348
60	Downtown LA - Artesia Station *via Santa Fe Ave & Long Beach Blvd*	5-8 minutes	4,211,189
92	Downtown LA - Sylmar *via Glendale Blvd, Brand Bl, & Glenoaks Blvd*	17-20 minutes	1,314,084
LADOT DASH			
Pico Union/Echo Park	Elysian Heights - University Park *via Echo Park, Angelino Heights, Historic Filipinotown, Westlake, & Pico Union*	14 minutes	N/A

Existing & Proposed Bicycle Facilities

2.2 Cumulative Conditions

This section details the planned transportation improvements and proposed land use developments near the Project that are planned, underway, or anticipated to be completed by the buildout date of the Project.

Transportation Infrastructure Projects

There are several transportation projects planned and/or proposed within and near the Project:

- ***LA Aerial Rapid Transit:*** This project would provide a direct connection between Union Station and Dodger Stadium via an aerial gondola system. This transit system would generally travel along Alameda Street, Spring Street, and Bishop Road, traveling over the Los Angeles State Historic Park and SR-110. The proposed project's Draft EIR was released in October 2022.
- ***Sunset4All:*** This project would install protected bicycle lanes and other complete streets elements along Sunset Boulevard between Fountain Avenue and Douglas Street, and Santa Monica Boulevard between Sunset Boulevard and Virgil Avenue. There is currently no timeline for construction.
- ***Mobility Plan 2035*****:** This document identifies corridors proposed to receive improved bicycle, pedestrian, and vehicle infrastructure improvements. Proposed bicycle facilities are broken down into three tiers, as described in Chapter 3.1, and are proposed on the following streets:
    - **Tier 1 Bicycle Lanes** are planned on Sunset Boulevard.
    - **Tier 2 Bicycle Lanes** are planned on Vin Scully Avenue, Stadium Way, Temple Street, and Beaudry Avenue east of Sunset Boulevard.
    - **Moderate Plus Transit Enhanced Streets** are planned on Sunset Boulevard.

Figure 5 shows the planned bicycle improvements in the study area per the *Mobility Plan 203*5.

Related Projects

Related projects are developments that are planned, underway, or anticipated to be completed in the study area of the Project Site prior to the buildout date of the Project. The list of related projects within a half-mile radius of the Project was prepared based on data from LADOT[3] and the known development landscape of the area. **Table 7** includes the full list of related projects and their corresponding land use, size, and trip generation assumed to be in place by Year 2027. The location of each related project is illustrated in **Figure 6**.

[3] According to TAG, a half-mile radius from the Project Site was used to determine the related projects list in this TA instead of a quarter-mile radius from the farthest outlying study intersection since the half-mile radius is the farther of the two radius measurements.

Table 7: Related Projects

ID	Project Title	Project Address	Land Use	Size	Trip Generation Estimates [a]					
					AM Peak Hour			PM Peak Hour		
					In	Out	Total	In	Out	Total
1	Firmin Court Residential	418 N Firmin St	Apartments	64 du	6	9	15	6	4	10
2	Barlow Skilled Nursing Facility	2000 N Stadium Way	Medical	80.545 ksf	19	7	26	11	22	33
3	Evertt St (2016) Project	1013 N Everett St	Apartments	49 du	5	20	25	19	10	29

3. CEQA Transportation Assessment

3.1 Plans, Programs, Ordinances, and Policies Review

A review was conducted to determine whether the Project conflicts with a transportation-related City plan, program, ordinance, or policy that was adopted to protect the environment.

> **Threshold T-1:** Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities?

Under CEQA, a project is considered to not conflict with an applicable plan if it is consistent with the overall intent of the plan and would not preclude the attainment of its primary goals. A project does not need to be in perfect conformity with each and every policy. Any conflict with an applicable policy, plan, or regulation is only a significant impact under CEQA if the policy, plan, or regulation was adopted for the purpose of avoiding or mitigating an environmental effect and if the conflict itself would result in a direct physical impact on the environment. This evaluation was conducted in alignment with CEQA guidelines and the TAG, and includes a review of the following City documents:

- ***City of Los Angeles General Plan*** is a comprehensive policy document that informs future land use decisions. It is comprised of several elements that provide guidance for how land is used and how the City allocates its resources.
    - The *Mobility Plan 2035 (2016)*, adopted under the City's General Plan, is the Transportation Element of the General Plan. It incorporates "complete streets" principles and lays the policy foundation for the operation and design of streets and public right-of-way.
    - *The Plan for a Healthy Los Angeles (2015)* is an element of the City's General Plan and lays the foundation to create healthier communities for all Angelenos. The Plan "provides a high-level policy vision, along with measurable objectives and implementation programs to elevate health and environmental justice as a priority for the City's future growth and development."
- ***Citywide Design Guidelines (2019)*** establishes ten guidelines to carry out the common design objectives laid out in the City's General Plan Framework Element and 35 Community Plans. The guidelines are organized around one of three design approaches: Pedestrian-First Design, 360 Degree Design, and Climate-Adopted Design.
- ***Silver Lake-Echo Park-Elysian Valley Community Plan (2004)*** [4] is one of 35 Community Plans in the City that establish policies and programs that inform the framework for local land use, circulation, and service systems within the selected community plan area. The Silver Lake-Echo Park-Elysian Valley Community Plan highlights the broad contexts across the community area, which is mostly fairly dense, hillside neighborhoods with commercial corridors centered primarily

[4] An update to the Silver Lake-Echo Park-Elysian Valley Community Plan is expected but has not been adopted. The 2004 plan is currently in effect and forms the basis for this review of conflicts relating to the transportation system.

along Sunset Boulevard and Glendale Boulevard, with a number of smaller commercial areas. The community plan includes several transportation objectives, including a continuous system of bicycle and pedestrian trails along the Los Angeles River, Pedestrian Oriented Districts, traffic calming to alleviate impacts of commuter traffic, and increased bus service to connect hillside neighborhoods to commercial areas and Metro rail stations, and residential development in areas with access to employment and retail destinations.

- ***Municipal Code of the City of Los Angeles*** codifies the regulatory and penal ordinances of the City. The current Sixth Edition assists City officials, departments, and other governmental agencies in their functions, and "will serve the people as the official source of information regarding the regulations enacted by the City of Los Angeles for the preservation of the public peace, health and safety."[5]
- ***Vision Zero Los Angeles (2017)***[6] is a plan that strives to eliminate traffic-related deaths in Los Angeles by 2025 through multiple strategies such as modifying streets to better serve vulnerable road users.

Conflicts with Relevant Plans, Programs, Ordinances, and Policies

Table 8 provides a discussion of the Project's potential conflicts with the plans described above. **Appendix D** provides a detailed evaluation of the Project's potential conflicts regarding specific questions presented in the TAG. As can be seen in Table 8 and in the detailed evaluation in **Appendix D**, the Project does not conflict with the various regional and local plans, programs, ordinances, and policies related to transportation.

[5] *City of Los Angeles Municipal Code*, 6th Edition, effective September 2002.
[6] *Vision Zero Los Angeles 2015-2025 Action Plan*, effective January 2017.

Table 8: Conflict with Plans, Programs, Ordinances, and Policies Review

Plan, Program, Ordinance, or Policy	Conflict Review
City of Los Angeles Mobility Plan 2035	The Project's proposed land use and design features including site access; pedestrian, bicycle, and transit accessibility; and loading areas, would not conflict with the policies of the *Mobility Plan 2035* . Sunset Boulevard at the western boundary of the Project Site is part of the Bicycle Enhanced Network, Pedestrian Enhanced Districts, and Transit Enhanced Network. Vin Scully Avenue is part of the Bicycle Enhanced Network and Pedestrian Enhanced Districts. Marion Avenue is part of the Neighborhood Enhanced Network. Beaudry Avenue west of Sunset Boulevard is part of the Bicycle Enhanced Network and Pedestrian Enhanced Districts. The Project would not conflict with the implementation of future projects in the public right-of-way on these networks.
City of Los Angeles Transportation Demand Management (TDM) Program	The Project is not required to comply with the City's TDM Program because its commercial use component does not exceed 25,000 square feet.
Citywide Design Guidelines	The Project would not conflict with the circulation components of the *Citywide Design Guidelines* . The guidelines call for incorporating vehicular access such that it does not discourage and/or inhibit the pedestrian experience and promoting a safe, comfortable, and accessible pedestrian experience.
Silver Lake-Echo Park-Elysian Valley Community Plan (2004)	The Project does not conflict with the transportation components of the *Silver Lake-Echo Park-Elysian Valley Community Plan* . The Project's prioritization of pedestrian and bicycle access, along with unbundled parking, coincide with the City's goals of increasing the ease by which transit riders, cyclists, and pedestrians can access the site. Additionally, the Project concentrates new residential development on a major transportation corridor, an important objective of the Community Plan.
Municipal Code of the City of Los Angeles	The Project and its features do not conflict with the City's Municipal Code. The Project would be in accordance with code requirements such as providing bicycle parking and providing adequate sight distance. In addition, at least 30 percent of the Project's parking spaces would be capable of supporting future electric vehicle supply equipment, and 10 percent of spaces would have EV charging.
Plan for a Healthy Los Angeles	The Project does not conflict with the *Plan for a Healthy Los Angeles* . It strives to reduce vehicle miles traveled and greenhouse gas emissions by providing mixed use development with a variety of land uses in a neighborhood with high walkability and transit access.
Vision Zero Los Angeles	The Project does not conflict with the goals and objectives set forth in *Vision Zero Los Angeles* and would not conflict with the implementation of future Vision Zero projects in the public right-of-way. The western boundary of the Project is Sunset Boulevard, which is identified as part of the HIN. The Project's proposed auto access is on Sunset Boulevard and would reduce the number of existing curb cuts along Project frontage to three. Additionally, vehicles exiting the Project via Driveways A and B onto Sunset Boulevard are limit to right-turns only to reduce the likelihood of conflict with northbound vehicles on Sunset Boulevard. The Project is not located in a Safe Routes to School program area.

Cumulative Analysis

The nearest related project to the Project Site is a 49-unit residential development located at 1013 Everett Street approximately 0.1-mile northeast of the Project Site. A cumulative impact could occur if the Project as well as related projects located on the same block were to preclude the City's ability to implement relevant plans, programs, ordinances, and policies. These projects in combination would have a less-than-significant cumulative impact. Accordingly, the Project would not contribute to significant cumulative impacts in conflict with transportation policies and standards and thus, would not conflict with City transportation plans, programs, ordinances, and policies.

Conclusion and Recommended Actions

The Project features, location, and design generally support multimodal transportation options and would not conflict with City plans, policies, ordinances, and programs put in place to protect the environment. Thus, the Project would result in a less-than-significant impact, and therefore there are no mitigations required.

3.2 Vehicle Miles Traveled Analysis

In accordance with the Governor's Office of Planning and Research (OPR) CEQA guidance[7] as well as *City of Los Angeles Mobility Plan 2035* goals and objectives, the City has set the following significance criteria for transportation impacts based on vehicle miles traveled for land use projects and plans.

> **Threshold T-2.1:** For a land use project, would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)(1)? The intent of this threshold is to assess whether a land use project or plan causes substantial vehicle miles traveled.

The Project's impact on vehicle miles traveled was assessed utilizing LADOT's VMT Calculator Version 1.3. The VMT Calculator considers a project's land uses, proposed transportation demand management strategies, and location within the City to estimate the project's impact on vehicle miles traveled, assessed against the City's established impact criteria.

Impact Criteria

The TAG establishes the City's VMT impact criteria, which states that a land use project may have a potential significant impact if the project meets one or more of the following criteria:

- For residential projects, the project would generate daily household VMT per capita exceeding 15% below the existing average household VMT per capita for the Area Planning Commission (APC) area in which the project is located. This criterion was used for the residential component of the Project.
- For office projects, the project would generate daily work VMT per employee exceeding 15% below the existing average work VMT per employee for the APC in which the project is located. The Project does not have an office component.
- For regional serving projects including retail projects, entertainment projects, and/or event centers, the project would result in a net increase in VMT. Retail projects less than 50,000 square feet in size are considered local serving. New retails uses greater than 50,000 square feet may also be considered local serving, if an applicant provides documentation that most of the vehicle trips would be originating from the project area. This criterion was used for the commercial/retail component of the Project.

For mixed-use projects, the project VMT impact should be considered significant if, after taking credit for internal capture, the project exceeds the impact criteria for one or more of a project's particular land uses, with each land use evaluated separately. **Table 9** outlines the City's VMT impact criteria based on these guidelines. The Project is in the East Los Angeles APC, which has a daily work VMT per employee significance threshold of **12.7** and daily household VMT per capita significance threshold of **7.2**.

[7] *Technical Advisory on Evaluation Transportation Impacts in CEQA*, December 2018.

Table 9: City of Los Angeles VMT Impact Criteria (15% Below APC Average)

Area Planning Commission	Daily Household VMT per Capita	Daily Work VMT per Employee
Central	6.0	7.6
East Los Angeles	**7.2**	**12.7**
Harbor	9.2	12.3
North Valley	9.2	15.0
South Los Angeles	6.0	11.6
South Valley	9.4	11.6
West Los Angeles	7.4	11.1

Source: LADOT *Transportation Assessment Guidelines* , 2022.

Per the TAG, a project could have a significant cumulative impact on VMT if the project has both a significant project-level impact as determined above and conflicts with the Southern California Association of Governments'[8] (SCAG) Regional Transportation Plan/Sustainable Communities Strategy[9] (2020-2045 RTP/SCS) in terms of development location, density, and intensity.

Impact Analysis

The Project's land uses are outlined in **Table 10**. In alignment with TAG guidance for mixed-use projects, both the commercial/retail and residential land uses are subject to this threshold. Since the Project's commercial component is well below the 50,000-square feet threshold, it is presumed to be local-serving and to have a less-than-significant impact on VMT. The estimated daily household VMT per capita for the Project would be 5.3 and is presented in **Table 11**. The Project's estimated total daily VMT would be 11,632 and is shown in **Appendix E.**

The Project's estimated daily household VMT per capita is below the threshold of significance for the East Los Angeles APC; therefore, the Project would not have a significant VMT impact.

Cumulative Impacts

Consistent with the TAG, the Project was reviewed for consistency with the 2020-2045 RTP/SCS. The 2020-2045 RTP/SCS is a regional plan that demonstrates compliance with air quality conformity requires and greenhouse gas (GHG) reduction targets. Projects and land use plans that fall under the City's efficiency-based impact thresholds for VMT are already shown to align with the long-term VMT and GHG reduction goals of the 2020-2045 RTP/SCS. Given the Project's location in a dense, urban area and proximity to quality public transit, the Project would not conflict with the applicable goals and objectives of the 2020-2045 RTP/SCS. The Project proposes adding housing units in Los Angeles, which has a shortage of available housing. Since the Project would not have a significant project-level VMT impact, therefore, the Project's cumulative impact on VMT would be less than significant.

Conclusion and Recommended Actions

The analysis in this report demonstrates that the Project would result in a less-than-significant impact on VMT and no mitigation measures would be required. This conclusion is based on research and substantial evidence that infill developments with this level of transit proximity and accessibility tend to generate fewer overall vehicle trips, and those vehicle trips tend to be shorter than if the Project were built in a less dense area with less access to multimodal travel options, resulting in the Project's VMT being below the thresholds of significance. **Appendix E** contains additional information about the inputs and supporting documentation for the VMT analysis.

---

[8] SCAG is the nation's largest metropolitan planning organization. Its primary purpose is to research and produce plans for transportation, growth management, hazardous waste management, and air quality.

[9] The RTP/SCS is a regional plan that demonstrates compliance with air quality conformity requirements and emissions reductions targets. It provides a comprehensive look at future transportation needs and maps out how the region will integrate transportation and land use. The latest update is *Connect SoCal* (2020-2045 RTP/SCS) adopted by the SCAG Regional Council in 2020.

Table 10: Project Land Uses

Proposed Land Use	Proposed Land Use Size
Market Rate Multi-Family Housing	286 DU
Income-Restricted Housing	41 DU

Table 11: Project Household VMT per Capita

Proposed Project Daily Household VMT per Capita	Threshold of Significance[2]	Significant VMT Impact?
5.3	7.2	No

Notes

1. Project Daily Household VMT per Capita estimated using the VMT Calculator Version 1.3.

2. Threshold of significance for residential land use projects in the East Los Angeles APC.

3.3 Geometric Design Feature Review

The Project's preliminary site plan was reviewed for potential geometric design hazards due to the configuration of Project automobile, bicycle, and pedestrian access points. The TAG lists the following threshold of significance for proposed land use projects:

> **Threshold T-3:** Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Impact Analysis

Automobile Access

There are currently 13 driveways serving the Project Site along Sunset Boulevard. The Project proposes reducing vehicular access points to three driveways (Access A, B, and C) on Sunset Boulevard. The other existing vehicle access points to the Project site would be closed. Below is a description of the Project's proposed driveways:

- **Access A:** The Project proposes a left- and right-in/right-out only driveway off of Sunset Boulevard at the northern end of the Site. Outbound left-turns from this driveway would not be permitted.
- **Access B:** The Project proposes a left- and right-in/right-out only driveway off of Sunset Boulevard in the middle of the Site. Outbound left-turns from this driveway would not be permitted.
- **Access C:** The Project proposes a full-access driveway that would form the fourth leg (west facing) of the signalized intersection of Sunset Boulevard and Marion Avenue.

Each driveway would serve separate parking structures. The Project's vehicular driveways would be designed to the City standards and would provide adequate sight distance. They would not require the removal or relocation of existing public transit stops. Sunset Boulevard along the Project Site is part of the designated HIN, however, the number of Project Site driveways along Sunset Boulevard would be reduced from 13 to three. The Project would not increase hazards by potentially precluding the ability for the City to implement safety improvements along HIN roadways.

Pedestrian Access

Pedestrian access to the Project would be provided via street-facing entrances along Sunset Boulevard with a series of internal pedestrian walkways throughout the Project Site. This would allow easy access to the public right-of-way and other destinations. The Project's pedestrian access locations would be designed to the City standards and would not increase hazards by introducing entrances that would cause visibility issues or conflicts between vehicles and pedestrians.

Bicycle and Micromobility Access

Residents, patrons, and employees arriving to the Project Site by bicycle, scooter, or other non-motorized forms of transportation would have the same access opportunities to the Project Site via the pedestrian entrances. 21 short-term bicycle parking spaces would be provided in the public right-of-way. 162 long-term bicycle parking spaces would also be provided for building residents via elevator connections on-site.

Therefore, the Project would not increase hazards by introducing bicyclist entrances that would cause visibility issues or conflicts between vehicles and bicyclists.

Conclusion and Recommended Actions

As described above, the Project's design does not include hazardous geometric design features. The roadways adjacent to the Project Site are part of the urban roadway network and contain no sharp curves and the development of the Project would not result in roadway alterations such that hazards would be introduced adjacent to the Project Site. In addition, the proposed residential use would not conflict with other properties near the Project Site, and the proposed residential and commercial uses would not introduce hazards due to incompatible uses. Thus, the Project would result in a less-than-significant impact to hazards due to a geometric design feature or incompatible uses. **Appendix B** contains more detailed responses to the TAG evaluation questions that support this conclusion.

3.4 Freeway Safety Analysis

The TAG provides guidance on freeway safety analysis for land use projects that are required to prepare a transportation assessment.[10] The freeway safety analysis evaluates a proposed project's potential to cause or lengthen a forecasted off-ramp queue on the freeway mainline that could lead to a potential safety impact due to speed differentials between vehicles exiting the freeway off-ramps and vehicles traveling on the freeway mainline.

The TAG guidance on freeway safety analysis requires analysis of freeway off-ramps where a proposed project is projected to add 25 or more trips in either the morning or afternoon peak hour to be studied for potential queuing impacts. Chapter 4 of this TA provides a comprehensive Project trip generation and distribution analysis. Because the proposed project is not projected to add 25 or more peak hour trips at any freeway off-ramps, a freeway ramp analysis is not required. The Project is estimated to generate no more than 53 new inbound trips during either peak hour, of which less than 10% would be expected to utilize any single freeway off-ramp.

Therefore, the Project is not projected to cause a significant safety impact and no further analysis is required.

[10] LADOT *TAG*, August 2022

4. Non-CEQA Transportation Assessment

The purpose of the non-CEQA transportation assessment required in the TAG is to promote orderly development, evaluate and address transportation-system deficiencies, and promote public safety and the general welfare by ensuring that development projects are properly related to their sites, surrounding properties, and traffic circulation.

4.1 Pedestrian, Bicycle, and Transit Access

The pedestrian, bicycle, and transit facilities assessment is intended to determine a project's potential effects on pedestrian, bicycle, and transit facilities in the vicinity of a proposed project based on an evaluation of physical or demand-based considerations that would affect the experience of people utilizing the multimodal transportation network. **Figure 7**, **Figure 4**, **Table 5**, and **Table 6** provide a map of pedestrian destinations and inventory of the pedestrian facilities (i.e., crosswalks and curb ramps) within 1,320 feet of the edge of the Project Site.

As shown in **Table 6**, curb ramps with tactile warnings and/or marked crosswalks are not present at some of the nearby unsignalized intersections, particularly in residential areas west of the Project. At signalized intersections, traffic signals are either programmed to provide walk phases during every signal cycle or push buttons are provided. Curb ramps are missing at the intersection of Sunset Boulevard and Marion Avenue.

The following checklist from the TAG was reviewed to evaluate whether direct or indirect Project effects would lead to removal, modification, or degradation of pedestrian, bicycle, or transit facilities:

- Removal or degradation of existing sidewalks, crosswalks, pedestrian refuge islands, and/or curb extensions/bulbouts.
    - No, the Project would not remove or degrade existing pedestrian facilities because the Project would retain the existing sidewalk widths adjacent to the Project Site consistent with the right-of-way width requirements in *Mobility Plan 203*5. The Project would remove most of the existing curb cut driveways along the Project Site, which would improve the pedestrian experience.
- Removal or degradation of existing bikeways and/or supporting facilities (e.g., bikeshare stations, on-street bike racks/parking, bike corrals, etc.)
    - No, the Project would not remove or degrade the existing bikeways and/or supporting facilities. In the Project study area, the bicycle facilities are mainly comprised of Class II bikeways, including Sunset Boulevard north of Vin Scully Avenue. The Project would provide 162 long-term bicycle parking spaces to residents to promote bicycle

connectivity between both Project Sites and the surrounding neighborhoods. The Project would also provide 21 short-term bicycle parking spaces. The Project would not preclude the City from implementing any planned bicycle facilities.

- Removal or degradation of existing transit and/or local circulator facilities including stop, bench, shelter, concrete pad, bus lane, or other amenities
    - No, the Project would not degrade existing transit and/or local circulator facilities. The Project Site is directly served by LA Metro Route 4, and Metro Route 92 and DASH Pico Union/Echo Park 0.25 mile to the west. LA Metro Route 4 is a high-frequency bus route.
- Removal of other existing transportation system elements supporting sustainable mobility
    - No, the Project does not propose to remove sustainable transportation elements. The Project encourages the development of a sustainable transportation system with its provision of bicycle parking, maintenance of sidewalks, and proposed development near transit. The Project will also provide approximately 32 parking spaces with EV charging stations and 74 EV-ready parking spaces.
- Increase street crossing distance for pedestrians; increase in number of travel/turning lanes; increase in turning radius or turning speeds.
    - No, the Project does not propose any changes to the public right-of-way that would increase street crossing distance for pedestrians, increase the number of travel lanes, or increase turning speeds.
- Removal, degradation, or narrowing of an existing sidewalk, path, crossing, or pedestrian access
    - No, the Project does not propose to remove, degrade, or narrow sidewalks or limit pedestrian access paths. The Project would retain or increase the existing sidewalk widths within and adjacent to the Project Site consistent with the right-of-way width requirements in *Mobility Plan 203*5.
- Removal or narrowing of existing sidewalk-street buffering elements (e.g., curb extension, parkway, planting strip, street trees, etc.)
    - No, the Project does not propose the removal or narrowing of existing sidewalk-street buffering elements. The Project also does not propose to remove any non-protected street trees located in the right-of-way adjacent to the Project Site.
- Increase in pedestrian or vehicle volume, and thereby increase the need or attraction to cross a street at unmarked pedestrian crossings or unsignalized or uncontrolled intersections where a crossing is not available without significant rerouting.

- Yes, the Project is projected to increase pedestrian and vehicle volumes at intersections surrounding the Project Site due to the increase in residents, visitors, and workers. However, signalized and marked crosswalks are available to access other destinations in the area. Therefore, the Project would not increase the need or attraction to cross streets at unmarked or uncontrolled pedestrian crossings.

- Result in new pedestrian demand between project site entries/exits and major destinations or transit stops expected to serve the development where there are missing pedestrian facilities (e.g., gaps in the sidewalk network) or substandard pedestrian facilities (e.g., narrow or uneven sidewalks, no crosswalks at intersections or mid-block, no marked crossing, or push button crossing rather than actuated, etc.).

    - There are currently missing curb ramps at the signalized intersection of Sunset Boulevard and Marion Avenue, which would also serve the Project Site's Access C. However, these would be added as part of the installation of the fourth leg of this intersection as part of the Project. There are unmarked crossings at nearby minor street intersections in residential areas to the south that may be used by pedestrians from the Project. However, most of these intersections connect lower-volume/local streets.

- Increase transit demand at bus stops that lack marked crossings, with insufficient sidewalks, or are in isolated, unshaded, or unlit areas.

    - The Project will increase transit demand at bus stops along Sunset Boulevard near the Project Site. These bus stops are served by signalized crosswalks and sidewalks. The bus stops do not provide dedicated lighting or shade but are adjacent to other active uses with ambient lighting.

No Project-related deficiencies or recommended actions were identified in this analysis. However, the Project proposes a related volunteered project design feature as part of construction:

- Coordinate with StreetsLA and the necessary City departments to provide a transit shelter at the bus stop located along Project frontage at the intersection of Sunset Boulevard and Marion Avenue to provide an enhanced experience for transit riders.

Figure 7

Sunset + Everett Project
Pedestrian Attractors Inventory

4.2 Project Access, Safety, and Circulation Evaluation

This section documents the peak hour intersection analysis conducted based on the screening criteria and trip threshold for intersection analyses provided in the TAG.

Study Analysis Locations

The study locations were selected for analysis based on guidance from the TAG, which indicates that intersections on either end of the Project's block, unsignalized intersections adjacent to the Project or integral to Project access, and signalized intersections in proximity to the Project Site through which 100 or more Project-generated trips would travel should be analyzed. The study intersections for the Project are illustrated in **Figure 8** and listed in **Table 12**.

Level of Service Methodology

Per the TAG, this analysis uses the *Highway Capacity Manual, 6th Edition* (HCM) (Transportation Research Board, 2016) methodology to evaluate the operation of Project driveways and nearby intersections. The LOS analysis was performed using the Synchro 11 software program. Synchro calculates vehicle delay, 95th percentile turning movement queues, and level of service (LOS) at intersections based on procedures outlined in the HCM. This methodology was used to determine the intersection delay in seconds, corresponding level of service (LOS), and queuing at the signalized, unsignalized, and driveway study intersections. **Table 13** presents the definitions for LOS.

Sunset + Everett Project
Study Intersections

Table 12: Study Intersections/Driveways

Intersection Number	North/South	East/West
1	Sunset Boulevard	Vin Scully Avenue
2	Sunset Boulevard	Marion Avenue/Driveway C
3	Sunset Boulevard	Everett Street
4	Sunset Boulevard	Beaudry Ave
Driveway ID	**North/South**	**East/West**
A	Sunset Boulevard	Driveway A
B	Sunset Boulevard	Driveway B

Table 13: Level of Service Defintions for Intersections (HCM 6 Methodology)

Level of Service	Average Stopped Delay per Vehicle (seconds) [Unsignalized]	Average Stopped Delay per Vehicle (seconds) [Signalized]	Definition
A	≤10	≤10	EXCELLENT. No vehicle waits longer than one red light and no approach phase is fully used.
B	>10 and ≤15	>10 and ≤20	VERY GOOD. An occasional approach phase is fully utilized; many drivers begin to feel somewhat restricted within groups of vehicles
C	> 15.0 and ≤ 25.0	>20 and ≤35	GOOD. Occasionally drivers may have to wait through more than one red light; backups develop behind turning vehicles.
D	> 25.0 and ≤ 35.0	>35 and ≤55	FAIR. Delays may be substantial during portions of the rush hours, but enough lower volumes periods occur to permit clearing of developing lines, preventing excessive backups.
E	> 35.0 and ≤ 50.0	>55 and ≤80	POOR. Represents the most vehicles intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.
F	>50	>80	FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Tremendous delays with increasing queue lengths.

Source: *Highway Capacity Manual, 6th Edition,* Transportation Research Board, 2016.

Analysis Scenarios

Three scenarios were analyzed (see below), each under three conditions: weekday AM and PM peak hour on a day without a Los Angeles Dodgers home game at nearby Dodger Stadium at 1000 Vin Scully Avenue, and PM peak hour on the day of a Dodgers evening home game. The inclusion of a Dodgers home game day incorporates the unique traffic patterns of attendees arriving at the stadium. The analysis takes into account modified lane configurations and signal timings at the intersection of Sunset Boulevard and Vin Scully Avenue (Study Intersection #1). The three scenarios are the following:

- **Existing (2023) Conditions:** Intersection turning movement counts were obtained for the study area and LOS was calculated to determine Existing conditions.
- **Opening Year (2027) No Project:** Based on the City's travel demand model and with the concurrence of LADOT, it was established that an ambient growth rate of 1.0% per year should be applied to adjust the Existing traffic volumes to reflect the effects of regional growth and development. This adjustment was applied to the Existing (2023) traffic volume data to reflect the effect of ambient growth by the year 2027. Additionally, Opening Year traffic forecasts include the effects of known specific projects, called related projects, expected to be implemented in the study area of the Project Site prior to the buildout date of the Project.
- **Opening Year (2027) Plus Project:** Project trip estimates were added to the Opening Year No Project forecasts.

Existing Traffic Conditions

Existing Traffic Volumes

New weekday AM and PM peak hour turning movement counts at the study intersections were collected in the Spring and Fall of 2023, when all local schools were in session. In addition, weekday PM peak hour turning movement counts at the study intersections were also collected on an evening where the Los Angeles Dodgers were playing a typical baseball home game at Dodger Stadium. This would capture pre-game inbound traffic into Dodger Stadium, which coincides with the typical PM peak hour. During these events, LADOT traffic control officers (TCOs) usually direct traffic at signalized intersections to improve intersection efficiency while non-game traffic may choose different routes to avoid the area. The COVID-19 Pandemic has resulted in societal changes and a "new normal" that caused changes in travel behavior and traffic volumes. Since 2021, pandemic-related shutdowns and government mandates have ended, and local schools and a majority of the workforce have returned to in-person environments. While further unknown changes in traffic volumes could still occur with the passage of time, 2023 offers a relatively stable and representative snapshot of current traffic conditions.

Weekday peak hour volumes and lane configurations at the study intersections are provided in **Appendix F**. Count sheets for these intersections are contained in **Appendix H** (non-Dodgers home game) and **Appendix I** (Dodgers home game).

Existing Level of Service

Existing (2023) traffic volumes in **Appendix F** were analyzed using the methodology described above to determine the operating conditions at the study intersections.

Table 14 presents the Existing (2023) weekday peak hour LOS for the study intersections. Analysis sheets are contained in **Appendix G**.

Traffic counts during the Dodgers evening home game period represent actual throughput, not demand. During pre-event periods, demand on Sunset Boulevard is high with significant congestion. Due to the gameday traffic operations with TCOs at intersections, less demand is served than the available capacity, and HCM queue and LOS results may appear better than the observed conditions.

Table 14: Existing (2023) Intersections Level of Service

NO.	Intersection	Control Type	Peak Hour	Existing (2023)	
				Average Vehicular Delay (sec/veh) [b]	LOS
1	Sunset Blvd & Vin Scully Ave	Signalized	AM	27.6	C
			PM	11.7	B
			PM (Dodgers)	31.7	C
2	Sunset Blvd & Marion Ave	Signalized	AM	7.8	A
			PM	4.1	A
			PM (Dodgers)	3.9	A
3	Sunset Blvd & Everett St	SSSC [a]	AM	31.4	D
			PM	38.2	E
			PM (Dodgers)	67.8	F
4	Sunset Blvd & Beaudry Ave	Signalized	AM	10.2	B
			PM	29.8	C
			PM (Dodgers)	30.6	C

Note:

[a] SSSC = Side Street Stop-Controlled

[b] Worst-performing movement reported for LOS and delay for unsignalized intersections.

Project Traffic

The development of peak hour vehicular traffic estimates for the Project involves the use of a three-step process: trip generation, trip distribution, and traffic assignment.

Trip Generation

The Project is a mixed-use development, with proposed uses being provided in two seven story buildings with the following land uses:

- 286 market-rate multi-family residential dwelling units
- 41 income-restricted multi-family residential dwelling units
- 9,462 sf of high-turnover sit-down restaurant space

Trip generation rates from Trip Generation, 11th Edition (Institute of Transportation Engineers [ITE], 2021) and the TAG were used to estimate the number of peak hour trips associated with the Project and are presented in **Table 15**. The Project is in an area that meets the Dense Multi-Use Urban ITE definition; therefore, the trip generation rates for Dense Multi-Use Urban were used when available per ITE and TAG guidance for the residential uses. These rates already consider the effects of transit and other non-automotive modes on trip-making, so no further external trip adjustments were utilized for the residential uses. Because Dense Multi-Use Urban trip generation rates are not available from ITE for the restaurant use, ITE's General Urban/Suburban trip generation rates were used for these uses and a 15% trip generation adjustment that consider the effects of transit, walking, and biking was applied in accordance with the TAG. Further adjustments were applied to all land uses to account for internalized trips between existing to remain and proposed uses based on MXD 2.0 *Mixed Use Trip Generation Methodology*. The MXD methodology was developed in partnership with the United States Environmental Protection Agency (EPA) to more accurately estimate the internalization of project trips associated with mixed-use developments and districts, which typically generate fewer vehicle trips than single use developments located in more isolated settings. Subsequent to the development of the original MXD methodology, Fehr & Peers has updated and refined the methodology to include additional model sensitivities, updated ITE trip generation rates, and updated input data from the City's travel demand model. Finally, a pass-by adjustment was applied to the restaurant use in accordance with the TAG to account for Project-generated traffic that is already present on adjacent roadways for reasons other than accessing the Project. Table 15 presents the trip generation methodology in detail. As shown, the Project is projected to generate a net increase of 152 trips (55 inbound/97 outbound) in the AM peak hour and 137 trips (81 inbound/56 outbound) in the PM peak hour.

Trip Distribution

The geographic distribution of trips generated by the Project is dependent on the characteristics of the street system serving the Project Site, the level of accessibility of routes to and from the Project Site, and locations of employment, commercial centers, and residential areas to which residents of the Project and from which the visitors to the Project would be drawn. The distribution pattern developed for the Project

were informed by these characteristics and distribution information from the Los Angeles citywide travel demand model. The Project's estimated trip distribution is illustrated in **Figure 9.**

Traffic Assignment

The traffic to be generated by the Project was assigned to the street network using the distribution patterns described in **Figure 9**. **Appendix F** provides the assignment of the Project-generated peak hour traffic volumes at the analyzed intersections during the AM, PM, and PM with Dodgers game peak hours. The assignment of traffic volumes took into consideration the locations of the Project driveways, turning restrictions, neighborhood circulation patterns, and traffic control devices to minimize difficult turning maneuvers and circuitous routes.

Table 15: Project Vehicle Trip Generation Estimate

Land Use	ITE Land Use Code	Size	Trip Generation Rates [a]						Estimated Trip Generation					
			AM Peak Hour			PM Peak Hour			AM Peak Hour Trips			PM Peak Hour Trips

Notes:

[a] Source: Institute of Transportation Engineers (ITE), *Trip Generation, 11th Edition* , 2021, or LADOT *Transportation Assessment Guildelines* (TAG), 2022, unless otherwise noted.

[b] Internal capture represents the percentage of trips between land uses that occur within the site. It is informed by MXD 2.0 Mixed Use Trip Generation Methodology, which incorporated the findings of NCHRP Project 8-51 as described in "Improved Estimation for Internal Trip Capture for Mixed-use Developments," ITE Journal, August 2010.

[c] Walk/bike/transit trip adjustment applied to account for the percentage of project trips that occur by walking, biking, or transit. The walk/bike/transit trip adjustment factor applied was determined based on guidance provided in LADOT's *Transportation Assessment Guidelines* (TAG), August 2022.

[d] Pass-by trip adjustment applied to account for the percentage of trips that would already be on the adjacent roadway but make a stop by the Project Site. The pass-by rate applied was determined based on guidance provided in Attachment J of the TAG. Restaurant applied rate: 20%.

[e] The Project commits to various TDM measures applicable to residential uses to reduce the number of vehicle trips to/from the Project Site. These are described in the Project's TA.

Sunset + Everett Project
Project Trip Distribution

Opening Year Traffic Volumes

To evaluate the potential effects of the Project on Opening Year (2027) conditions, it was necessary to develop estimates of future traffic conditions in the area both without and with Project traffic. First, estimates of traffic growth were developed for the study area to forecast future conditions without the Project. These forecasts included traffic increases because of both regional ambient traffic growth and traffic generated by specific developments in the vicinity of the Project (related projects).

These projected traffic volumes, identified herein as the Opening Year (2027) conditions, represent the future conditions without the Project. The traffic generated by the Project was then estimated and assigned to the surrounding street system. Project traffic was added to the Opening Year (2027) conditions to form Opening Year Plus Project traffic conditions, which were analyzed to determine the incremental traffic impacts attributable to the Project itself.

The assumptions and analysis methodology used to develop each of the future year scenarios discussed above are described in more detail in the following sections.

Background or Ambient Growth

Based on the Los Angeles citywide travel demand model and with the concurrence of LADOT, it was established that an ambient volume growth factor 1% per year should be applied to adjust the Existing (2023) traffic volumes to reflect the effects of regional growth and development. This adjustment was applied to the Existing (2023) traffic volume data to reflect the effect of ambient growth in traffic volumes by the year 2027.

Related Project Traffic Generation and Assignment

Opening Year traffic forecasts include the effects of known specific projects, called related projects, expected to be implemented in the study area of the Project Site prior to the buildout date of the Project. The list of related projects was prepared based on data from LADOT. A total of eight related projects were identified in the study area; these projects were listed in **Table 7** and their locations were illustrated in **Figure 6** in Chapter 2.

Trip Generation

For related projects provided by LADOT, the trip generation was used as provided. **Table 7** presents the resulting trip generation estimates for these related projects. These projections are conservative in that they do not in every case account for either the existing uses to be removed or the possible use of non-motorized travel modes (transit, walking, etc.). Corrective actions and mitigation measures associated with the related projects are also not in every case accounted for in the analysis.

Trip Distribution

The geographic distribution of the traffic generated by the related projects is dependent on several factors. These factors include the type and density of the proposed land uses, the geographic distribution of

population from which employees and potential patrons of proposed commercial developments may be drawn, the locations of employment and commercial centers to which residents of residential projects may be drawn, and the location of the projects in relation to the surrounding street system.

Traffic Assignment

Using the estimated trip generation and trip distribution patterns described above, traffic generated by the related projects was assigned to the street network based on street classification, proximity to signalized intersections, and typical traffic conditions.

Opening Year No Project Traffic Volumes

Opening Year (2027) peak hour traffic volumes and lane geometries for the three scenarios (weekday AM, PM, and Dodgers home game) for the analyzed intersections are provided in **Appendix F**. The Opening Year (2027) traffic conditions represent an estimate of future conditions without the Project inclusive of the ambient background growth and related projects' traffic.

Opening Year Plus Project Traffic Projections

The Project traffic volumes were added to the Opening Year (2027) traffic projections, resulting in Opening Year (2027) Plus Project peak hour traffic volumes. As provided in **Appendix F**, the Opening Year (2027) Plus Project scenario represents future traffic conditions with the completion of the Project.

Opening Year Operational Analysis

The Opening Year (2027) No Project and Plus Project peak hour traffic volumes were analyzed to determine the projected LOS and 95th percentile queue lengths for the turn pockets and through movements for the study intersections. Project access is considered constrained if the project's traffic would contribute to unacceptable queuing on an Avenue or Boulevard (as designated in the *Mobility Plan* 2035) at project driveway(s) or would cause or substantially extend queuing at nearby signalized intersections.

Per the TAG, a project would be considered to contribute to unacceptable or extended queuing under any of the following conditions:

- Additional queue along through lanes and either of the following conditions are expected:
    - The projected peak hour intersection LOS is D and the through lane queue increases by greater than 75 feet on any approach with the directional approach LOS at E or F, or
    - The projected peak hour intersection LOS is E or F and the through lane queue increases by greater than 50 feet on any approach with the directional approach LOS at E or F.
- Spill over from turn pockets into through lanes
- Blocks cross streets or alleys
- Spill over from drive-throughs into streets (not applicable to the Project)

- Contribute to "gridlock" congestion, where "gridlock" is defined as when traffic queues between closely-spaced intersections impedes the flow of traffic through upstream intersections.

Table 16 presents the Opening Year (2027) and Opening Year Plus Project LOS for the study intersections, along with the 95th percentile queue lengths and approach LOS for the vehicular movements at study intersections.

The addition of Project traffic to study intersections would not cause or substantially contribute to unacceptable queuing during any peak hours per the City's criteria. Detailed intersection LOS worksheets for the study intersections are presented in **Appendix G**.

Corrective Measures

Because the Project is not projected to cause or substantially contribute to unacceptable queuing at any study intersections, no corrective measures are proposed.

Table 16: Opening Year (2027) Plus Project LOS and Queues

#	Study Intersection	Control Type	Opening Year (2027) No Project					Opening Year (2027) Plus Project				Movement[1]	Storage Length	Peak Hour 95th Percentile Queue[3] (ft.)						Project Contributes to Unacceptable Queuing[2]

1. EBL= Eastbound left, EBT = Eastbound through, EBR = Eastbound right, WBL = Westbound left, WBT = Westbound through, WBR = Westbound right, NBL = Northbound left, NBT = Northbound through, NBR = Northbound right, SBL = Southbound left, SBT = Southbound through, SBR = Southbound right.

2. Unacceptable queuing as defined in the report text, per the *Los Angeles Department of Transportation Transportation Assessment Guidelines* (August 2022).

3. Queue lengths are outputs derived from the Opening Year Conditions Synchro model developed for this Project. The 95th percentile queue length is a conservative assumption commonly employed for intersection design considerations and does not represent the typical queue length an average driver would experience.

4. Intersection LOS for unsignalized intersections reported using the worst-performing movement.

4.3 Site Access Evaluation

This section evaluates the site access of the Project driveways, including projected levels of service (LOS) and queuing.

Project Driveways

Vehicular access to the Project Site would be provided via two stop-controlled driveways and one-signalized driveway that would provide access to structured parking. There are currently 13 driveways serving the Project Site along Sunset Boulevard. The Project proposes reducing vehicular access points to three driveways (Access A, B, and C) on Sunset Boulevard. The other existing vehicle access points to the Project site would be closed. Below is a description of the Project's proposed driveways:

- **Access A:** The Project proposes a left- and right-in/right-out only driveway off of Sunset Boulevard at the northern end of the Site. Outbound left-turns from this driveway would not be permitted.
- **Access B:** The Project proposes a left- and right-in/right-out only driveway off of Sunset Boulevard in the middle of the Site. Outbound left-turns from this driveway would not be permitted.
- **Access C:** The Project proposes a full-access driveway that would form the fourth leg (west facing) of the signalized intersection of Sunset Boulevard and Marion Avenue (Study Intersection #2).

Each driveway would serve separate parking structures. The Project's vehicular driveways would be designed to the City standards and would provide adequate sight distance. They would not require the removal or relocation of existing public transit stops. Sunset Boulevard along the Project Site is part of the designated HIN, however, the number of Project Site driveways along Sunset Boulevard would be reduced from 13 to three (3). Loading would be provided on-site.

Project Driveway LOS Analysis

An LOS and queuing analysis was completed to understand Project driveway operations during the AM, PM, and PM with Dodgers game peak hours. Project driveway trip generation, distribution, and assignment are based on the same assumptions for study intersections discussed in Chapter 4.2. These analysis locations are shown in **Figure 8**. **Table 17** summarizes the LOS and queuing analyses. The Opening Year (2027) AM, PM, and PM with Dodgers game peak hour turning movement counts and lane configurations for each of the Project driveways/access intersections are presented in **Appendix F**. **Appendix G** provides the detailed LOS and queuing reports. As shown, the Project driveways/access points are expected to operate with limited queues and acceptable LOS.

Table 17: Opening Year (2027) Plus Project Driveway LOS and Queue Lengths

#	Project Access Locations	Opening Year (2027) Plus Project				Movement[1]	Storage Length	Peak Hour 95th Percentile Queue[5]			Project Contributes to Unacceptable Queuing[2]		
		Intersection LOS (AM/PM Peak Hour/Dodgers Scenario)	Peak Hour Directional LOS					Opening Year (2027) Plus Project					
			AM	PM	PM (Dodgers)			AM	PM	PM (Dodgers)	AM	PM	PM (Dodgers)
A	Sunset Blvd & Driveway A	B/C/C	-	-	-	NBT/R[3]	100	<25	<25	<25	-	-	-
			B	C	C	SBL[3]	100	<25	<25	<25	No	No	No
			B	C	C	WBR[4]	On-Site	<25	<25	<25	No	No	No
B	Sunset Blvd & Driveway B	B/C/C	-	-	-	NBT/R[3]	100	<25	<25	<25	-		-
			B	C	C	SBL[3]	100	<25	<25	<25	No	No	No
			B	C	C	WBR[4]	On-Site	<25	<25	<25	No	No	No

			D	D	D	EBT/R[3]	875	75	100	100	No	No	No
			D	C	C	WBL/T/R[4]	On-Site	25	25	25	No	No	No

1. EBL= Eastbound left, EBT = Eastbound through, EBR = Eastbound right, WBL = Westbound left, WBT = Westbound through, WBR = Westbound right, NBL = Northbound left, NBT = Northbound through, NBR = Northbound right, SBL = Southbound left, SBT = Southbound through, SBR = Southbound right. All queues are combined for the full approach, as there is no more than one lane in each direction at the Project driveways.

2. Unacceptable queuing as defined in the report text, per the *TAG (August 2022)*.

3. Inbound movement

4. Outbound movement

5. Queue lengths are outputs derived from the Opening Year Conditions Synchro peak hour models developed for this Project. The 95th percentile queue length is a conservative assumption commonly employed for intersection design considerations and does not represent the typical queue length an average driver would experience.

4.4 Project Construction

This section assesses whether the construction of the Project would interfere with pedestrian, bicycle, transit, or vehicle circulation and accessibility, considering three categories of construction impacts per the TAG: (1) temporary transportation constraints, (2) temporary loss of access, and (3) temporary loss of bus stops or rerouting of bus lines.

Project construction is anticipated to be completed in 2027. It is estimated that approximately 40,000 cubic yards of export would be hauled from the Project Site.

Anticipated Construction Activity

Project construction is expected to occur in stages starting in late 2024 and finishing in 2027. Below are the following phases of construction and their estimated durations:

- Phase 1: Demolition of Asphalt – 1 week
- Phase 2: Site Preparation – 2 weeks
- Phase 3: Grading – 4 months
- Phase 4: Trenching – 1 month
- Phase 5: Construction – 24 months
- Phase 6: Architectural Coatings – 3 months

Los Angeles Municipal Code (LAMC) Section 41.40 provides that construction activities are limited to the hours from 7:00 AM to 9:00 PM on weekdays and from 8:00 AM to 6:00 PM on Saturdays and holidays. No construction is permitted on Sundays.

Construction Trucks

Haul Trucks

During construction, up to 68 one-way haul truck trips per day are anticipated on peak haul days.

Hauling hours are anticipated to begin at 7:00 AM and continue to 5:00 PM, Monday through Saturday. The haul route would utilize Sunset Boulevard, Cesar Chavez Boulevard, and Mission Road to access the US-101 Freeway. Haul trucks would then utilize this freeway to access I-10 to I-605 to access landfill sites.

Equipment and Delivery Trucks

In addition to haul trucks, the Project is expected to generate equipment and delivery truck trips during construction. One example would be for concrete delivery, which would be required for the subterranean parking and the buildings on-site. Other deliveries could include plumbing supplies, electrical fixtures, and items used in furnishing the buildings. These materials would be delivered to the Project Site and stored on-site. These deliveries are expected to occur in variously sized vehicles including small delivery trucks to

cement mixer trucks and 18-wheel trucks. Additionally, construction equipment would have to be delivered to the Project Site. This equipment could include cranes, bulldozers, excavators, and other large items of machinery. Most of the heavy equipment is expected to be transported to the Project Site on large trucks such as 18-wheelers or other similar vehicles.

Up to 54 one-way delivery/equipment truck trips are expected per day during the peak construction phase of pouring the foundation.

Construction Employees

The number of construction workers would vary throughout the construction period. Up to 284 one-way worker trips are expected per day during the peak construction phase.

Construction Worker Parking

Staging and parking areas during construction would initially be located at an off-site location to be determined at a future date. No staging and worker parking would occur on public streets and rights-of-way. Workers would park in the Project's subterranean parking garage after it is constructed.

Construction Period Evaluation Criteria

The TAG provides three categories to be considered in regard to in-street construction effects: temporary traffic constraints, temporary loss of access, and temporary loss of bus stops or rerouting of bus lines. The evaluation criteria to be considered in each of these categories are as follows:

- Temporary Traffic Constraints:
    - The length of time of temporary street closures or closures of two more traffic lanes;
    - The classification of the street (major arterial, state highway, substandard hillside local or collector, etc.) affected;
    - The existing congestion levels on the affected street segments and intersections;
    - The operational constraints of substandard hillside streets needing to access construction sites;
    - Whether the affected street directly leads to a freeway on- or off-ramp or other state highway;
    - Potential safety issues involved with street or lane closures; and
    - The presence of emergency services (fire, hospital, etc.) located nearby that regularly use the affected street.
- Temporary Loss of Access:
    - The length of time of any loss of pedestrian or bicycle circulation past a construction area;
    - The length of time of any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area;

- The length of time any loss or impedance of access by emergency vehicles or area residents to hillside properties;
- The length of time of any loss of ADA pedestrian access to a transit station, stop, or facility;
- Permanent or temporary removal of parking meters
- The availability of nearby vehicular or pedestrian access within ¼ mile of the lost access; and
- The type of land uses affected, and related safety, convenience, and/or economic issues.

- Temporary Loss of Bus Stops or Rerouting of Bus Lines:
  - The length of time that an existing bus stop would be unavailable or that existing service would be interrupted;
  - The availability of a nearby location (within ¼ mile) to which the bus stop or route can be temporarily relocated;
  - The existence of other bus stops or routes with similar routes/destinations within a ¼ mile radius of the affected stops or routes; and
  - Whether the interruption would occur on a weekday, weekend or holiday, and whether the existing bus route typically provides service that/those day(s).

Construction Analysis

The assessment of the Project against the evaluation factors described above is presented in **Table 18** and discussed below.

Temporary Traffic Constraints

Long-term closures to primary travel lanes are not anticipated to occur during construction of the Project along Sunset Boulevard or Everett Street. To accommodate Project construction, closure of the northbound parking/PM peak hour bus lane on Sunset Boulevard along the Project frontage is anticipated between 6:30 AM and 4:00 PM, so as not to interfere with PM peak hour buses or the Dodger Stadium Express bus route during home games. During construction of the Project, a pedestrian canopy will be constructed to maintain access to the sidewalk, bus stop, and crosswalks at Marion Avenue.

Temporary Loss of Access

The existing land uses near the vicinity of the Project Site will remain open throughout construction. Pedestrian and vehicular access to properties located adjacent and near to the Project Site would remain open and unobstructed for the duration of construction. No loss of ADA pedestrian access to transit stops, stations, or facilities is anticipated. On-street parking on the Project frontage along Sunset Boulevard and Everett Street will be restricted during the construction period.

Temporary Loss of Bus Stops or Rerouting of Bus Lines

Project construction would not require temporary loss or relocation of bus stops or rerouting of bus lines.

Table 18: Construction Evaluation

Evaluation Criteria	Assessment
Temporary Transportation Constraints	
The length of time of temporary street closures or closures of two or more travel lanes	The Project will not close two or more travel lanes during construction. Project construction will close the northbound parking/PM peak hour bus lane on Sunset Boulevard along the Project frontage. Closures are not expected on Everett Street. Access would be maintained for adjacent properties at all times.
The classification of the street (major arterial, state highway, substandard hillside local or collector, etc.) affected	Sunset Boulevard is classified as an Avenue I. Everett Street is a Local Street.
The existing congestion levels on the affected street segments and intersections	Sunset Boulevard and Vin Scully Avenue was observed to operate between LOS B and E during peak hours. Sunset Boulevard and Marion Avenue was observed to operate at LOS A during peak hours. Sunset Boulevard and Everett Street was observed to operate between LOS D and F during peak hours. Sunset Boulevard and Beaudry Avenue was observed to operate at LOS F during peak hours.
The operational constraints of substandard hillside streets needing to access construction sites	Not applicable.
Whether the affected street directly leads to a freeway on- or off-ramp or other state highway	Construction would not involve street closures on roadways that lead onto or from freeway ramps.
Potential safety issues involved with street or lane closures	Although the construction work may cause temporary disruptions to street access, alternative routing and detours would be identified and marked in coordination with LADOT and the City of Los Angeles Bureau of Engineering. Traffic control plans would be designed in accordance with LADOT standards, the CAMUTCD, and the Work Area Traffic Control Handbook (WATCH).
The presence of emergency services (fire, hospital, etc.) located nearby that regularly use the affected street	There are no emergency services in the immediate vicinity of the Project.
Temporary Loss of Access	
The length of time of any loss of pedestrian or bicycle circulation past a construction area	Pedestrian access along Sunset Boulevard would be maintained through use of a pedestrian canopy along the Project frontage. Closures are not expected on Everett Street.
The length of time of any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area	It is not anticipated that any non-Project parcels would lose vehicular, bicycle, or pedestrian access.
The length of time of any loss or impedance of access by emergency vehicles or area residents to hillside properties	Not applicable.
The length of time of any loss of ADA pedestrian access to a transit station, stop, or facility	It is not anticipated that ADA pedestrian access to the bus stop at NB SUNSET NS MARION would be affected.
The availability of nearby vehicular or pedestrian access within ¼ mile of the lost access	Not applicable.
The type of land uses affected, and related safety, convenience, and/or economic issues	The Project site is in a primarily residential area with commerical and retail parcels along Sunset Boulevard.
Temporary Loss of Bus Stops or Rerouting of Bus Lines	
The length of time that an existing bus stop would be unavailable or that existing service would be interrupted	It is not anticipated that the existing bus stop at NB SUNSET NS MARION will be affected. Construction closure of the northbound parking/PM peak hour bus lane on Sunset Boulevard will end at 4:00 PM daily to accommodate usage by transit vehicles.
The availability of a nearby location (within ¼ mile) to which the bus stop or route can be temporarily relocated	Not applicable.
The existence of other bus stops or routes with similar routes/destinations within a ¼-mile radius of the affected stops or routes	Not applicable.
Whether the interruption would occur on a weekday, weekend or holiday, and whether the existing bus route typically provides service that/those day(s)	Not applicable.

Appendix A:
Memorandum of Understanding

Transportation Assessment Memorandum of Understanding (MOU)

This MOU acknowledges that the Transportation Assessment for the following Project will be prepared in accordance with the latest version of LADOT's Transportation Assessment Guidelines:

I. PROJECT INFORMATION

Project Name: Sunset + Everett

Project Address: 1187 Sunset Blvd, Los Angeles, CA 90012

Project Description: The Project proposes to replace a 107,100 sf vacant parcel with two seven-story mixed-use buildings providing 327 dwelling units (41 of which are affordable at the Very Low Income level), 9,462 sf of commercial space, and 263 on-site parking spaces.

LADOT Project Case Number: _____ Project Site Plan attached? *(Required)* ☒ Yes ☐ No Figure 1a

II. TRANSPORTATION DEMAND MANAGEMENT (TDM) MEASURES

Select any of the following TDM measures, which may be eligible as a Project Design Feature[1], that are being considered for this project:

✔ Reduced Parking Supply[2] **per AB 2097**	✔ Bicycle Parking and Amenities	☐ Parking Cash Out

List any other TDM measures (e.g. bike share kiosks, unbundled parking, microtransit service, etc.) below that are also being considered and would require LADOT staff's determination of its eligibility as a TDM measure. LADOT staff will make the final determination of the TDM measure's eligibility for this project.

1 See Attachment A

2 _____

3 _____

4 _____

5 _____

6 _____

III. TRIP GENERATION

Trip Generation Rate(s) Source: ITE 10th Edition / Other ITE 11th Edition & LADOT TAG (Residential)

Trip Generation Adjustment *(Exact amount of credit subject to approval by LADOT)*	**Yes**	**No**
Transit Usage	✔	☐
Existing Active or Previous Land Use	☐	✔
Internal Trip	✔	☐
Pass-By Trip	✔	☐
Transportation Demand Management (See above)	✔	☐

Trip generation table including a description of the existing and proposed land uses, rates, estimated morning and afternoon peak hour volumes (ins/outs/totals), proposed trip credits, etc. attached? *(Required)* ✔ Yes ☐ No

	IN	OUT	TOTAL
AM Trips	55	97	152
PM Trips	81	56	137

Table 1

NET Daily Vehicle Trips (DVT)

_____ DVT (ITE __ ed.)

2,217 DVT (VMT Calculator ver. 1.3)

Figure 2

[1] At this time Project Design Features are only those measures that are also shown to be needed to comply with a local ordinance, affordable housing incentive program, or State law.

[2] Select if reduced parking supply is pursued as a result of a parking incentive as permitted by the City's Bicycle Parking Ordinance, State Density Bonus Law, or the City's Transit Oriented Community Guidelines.

IV. STUDY AREA AND ASSUMPTIONS

Per Project TAZ in City travel demand model

Project Buildout Year: 2027 Ambient Growth Rate: 1 % Per Yr. Table 2 & Figure 3

Related Projects List, researched by the consultant and approved by LADOT, attached? *(Required)* ☒ Yes ☐ No

STUDY INTERSECTIONS and/or STREET SEGMENTS:
(May be subject to LADOT revision after access, safety, and circulation evaluation.)

see Attachment B for additional study scenario

1 Sunset Bl & Vin Scully Av
2 Sunset Bl & Marion Av/Dwy C
3 Sunset Bl & Everett St
4 Sunset Bl & Beaudry Av
5 *Segment:* Marion Av w/o Sunset Bl
6

Provide a separate list if more than six study intersections and/or street segments. Figure 4

Is this Project located on a street within the High Injury Network? ☒ Yes ☐ No

If a study intersection is located within a ¼-mile of an adjacent municipality's jurisdiction, signature approval from said municipality is required prior to MOU approval.

V. ACCESS ASSESSMENT

a. Does the project exceed 1,000 net DVT? ☒ Yes ☐ No
b. Is the project's frontage 250 linear feet or more along an Avenue or Boulevard as classified by the City's General Plan? ☒ Yes ☐ No
c. Is the project's building frontage encompassing an entire block along an Avenue or Boulevard as classified by the City's General Plan? ☒ Yes ☐ No

VI. ACCESS ASSESSMENT CRITERIA

If Yes to any of the above questions a., b., or c., complete **Attachment C.1: Access Assessment Criteria**.

VII. SITE PLAN AND MAP OF STUDY AREA

Please note that the site plan should also be submitted to the Department of City Planning for cursory review.

	Does the attached site plan and/or map of study area show	Yes	No	Not Applicable
Figure 4	Each study intersection and/or street segment	✔		
Figure 6	*Project Vehicle Peak Hour trips at each study intersection	✔		
Figure 6	*Project Vehicle Peak Hour trips at each project access point	✔		
Figures 5a-b	*Project trip distribution percentages at each study intersection	✔

	Pedestrian access points and any pedestrian paths	✔		
	Pedestrian loading zones			✔
	Delivery loading zone or area	✔		
	Bicycle parking onsite	✔		
Figure 1a	Bicycle parking offsite (in public right-of-way)	✔		

*For mixed-use projects, also show the project trips and project trip distribution by land use category.

VIII. FREEWAY SAFETY ANALYSIS SCREENING

Will the project add 25 or more trips to any freeway off-ramp in either the AM or PM peak hour? ☐ **YES** ☒ **NO**

Provide a brief explanation or graphic identifying the number of project trips expected to be added to the nearby freeway off-ramps serving the project site. If Yes to the question above, a freeway ramp analysis is required.

IX. CONTACT INFORMATION

	CONSULTANT	DEVELOPER
Name:	Ryan Liu, PE | Fehr & Peers	Aragon Properties, Ltd.

Phone Number:	(213) 261-3050	(604) 732-6170
E-Mail:	r.liu@fehrandpeers.com	emoy@aragon.ca

Approved by:	x		8 May 2023	x		06/21/2023	
		Consultant's Representative	Date		LADOT Representative	**Date	
Adjacent Municipality:			Approved by: (if applicable)		Representative		Date

**MOUs are generally valid for two years after signing. If after two years a transportation assessment has not been submitted to LADOT, the developer's representative shall check with the appropriate LADOT office to determine if the terms of this MOU are still valid or if a new MOU is needed.

Access Assessment Criteria

This Criteria acknowledges that the Transportation Assessment for the following Project will be prepared in accordance with the latest version of LADOT's Transportation Assessment Guidelines:

I. PROJECT INFORMATION

Project Name: Sunset + Everett

Project Address: 1187 Sunset Blvd, Los Angeles, CA 90012

Project Description: The Project proposes to replace a 107,100 sf vacant parcel with two seven-story mixed-use buildings providing 327 dwelling units (41 of which are affordable at the Very Low Income level), 9,462 sf of commercial space, and 263 on-site parking spaces.

LADOT Project Case Number: _____

II. PEDESTRIAN/ PERSON TRIP GENERATION

Source of Pedestrian/Person Trip Generation Rate(s)? ☑ VMT Calculator ☐ ITE 10th Edition ☐ Other:

	Land Use	Size/Unit	Daily Person Trips
Proposed	All Project Land Uses - See VMT Calculator		278
	(assume 15% of Project trips)		
	Total new trips:		278

Pedestrian/Person trip generation table including a description of the proposed land uses, trip credits, person trip assumptions, comparison studies used for reference, etc. attached? ☐ Yes ☑ No

III. PEDESTRIAN ATTRACTORS INVENTORY

Attach Pedestrian Map for the area (1,320-foot radius from edge of the project site) depicting: Figure 7

- site pedestrian entrance(s)
- Existing or proposed passenger loading zones
- pedestrian generation/distribution values
  - Geographic Distribution: N 50 % S 30 % E 10 % W 10 % From distribution of pedestrian attractors
- transit boarding and alighting of transit stops (should include Metro rail stations; Metro, DASH, and other municipal bus stops)
- Key pedestrian destinations with hours of operation:
  - schools (school times)
  - government offices with a public counter or meeting room
  - senior citizen centers
  - recreation centers or playgrounds
  - public libraries
  - medical centers or clinics
  - child care facilities
  - post offices

- places of worship
- grocery stores
- other facilities that attract pedestrian trips

- pedestrian walking routes to key destinations from project site

Note: Pedestrian Count Summary, Bicycle Count Summary, Manual Traffic Count Summary will need to be attached to the Transportation Assessment

IV. FACILITIES INVENTORY

Is a High Injury Network street located within 1,320-foot radius from the edge of the project site? ☑ Yes ☐ No
If yes, list streets and include distance from the project:

Sunset Blvd _____ at 0 _____(feet)
Temple Blvd _____ at 1275 _____(feet)
_____ at _____(feet)
_____ at _____(feet)

Attach Radius Map for the area (1,320 foot radius from edge of the project site) depicting the following existing and proposed facilities: Figure 8

- transit stops
- bike facilities
- traffic control devices for controlled crossings
- uncontrolled crosswalks
- location of any missing, damaged or substandard sidewalks

For a reference of planned facilities, see the Transportation Assessment Support Map

Crossing Distances

Does the project property have frontage along an arterial street (designated as either an Avenue or Boulevard?)
☑ Yes ☐ No

If yes, provide the distance between the crossing control devices (e.g. signalized crosswalk, or controlled mid-block crossing) along any arterial within 1,320 feet of the property.

0 (feet) at Sunset Blvd / Marion Ave	_____(feet) at _____
1,100 (feet) at Sunset Blvd / Beaudry Ave	_____(feet) at _____
1,500 (feet) at Sunset Blvd / Vin Scully Ave	_____(feet) at _____
_____(feet) at _____	_____(feet) at _____
_____(feet) at _____	_____(feet) at _____
_____(feet) at _____	_____(feet) at _____

V. Project Construction

Will the project require any construction activity within the city right-of-way? ☑ Yes ☐ No

If yes, will the project require temporary closure of any of the following city facilities?

- X sidewalk
- bike lane
- parking lane
- travel lane
- bus stop
- bicycle parking (racks or corrals)
- bike share or other micro-mobility station
- car share station
- parklet
- other: _____

Notes:

[a] Source: Institute of Transportation Engineers (ITE), *Trip Generation, 11th Edition* , 2021, or LADOT *Transportation Assessment Guildelines* (TAG), 2022, unless otherwise noted.

[b] Internal capture represents the percentage of trips between land uses that occur within the site. It is informed by MXD 2.0 Mixed Use Trip Generation Methodology, which incorporated the findings of NCHRP Project 8-51 as described in "Improved Estimation for Internal Trip Capture for Mixed-use Developments," ITE Journal, August 2010.

[c] Walk/bike/transit trip adjustment applied to account for the percentage of project trips that occur by walking, biking, or transit. The walk/bike/transit trip adjustment factor applied was determined based on guidance provided in LADOT's *Transportation Assessment Guidelines* (TAG), August 2022.

[d] Pass-by trip adjustment applied to account for the percentage of trips that would already be on the adjacent roadway but make a stop by the Project Site. The pass-by rate applied was determined based on guidance provided in Attachment J of the TAG. Restaurant applied rate: 20%.

[e] The Project commits to various TDM measures applicable to residential uses to reduce the number of vehicle trips to/from the Project Site. These are described in the Project's TA.

CITY OF LOS ANGELES VMT CALCULATOR Version 1.3

Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: Sunset + Everett

Scenario: Project

Address: 1187 W SUNSET BLVD, 90012

Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
Housing | Multi-Family	22	DU

☐ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Housing | Affordable Housing - Family	41	DU
Housing | Multi-Family	286	DU
Retail | High-Turnover Sit-Down Restaurant	9.462	ksf
Housing | Affordable Housing - Family	41	DU

☐ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
0 Daily Vehicle Trips	2,217 Daily Vehicle Trips
0 Daily VMT	13,934 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	2,217 Net Daily Trips
The net increase in daily VMT ≤ 0	13,934 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	9.462 ksf

The proposed project is required to perform VMT analysis.

ATTACHMENT A

TRANSPORTATION DEMAND MANAGEMENT PROGRAM

SUNSET/EVERETT PROJECT

Quantifiable TDM Measures as Project Design Features (CEQA)
Reduced parking supply from LAMC minimum (263 spaces instead of 621 spaces)
Promotion and marketing program (kiosk, coordinator, pamphlets, website)
Including minimum bike parking per LAMC

Attachment B

In consultation with LADOT, we propose to collect traffic volume counts and study the standard AM peak period (7:00AM-10:00AM) and PM peak period (3:00PM-6:00PM), as well as an additional study of PM peak period (3:00PM-6:00PM) on the day of a Dodgers home game, given the Project's proximity to Vin Scully Ave and Dodger Stadium.

Screening Criteria	Screening Evaluation	Analysis Required?
2.1 CONFLICTING WITH PLANS, PROGRAMS, ORDINANCES, OR POLICIES		
If the project requires a discretionary action, and the answer is yes to any of the following questions, further analysis will be required to assess whether the proposed project would conflict with plans, programs, ordinances, or policies: 1. Does the project require a discretionary action that requires the decision maker to find that the decision substantially conforms to the purpose, intent and provisions of the General Plan? 2. Is the project known to directly conflict with a transportation plan, policy, or program adopted to support multimodal transportation options or public safety? 3. Is the project required to or proposing to make any voluntary modifications to the public right-of-way (i.e., dedications and/or improvements in the right-of-way, reconfigurations of curb line, etc.)?	1. Yes 2. No 3. Yes	Yes, see Chapter 3.1 and Appendix D

2.2 CAUSING SUBSTANTIAL VEHICLE MILES TRAVELED		
If the project requires a discretionary action, and the answer is no to either T-2.1-1 or T-2.1-2, further analysis will not be required for Threshold T-2.1, and a "no impact" determination can be made for that threshold: 1. T-2.1-1: Would the land use project generate a net increase of 250 or more daily vehicle trips? 2. T-2.1-2: Would the project generate a net increase in daily VMT? In addition to the above screening criteria, the portion of, or the entirety of a project that contains small-scale or local serving retail uses are assumed to have less than significant VMT impacts. If the answer to the following question is no, then that portion of the project meets the screening criteria and a no impact determination can be made for the portion of the project that contains retail uses. However, if the retail project is part of a larger mixed-use project, then the remaining portion of the project may be subject to further analysis in accordance with the above screening criteria. Projects that include retail uses in excess of the screening criteria would need to evaluate the entirety of the project's vehicle miles traveled, as specified in Section 2.2.4. 3. If the project includes retail uses, does the portion of the project that contain retail uses exceed a net 50,000 square feet? Independent of the above screening criteria, and the project requires a discretionary action, further analysis will be required if the following statement is true: 4. Would the Project or Plan located within a one-half mile of a fixed-rail or fixed-guideway transit station replace an existing number of residential units with a smaller number of residential units?	1. Yes 2. Yes 3. No 4. No	Yes, see Chapter 3.2
2.3 SUBSTANTIALLY INDUCING ADDITIONAL AUTOMOBILE TRAVEL		
If the answer is no to the following question, further analysis will not be required for Threshold T-2.2, and a no impact determination can be made for that threshold: 1. T-2.2: Would the project include the addition of through traffic lanes on existing or new highways, including general purpose lanes, high-occupancy vehicle (HOV) lanes, peak period lanes, auxiliary lanes, and lanes through grade-separated interchanges (except managed lanes, transit lanes, and auxiliary lanes of less than one mile in length designed to improve roadway safety)?	1. No	No

2.4 SUBSTANTIALLY INCREASING HAZARDS DUE TO A GEOMETRIC DESIGN FEATURE OR INCOMPATIBLE USE		
If the project requires a discretionary action, and the answer is "yes" to either of the following questions, further analysis will be required to assess whether the project would result in impacts due to geometric design hazards or incompatible uses: 1. Is the project proposing new driveways, or introducing new vehicle access to the property from the public right-of-way? 2. Is the project proposing to, or required to make any voluntary or required, modifications to the public right-of-way (i.e., street dedications, reconfigurations of curb line, etc.)? 3. Does the land use project involve a discretionary action that would be under review by the Department of City Planning? 4. Would the land use project generate a net increase of 250 or more daily vehicle trips? 5. Would the land use project add 25 or more trips to any off-ramp in either the morning of afternoon peak hour?	1. Yes 2. Yes 3. Yes 4. Yes 5. No	Yes, see Chapter 3.3
3.2 PEDESTRIAN, BICYCLE, AND TRANSIT ACCESS ASSESSMENT		
If the answer is yes to all of the following questions, further analysis will be required to assess whether the project would negatively affect existing pedestrian, bicycle, or transit facilities: 1. Does the land use project involve a discretionary action that would be under review by the Department of City Planning? 2. Does the land use project include the construction, or addition of: a. 50 dwelling units or guest rooms or combination thereof, or b. 50,000 square feet of non-residential space? 3. Would the project generate a net increase of 1,000 or more daily vehicle trips, or is the project's frontage along an Avenue, Boulevard, or Collector (as designated in the City's General Plan) 250 linear feet or more, or is the project's building frontage encompassing an entire block along an Avenue or Boulevard (as designated in the City's General Plan)?	1. Yes 2. Yes (a.) 3. Yes	Yes, see Chapter 4.1
3.3 PROJECT ACCESS, SAFETY, AND CIRCULATION EVALUATION		

Land Use Development Projects: For land use projects, if the answer is yes to all of the following questions, further analysis will be required to assess whether the project would negatively affect project access and circulation: 1. Does the land use project involve a discretionary action that would be under review by the Department of City Planning? 2. Would the land use project generate a net increase of 500 or more daily vehicle trips?	1. Yes 2. Yes	Yes, see Chapter 4.2
3.4 PROJECT CONSTRUCTION		
If the answer is yes to any of the following questions, further analysis will be required to assess if the project could negatively affect existing pedestrian, bicycle, transit, or vehicle circulation: 1. Would a project that requires construction activities to take place within the right-of-way of a Boulevard or Avenue (as designated in the Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than one day (including day and evening hours, and overnight closures if on a residential street?) 2. Would a project require construction activities to take place within the right-of-way of a Collector or Local Street (as designated in the Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than seven days (including day and evening hours, and including overnight closures if on a residential street)? 3. Would in-street construction activities result in the loss of regular vehicle, bicycle, or pedestrian access, including loss of existing bicycle parking to an existing land use for more than one day, including day and evening hours and overnight closures if access is lost to residential units? 4. Would in-street construction activities result in the loss of regular ADA pedestrian access to an existing transit station, stop, or facility (e.g., layover zone) during revenue hours? 5. Would in-street construction activities result in the temporary loss for more than one day of an existing bus stop or rerouting of a bus route that serves the project site? 6. Would construction activities result in the temporary removal and/or loss of on-street metered parking for more than 30 days? 7. Would the project involve a discretionary action to construct new buildings or additions of more than 1,000 square feet that require access for hauling construction materials and equipment from streets of less than 24-feet wide in a hillside area?	1. Yes 2. No 3. Yes 4. No 5. No 6. Yes 7. No	Yes, see Chapter 4.4

3.5 RESIDENTIAL STREET CUT-THROUGH ANALYSIS		
Land Use Development Projects: If the answer is yes to all of the following questions, further analysis may be required to assess whether the project would negatively affect residential streets: 1. Would the project generate a net increase of 250 or more daily vehicle trips? 2. Does the land use project include a discretionary action that would be under review by the Department of City Planning? In addition, for development projects, when selecting residential street segments for analyses during the transportation assessment scoping process, all of the following conditions must be present: 3. The project is located along a currently congested Boulevard or Avenue and adds trips that may lead to trip diversion to parallel routes along residential Local Streets. The congestion level of the Boulevard or Avenue can be determined based on the estimated peak hour LOS under project conditions of the study intersection(s) (as determined in Section 3.3). LOS E and F are considered to represent congested conditions; 4. The project is projected to add a substantial amount of automobile traffic to the congested Boulevard(s), Avenue(s), or Collector(s) that could potentially cause a shift to alternative route(s); and 5. Nearby local residential street(s) (defined as Local streets as designated in the City's General Plan passing through a residential neighborhood) provide motorists with a viable alternative route. A viable alternative route is defined as one which is parallel and reasonably adjacent to the primary route as to make it attractive as an alternative to the primary route. LADOT has discretion to define which routes are viable alternative routes, based on, but not limited to, features such as geography and presence of existing traffic control devices, etc.	1. Yes 2. Yes 3. No 4. No 5. No	Yes

Appendix C:
Transit Service Schedules

Monday through Friday

Effective Jun 25 2023

Appendix D:
Plans, Programs, Ordinances and Policies Review

Appendix D: Detailed Responses in Support of Determining Potential Conflicts with Adopted Plans, Programs, Ordinances, or Policies

Per the TAG, the following questions help address potential conflicts with the identified relevant plans, policies, and programs.

Question	Guiding Questions	Relevant Plans, Policies, and Programs	Evaluation
A. Mobility Plan 2035 PROW Classification Standards for Dedications and Improvements			
The following questions address the potential for projects to conflict with or preclude the implementation of the City's Mobility Plan 2035 Street Designations:			
A.1	Does the project include additions or new construction along a street designated as a Boulevard I, and II, and/or Avenue I, II, or III on property zoned for R3 or less restrictive zone?	MP 2.1, 2.3, 3.2, and Mobility Plan 2035 Street Designations and Standard Roadway Dimensions	Yes, the Project will involve new construction along Sunset Boulevard (designated as Avenue I).
A.2	If A.1 is yes, is the project required to make additional dedications or improvements to the Public Right of Way as demonstrated by the street designation?		No, the Project is not required to make additional dedications to the public right-of-way along Sunset Boulevard. There is an existing 100' of right-of-way (50' half right-of-way), which is to standards.
A.3	If A.2 is yes, is the project making the dedications and improvements as necessary to meet the designated dimensions of the fronting street (Boulevard I, and II, or Avenue I, II, or III)?		N/A. The Project is not required to provide dedications along Sunset Boulevard.
A.4	If the answer to A.3. is NO, is the project applicant asking to waive from the dedication standards?		This question is not applicable because the Project application is not requesting to waive from the *Mobility Plan 2035* Street Designations and Standard Roadway Dimensions standards.

Question	Guiding Questions	Relevant Plans, Policies, and Programs	Evaluation
Therefore, the Project would not conflict with the aforementioned Mobility Plan 2035 policies.			
B. Mobility Plan 2035 PROW Policy Alignment with Project-Initiated Changes			
The following questions address the potential for project driveways and public right-of-way improvements to conflict with or preclude the implementation of the City's Mobility Plan 2035 Street Designations and Standard Driveway Dimensions.			
B.1	Does the project physically modify the curb placement or turning radius and/or physically alter the sidewalk and parkways space that changes how people access a property?	MP 2.1, 2.3, 2.10, 3.2, 3.5, 4.1, 5.1, 5.4, and Street Designations and Standard Roadway Dimensions	The Project would maintain the sidewalks around the perimeter of the Project Site and provide pedestrian access points along Sunset Boulevard. The Project would be not preclude or conflict with Mobility Plan 2035 policies, such as: 2.1 Adaptive Reuse of Streets: The Project would not alter adjacent streets or the right-of-way in a manner that would preclude or conflict future changes by various City Departments. 2.3 Pedestrian Infrastructure: The Project would not narrow or remove pedestrian facilities. 2.4 Neighborhood Enhanced Network (NEN): The Project does not front any streets on the NEN. 2.10 Loading Areas: The Project would provide loading spaces on-site. 3.2 People with Disabilities: The Project would be consistent with this policy by maintaining ADA compliance and ensuring that pathways are free of obstacles along the Project frontage. 3.5 Multimodal Features: Sunset Boulevard is part of the Transit Enhanced Network. The Project would support multimodal travel by maintaining the existing sidewalks and providing on-site bike parking. It is also located adjacent to bus stops serving LA Metro Line 4, which provides frequent all-day service, seven days a week. 3.8 Bicycle Parking: The Project supports this policy by providing bicycle parking, including 183 bicycle parking stalls (21 short-term and 162 long-term). 4.1 New Technologies: This policy supports new technology systems and infrastructure to expand access to transportation choices. The Project does not propose elements that would limit or preclude the City's ability to offer or introduce new technology systems or infrastructure. 5.1 Sustainable Transportation: As mentioned for policies 3.5 and 3.8, the Project would encourage the development of a sustainable transportation system with its provision of bicycle parking and proposed development near transit. 5.4 Clean Fuels and Vehicles: The Project will provide 77 EV parking spaces, approximately 30% of new construction total. This investment in zero-emissions vehicle infrastructure supports a reduction in local air pollution, including exposure to pedestrians around the Project Site.

Question	Guiding Questions	Relevant Plans, Policies, and Programs	Evaluation
B.2	Does the project add new driveways along a street designated as an Avenue or a Boulevard that conflict with LADOT's Driveway Design Guidelines?	MP 2.10, PL.1, CDG 2,	Mobility Plan 2035 policy PL.1 encourages vehicular access from non-arterial streets (or alleys) and redesigning access points to be more pedestrian friendly. The Project provides vehicular access off Sunset Boulevard (Avenue I). Access is provided along Sunset Boulevard due to the Project Site only having street frontage along Sunset Boulevard due to topographical constraints. The Project would reduce the number of driveways from 13 to three. Driveways would comply with all driveway design guidelines and intersect at right angles.

Question	Guiding Questions	Relevant Plans, Policies, and Programs	Evaluation
B.2.1	Would the physical changes in the public right of way or new driveways that conflict with LADOT's *Driveway Design Guidelines* degrade the experience of vulnerable roadway users such as modify, remove, or otherwise negatively impact existing bicycle, transit, and/or pedestrian infrastructure?	*Mobility Plan 2035*: Transit Enhanced Network, Bicycle Enhanced Network, Bicycle Lane Network, Pedestrian Enhanced District, Neighborhood Enhanced Network, High Injury Network, TOC Guidelines	No, the physical changes in the public right-of-way would not degrade the experience of vulnerable roadway users. While the Project's driveways would be located on Sunset Boulevard, the Project would reduce the number of driveways from 13 to three. The Project does not propose to shift or narrow sidewalks and will provide pedestrian access points along Sunset Boulevard. The Project also includes on-site bike parking such that the Project will be supportive of and not preclude or conflict with *Mobility Plan 2035* Policies such as: Pedestrian Infrastructure: *Mobility Plan 2035* identifies Pedestrian Enhanced Districts (PED) where initial analysis suggests arterials can be improved and further analysis and prioritization would occur as funding and projects become available. Sunset Boulevard near the Project Site is part of the PED. Neighborhood Enhanced Network: The Neighborhood Enhanced Network (NEN) is a selection of local streets to provide comfortable and safe routes for localized travel of slower-moving modes, such as walking or biking. The Project does not front any NEN streets, therefore it would not preclude the City from enacting future NEN projects. Transit Network: This policy identifies specific streets as part of the Transit Enhanced Network (TEN) to receive improvements that enhance the performance and reliability of existing and future bus services. Sunset Boulevard is part of the TEN. The Project would not preclude the City's ability to enhance transit performance and reliability along this street. Bicycle Networks: This policy establishes a Bicycle Enhanced Network (BEN), which is comprised of protected bicycle lanes and bicycle paths, to provide bikeways for a variety of users. Sunset Boulevard along the Project Site is part of the BEN. Vision Zero: The Project Site is located along Sunset Boulevard, which is identified as part of the City's High-Injury Network (HIN). The Project would not conflict with the implementation of future Vision Zero projects in the public right-of-way. Transit Oriented Community: The Transit-Oriented Community (TOC) guidelines define parameters of housing incentives based on considerations such as proximity to high-quality transit, type of housing, and the land uses being replaced. The Project is in a Tier 2 TOC zone. A Tier 2 TOC zone is defined as within 2640 feet of an intersection between a regular bus line and a rapid bus line, each running every 15 minutes or better during the peak periods, as defined by LADOT. The Project is served by bus lines along Sunset Boulevard, Temple Street, and Figueroa Street.

Question	Guiding Questions	Relevant Plans, Policies, and Programs	Evaluation
B.2.2	Would the physical modifications or new driveways that conflict with LADOT's Driveway Design Guidelines preclude the City from advancing the safety of vulnerable roadway users?		No, the Project's driveways on Sunset Boulevard would not conflict with driveway design guidelines and thus would not preclude the City from advancing the safety of vulnerable roadway users. The Project would reduce the number of driveways from 13 to three. The Project proposes to add the fourth west-facing leg to the signalized intersection of Sunset Boulevard and Marion Avenue.
Therefore, the Project's proposed driveways would not conflict with the aforementioned Mobility Plan 2035 and LADOT policies.			
C. Network Access			
The following questions address the potential for projects to conflict with established Mobility Plan 2035 policies to preserve and/or enhance street network access.			
C1.1	Does the project propose to vacate or otherwise restrict public access to a street, alley, or public stairway?	MP 3.9	The Project does not propose to vacate or otherwise restrict public access to a street, alley, or public stairway. Public access to, from, and within the Project Site will be maintained and enhanced for pedestrian connectivity.
C.1.2	If the answer to C.1.1 is Yes, will the project provide or maintain public access to people walking and biking on the street, alley, or stairway?		This question is not applicable, as the Project does not propose to vacate or otherwise restrict public access to a street, alley, or public stairway. Therefore, the Project does not conflict with this policy.
C.2.1	Does the project create a cul-de-sac or is the project located adjacent to an existing cul-de-sac?	MP 3.10	No, the Project does not create a cul-de-sac nor is it located adjacent to an existing cul-de-sac.
C.2.2	If yes, will the cul-de-sac maintain convenient and direct public access to people walking and biking to the adjoining street network?		This question is not applicable as the Project does not propose creating a new cul-de-sac and is not located adjacent to an existing cul-de-sac. Therefore, the Project does not conflict with this policy.
Therefore, the Project would not conflict with these policies by reducing public street access.			

Question	Guiding Questions	Relevant Plans, Policies, and Programs	Evaluation
D. Parking Supply and Transportation Demand Management			
The following questions address the potential for projects' parking supply to conflict with established Mobility Plan 2035 goals.			
D.1	Would the project propose a supply of onsite parking that exceeds the baseline amount as required in the Los Angeles Municipal Code or a Specific plan, whichever requirement prevails?	MP 3.8, 4.8, 4.13	4.13 Parking and Land Use Management: The objective of this policy is to balance parking supply with other transportation and land use objectives. The policy states that an oversupply of parking can undermine broader regional goals of creating vibrant public spaces and a robust multimodal transportation system; that an abundance of free parking incentivizes automobile trips and makes alternative modes of transportation less attractive; and that large parking lots consume land that could be used for other valuable uses and discourage walking by increasing the distance between services and facilities. Per LAMC baseline requirements, the Project would be required to provide 621 vehicle parking stalls. After factoring in AB 2097[2] parking reduction provisions, the Project is required to provide zero (0) parking stalls. The Project proposes to provide 263 parking stalls located in three separate parking structures – 58% less than the LAMC baseline. Therefore, the Project would not provide onsite parking that exceeds baseline LAMC code requirements and does not conflict with this policy. The Project does not conflict with the portion of MP 4.13 that discourages utilizing land for parking that could have been used for other valuable uses since the parking supply does not exceed the baseline amount and would be located in a subterranean and above-ground garage. Therefore, the Project does not contribute to an abundance of freely available public parking and does not conflict with this policy. The Project includes features to encourage walking and bicycling, including providing 183 bike stalls with 21 of them being short-term and 162 of them being long-term. Additionally, the Project would be consistent with the applicable goals and objectives of the SCAG 2020-2045 RTP/SCS (SCAG, 2020) to locate jobs and housing in infill locations served by public transportation and facilitating active transportation. Therefore, the Project would not undermine broader regional goals of creating vibrant public spaces and a robust multimodal transportation system, and would not conflict with this policy.

Question	Guiding Questions	Relevant Plans, Policies, and Programs	Evaluation
D.2	If the answer to D.1. is YES, would the project propose to actively manage the demand of parking by independently pricing the supply to all users (e.g., parking cash-out), or for residential properties, unbundle the supply from the lease or sale of residential units?		Not applicable. The Project does not propose a parking supply that exceeds baseline code requirements. Therefore, the Project does not conflict with this policy.
D.3	Would the project provide the minimum on- and off-site bicycle parking spaces as required by Section 12.21 A.16 of the LAMC?		3.8 Bicycle Parking: The Project would provide on-site bicycle parking consistent with the City's Bicycle Parking Ordinance. The Project will provide a total of 183 bike stalls with 21 of them being short-term and 162 of them being long-term.
D.4	Does the Project include more than 25,000 square feet of gross floor area construction of new non-residential gross floor?		No, the Project would not include more than 25,000 square feet of gross floor area construction of new non-residential gross floor. Therefore, this criterion does not apply
D.5	If the answer to D.4. is YES, does the project comply with the City's TDM Ordinance in Section 12.26 J of the LAMC?		Not applicable. The Project would not need to comply with the City's TDM Ordinance.
Therefore, the Project's proposed parking supply does not conflict with the aforementioned Mobility Plan 2035 policies.			
E. Consistency with Regional Plans			
The following questions address the potential for projects to conflict with the SCAG Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS).			
E.1	Does the Project or Plan apply one of the City's efficiency-based impact thresholds (i.e., VMT per capita, VMT per employee, or VMT per service population) as discussed in Section 2.2.3 of the TAG?		Yes, the Project applies the City's efficiency-based impact thresholds of VMT per capita.

Question	Guiding Questions	Relevant Plans, Policies, and Programs	Evaluation
E.2	E.2 If the Answer to E.1 is YES, does the Project or Plan result in a significant VMT impact?		No, the Project would not result in a significant VMT impact, per the LA VMT Calculator and significance thresholds.
E.3	If the Answer to E.1 is NO, does the Project result in a net increase in VMT?		Not applicable. The Project does not propose regionally serving uses that would result in a new increase in VMT.
E.4	If the Answer to E.2 or E.3 is YES, then further evaluation would be necessary to determine whether such a project or land use plan would be shown to be consistent with VMT and GHG reduction goals of the SCAG RTP/SCS		Not applicable. The Project would not result in a significant VMT impact and is presumed to be consistent with VMT and GHG reduction goals in the SCAG RTP/SCS.
Therefore, the Project would not conflict with the SCAG RTP/SCS.			

Notes:

1. Adapted from Attachment D: Plan Consistency Worksheet in the *Transportation Analysis Guidelines*, LADOT, August 2022.
2. Assembly Bill 2097, which came into effect January 2023, prohibits public agencies from imposing minimum automobile parking requirements on most development projects located within a ½ mile radius of a major transit stop. Because the Project is located within a ½ mile radius of frequent bus service along Sunset Boulevard and would not be providing lodging uses, no automobile parking is required.

Version 1.3

TDM Strategy Inputs

Strategy Type		Description	Proposed Project	Mitigations
Parking	Reduce parking supply	City code parking provision (spaces)	621	621
		Actual parking provision (spaces)	263	263
	Unbundle parking	*Monthly cost for parking ($)*	*$0*	*$0*
	Parking cash-out	*Employees eligible (%)*	*0%*	*0%*
	Price workplace parking	*Daily parking charge ($)*	*$0.00*	*$0.00*
		Employees subject to priced parking (%)	*0%*	*0%*
	Residential area parking permits	*Cost of annual permit ($)*	*$0*	*$0*

(cont. on following page)

TDM Strategy Inputs, Cont.

Strategy Type		Description	Proposed Project	Mitigations
Transit	*Reduce transit headways*	*Reduction in headways (increase in frequency) (%)*	*0%*	*0%*
		Existing transit mode share (as a percent of total daily trips) (%)	*0%*	*0%*
		Lines within project site improved (<50%, >=50%)	*0*	*0*
	Implement neighborhood shuttle	*Degree of implementation (low, medium, high)*	*0*	*0*
		Employees and residents eligible (%)	*0%*	*0%*
	Transit subsidies	*Employees and residents eligible (%)*	*0%*	*0%*
		Amount of transit subsidy per passenger (daily equivalent) ($)	*$0.00*	*$0.00*
Education & Encouragement	*Voluntary travel behavior change program*	*Employees and residents participating (%)*	*0%*	*0%*
	Promotions and marketing	Employees and residents participating (%)	100%	100%

(cont. on following page)

TDM Strategy Inputs, Cont.

Strategy Type		Description	Proposed Project	Mitigations
Commute Trip Reductions	*Required commute trip reduction program*	*Employees participating (%)*	*0%*	*0%*
	Alternative Work Schedules and Telecommute	*Employees participating (%)*	*0%*	*0%*
		Type of program	*0*	*0*
	Employer sponsored vanpool or shuttle	*Degree of implementation (low, medium, high)*	*0*	*0*
		Employees eligible (%)	*0%*	*0%*
		Employer size (small, medium, large)	*0*	*0*
	Ride-share program	*Employees eligible (%)*	*0%*	*0%*
Shared Mobility	*Car share*	*Car share project setting (Urban, Suburban, All Other)*	*0*	*0*
	Bike share	*Within 600 feet of existing bike share station - OR- implementing new bike share station (Yes/No)*	*0*	*0*
	School carpool program	*Level of implementation (Low, Medium, High)*	*0*	*0*

(cont. on following page)

TDM Strategy Inputs, Cont.

Strategy Type		Description	Proposed Project	Mitigations
Bicycle Infrastructure	*Implement/Improve on-street bicycle facility*	*Provide bicycle facility along site (Yes/No)*	*0*	*0*
	Include Bike parking per LAMC	Meets City Bike Parking Code (Yes/No)	Yes	Yes
	Include secure bike parking and showers	*Includes indoor bike parking/lockers, showers, & repair station (Yes/No)*	*0*	*0*
Neighborhood Enhancement	*Traffic calming improvements*	*Streets with traffic calming improvements (%)*	*0%*	*0%*
		Intersections with traffic calming improvements (%)	*0%*	*0%*
	Pedestrian network improvements	*Included (within project and connecting off-site/within project only)*	*0*	*0*

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary	
HCM 6th Ctrl Delay	67.7
HCM 6th LOS	E

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
