EXECUTIVE SUMMARY

Farallon Consulting, L.L.C. (Farallon) has prepared this Phase I Environmental Site Assessment (Phase I ESA) Report for the property at 1055 Commercial Court in San Jose, California (herein referred to as the Site). The Phase I ESA was conducted by Messrs. Ryan Charney and Gavin Polite Fisco and was reviewed and approved by Mr. Scott Allin. Messrs. Fisco and Allin are experienced Environmental Professionals in the field of Phase I ESAs and related environmental investigations.

This Phase I ESA Report was prepared for Prologis, Inc. (Prologis) in accordance with the letter regarding 1055 Commercial Ct, San Jose, CA Engagement Letter (the “Engagement Letter”) dated April 5, 2019 from Mr. Ty Wiest of Prologis to Mr. Allin of Farallon. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13). ASTM E1527-13 is intended to assist the user in satisfying one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code.

There were no deviations from ASTM E1527-13 during this Phase I ESA, with the exception of additional environmental services requested by Prologis. Limiting conditions encountered during this Phase I ESA were the presence of vehicles and equipment on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in Site buildings that prevented Farallon from observing entire interior floor surfaces. In addition, Farallon was not provided access to all areas of tenant portions of the Site. Based on information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

The purpose of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site or proximate to the Site that have caused and/or may cause an adverse environmental condition. This Phase I ESA Report provides the results from investigation into past and present ownership and uses of the Site, consistent with good commercial and/or customary practice.

The Site consists of Santa Clara County Parcel Nos. 241-10-002 and 241-10-003, which total approximately 9.25 acres of land developed with several small warehouse, office, and maintenance structures that were constructed in stages between approximately 1973 and 2005. Remaining areas of the Site consist of unpaved parking and storage areas, gravel areas, concrete-paved areas, and landscaped areas. Access to the Site is gained from Commercial Court, south of the Site.

At the time of Farallon's site reconnaissance, the Site was occupied by the following tenants: Pick-N-Pull, Allied Trenching, Vintage Tile, Peninsula Sandblasting, Davey Tree, King Crane, and WM O'Neill.

- Pick-N-Pull occupies the southern portion of the Site and operates a recycled auto parts salvage yard;
- Allied Trenching occupies the east-central portion of the Site and uses the area for equipment storage;
- Vintage Tile occupies the northeastern portion of the Site and uses the area for equipment storage;
- Peninsula Sandblasting occupies the north-central portion of the Site and uses the area for equipment storage;
- Davey Tree occupies the northwestern portion of the Site and uses the area for equipment storage and office space;
- King Crane occupies the west-central portion of the Site and uses the warehouse and surrounding area for equipment storage; and
- WM O'Neill occupies the northern portion of the Site and uses the area for equipment storage.

Historically, the Site appeared to be developed for agricultural use from at least 1939 to the 1950s, at which time the Site appeared to be developed for commercial and/or industrial use. The current Site buildings were first visible by 1974. The northwestern corner of the Site appeared to be used for green waste recycling from approximately 2006 to 2010. City directory listings for the Site address included various commercial and industrial companies beginning in 1998, and included Beck's Property from approximately 2006 to 2010, and Davey Tree Expert Company from approximately 2003 to the present. Pick-N-Pull was listed at 1065 Commercial Street from approximately 2003 to the present, but in fact is a tenant at the Site address.

Farallon was provided with the *Phase I Environmental Site Assessment, 1055 Commercial Court, San Jose, California 95112* report dated May 25, 2017 prepared for the Site by ERAS Environmental, Inc. (2017 Phase I Report). According to the 2017 Phase I Report, multiple industrial/commercial tenants have occupied the Site from the 1970s to the present, with no evidence indicating that their activity contributed to contamination of the Site. The occupants of the Site at the time of the 2017 Phase I Report were similar to those of the present. The 2017 Phase I Report concluded that the automotive wrecking yard and other commercial operations at the Site used hazardous materials in accordance with regulations, and as such represented a de minimis condition in connection with the Site. The 2017 Phase I Report did not identify recognized environmental conditions in connection with the Site, and recommended no further investigation or other activities pertaining to subsurface environmental conditions at the Site.

During the performance of its Phase I ESA, Farallon identified several potential environmental concerns in connection with the Site. In response, Farallon was contracted to conduct a Phase II ESA at the Site (2019 Phase II ESA), summarized in the letter regarding Phase II Environmental Site Assessment Findings, 1055 Commercial Court, San Jose, California dated August 1, 2019 from Messrs. Allin and Fisco of Farallon to Mr. Robert L. Young of Berding & Weil LLP. The following potential environmental concerns were investigated during the 2019 Phase II ESA:

- **Former Landfill Operations:** The Site historically was occupied by Beck's Property, which was identified in the Environmental Risk Information Services (ERIS) *Database Report* prepared for the Site dated April 12, 2019 (ERIS Report) on the Solid Waste Information System (SWF/LF) database as a landfill for wood waste and green materials for chipping and grinding operations from approximately 2006 to 2010. In aerial photographs reviewed for this time period, landfill operations appeared to have been restricted to the northwestern portion of the Site. Landfill operations have the potential to impact the Site from unknown contaminants in waste brought to the landfill, including volatile organic compounds, petroleum hydrocarbons, polychlorinated biphenyls, polycyclic aromatic hydrocarbons, and pesticides.
- **Vehicle Maintenance Areas:** Multiple vehicle maintenance areas were identified during the site reconnaissance, including storage areas for hazardous materials such as petroleum products, automotive fluids, and motor oil. Farallon observed poor housekeeping practices, staining, and unlabeled drums and containers during the site reconnaissance.
- **Chemical Storage Areas:** The Site is occupied by commercial and industrial tenants that use hazardous materials, including paints, pesticides, degreasers, automotive fluids, and motor oil, in their operations and have received notices of minor violations from the environmental health department regarding poor housekeeping.
- **Auto Reclamation Area:** The southern portion of the Site is occupied by Pick-N-Pull, a recycled auto parts salvage yard. During the site reconnaissance, Farallon observed cars in poor condition, petroleum staining, and several aboveground storage tanks and drums used for storing waste automotive fluids, situated on unpaved surfaces throughout the salvage yard.
- **Potential Environmental Impacts to the Site from the Application of Pesticides and Other Chemicals in Connection with Former Agricultural Uses:** Based on historical aerial photographs, the Site appeared to have been used for agricultural operations as late as 1960. Agricultural lands are known to involve use of pesticides and herbicides.

The 2019 Phase II ESA included collection of soil and/or reconnaissance groundwater samples from 19 locations for laboratory analysis. Various industrial constituents were detected at concentrations exceeding regulatory guidelines for unrestricted land use in soil and groundwater. The conclusion from the Phase II ESA was that analytical results suggest that one or more releases of industrial constituents from historical operations occurred at the Site. Data also suggest the potential for contribution to the identified impact to groundwater by surrounding property releases.

Adjacent properties at the time of Farallon's site reconnaissance consisted of industrial and commercial facilities to the southeast, south and west; a mobile home park to the north; and Coyote Creek to the north and northeast. Historically, adjacent properties appeared to be developed for agricultural use from at least 1939 to the 1950s. By 1960, adjacent properties appeared developed for industrial, commercial, and residential use. City directory listings for adjacent properties included various industrial, commercial, and residential listings from 1957 to 2019.

The ERIS Report identified the Site address in several databases, including the SWF/LF (landfill) database for chipping and grinding operations, and identified minor historical hazardous material release incidents for the Site. Based on the described volume and nature of the releases and the absence of indicated regulatory follow-up requirements, the historical release incidents are considered de minimis conditions for the Site.

As part of this Phase I ESA, Farallon searched the California State Water Resources Control Board online GeoTracker database and the California Department of Toxic Substances Control online EnviroStor database for records related to the Site, but found no listings.

Based on review of the Site history, interviews with persons knowledgeable about the Site, reconnaissance of the Site and adjacent properties, and review of regulatory agency lists, this Phase I ESA identified the following recognized environmental condition in connection with the Site:

- The presence of industrial constituents in soil and groundwater apparently originating from historical Site and surrounding land use.

At the request of Prologis, Farallon has included additional opinions and recommendations for the Site beyond those specified in ASTM E1527-13 for de minimis and recognized environmental conditions. Based on the findings from this Phase I ESA, additional investigation is recommended to fully characterize the Site due to concentrations of industrial constituents detected in Site soil and groundwater.

1.0 INTRODUCTION

This Phase I Environmental Site Assessment (Phase I ESA) Report was prepared by Farallon Consulting, L.L.C. (Farallon) for the property at 1055 Commercial Court in San Jose, California (herein referred to as the Site) (Figure 1). This section discusses the project authorization, and the qualifications of the Environmental Professionals conducting and reviewing the Phase I ESA work. Also included in this section are the project purpose, objective, scope of services, deviations, limiting conditions, and data gaps.

1.1 PROJECT AUTHORIZATION

This Phase I ESA Report was prepared for Prologis, Inc. (Prologis) in accordance with the letter regarding 1055 Commercial Ct, San Jose, CA Engagement Letter (the “Engagement Letter”) dated April 5, 2019 from Mr. Ty Wiest of Prologis to Mr. Scott Allin of Farallon. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13).

1.2 PROFESSIONAL QUALIFICATIONS

The Phase I ESA was conducted by Messrs. Ryan Charney and Gavin Polite Fisco and was reviewed and approved by Mr. Allin. Messrs. Fisco and Allin have an understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions, and the ability to develop opinions regarding conditions indicative of a release or threatened release of hazardous substances and petroleum products. These Environmental Professionals have developed and performed all appropriate inquiry, in conformance with the standards and practices set forth in Part 312 of Title 40 of the Code of Federal Regulations. The professional qualifications of Messrs. Fisco and Allin are provided in Appendix A.

1.3 PROJECT PURPOSE AND OBJECTIVE

The purpose of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site and within the appropriate study area that have caused and/or may cause an adverse environmental impact. ASTM E1527-13 is intended to permit a user to satisfy one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code.

The objective of the Phase I ESA was to perform an appropriate inquiry into past and present ownership and uses of the Site, consistent with good commercial and/or customary practice. This Phase I ESA Report is to be used as a risk management tool to meet all appropriate inquiry

requirements and the Comprehensive Environmental Response, Compensation, and Liability Act liability defense. The Phase I ESA does not guarantee that there are no impacts to the Site.

For the purpose of this Phase I ESA Report, the term “recognized environmental condition” is defined as the presence or likely presence of any hazardous substance or petroleum product in, on, or at the Site due to releases to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The term is not intended to include “de minimis conditions” that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the applicable governmental agencies.

The term “controlled recognized environmental condition” is defined as a recognized environmental condition resulting from a past release of a hazardous substance or petroleum product that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in-place subject to implementation of required controls.

The term “historical recognized environmental condition” is defined as a past release of any hazardous substance or petroleum product that has occurred in connection with the Site and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the Site to any required controls.

1.4 PROJECT SCOPE OF SERVICES

This Phase I ESA Report has been prepared in accordance with the scope of work presented in the letter regarding 1055 Commercial Ct, San Jose, CA Engagement Letter (the “Engagement Letter”) dated April 5, 2019 from Mr. Wiest of Prologis to Mr. Allin of Farallon, and the *Master Services Agreement* between Prologis and Farallon dated August 4, 2011.

The scope of work for this Phase I ESA included a records review, literature research and review, a site reconnaissance, interviews with individuals familiar with the Site, interviews with local governmental officials, and preparation of this report.

At the request of Prologis, Farallon provided additional environmental services and recommendations for further action based on the findings of the Phase I ESA. These services are considered non-scope items and are not required to satisfy ASTM E1527-13.

1.5 DEVIATIONS

There were no deviations from ASTM E1527-13 during this Phase I ESA, with the exception of the additional environmental services requested by Prologis.

1.6 LIMITING CONDITIONS

Limiting conditions encountered during this Phase I ESA were the presence of vehicles and equipment on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in Site buildings that prevented Farallon from observing entire interior floor surfaces. In addition, Farallon was not provided access to all areas of tenant portions of the Site. Based on information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

1.7 DATA GAPS

Data gaps may affect the ability to identify recognized environmental conditions and Farallon's ability to render opinions and conclusions for presentation in the Phase I ESA Report. Farallon did not identify significant data gaps during this Phase I ESA.

2.0 SITE OVERVIEW

This section includes an overview of the Site location, improvements, and operations. A description of adjacent and surrounding land use also is provided.

2.1 SITE LOCATION

The Site is at the terminus of Commercial Court, at 1055 Commercial Court in San Jose, Santa Clara County, California (Figure 1). The location is in a mixed commercial, residential, and industrial area approximately 3 miles north of downtown of San Jose.

2.2 SITE DESCRIPTION

The Site consists of Santa Clara County Parcel Nos. 241-10-002 and 241-10-003, which total approximately 9.25 acres of land developed with several small warehouse, office, and maintenance structures that were constructed in stages between approximately 1973 and 2005. Remaining areas of the Site consist of unpaved parking and storage areas, gravel areas, concrete-paved areas, and landscaped areas. Access to the Site is gained from Commercial Court, south of the Site.

Figure 2 presents a plan map of the Site. Additional details pertaining to the Site are provided in Section 8.2, Site Reconnaissance Observations. Site photographs are presented in Appendix B.

2.3 SITE OPERATIONS

According to the *Phase I ESA User Questionnaire* (User Questionnaire), the Site owner is Mr. Tom Klauer. At the time of Farallon's site reconnaissance, the Site was occupied by the following tenants: Pick-N-Pull, Allied Trenching, Vintage Tile, Peninsula Sandblasting, Davey Tree, King Crane, and WM O'Neill.

- Pick-N-Pull occupies the southern portion of the Site and operates a recycled auto parts salvage yard that involves operations such as vehicle maintenance and vehicle fluid removal, and hazardous material and petroleum product use and storage using several on-Site drums and ASTs;
- Allied Trenching occupies the east-central portion of the Site and uses the area for equipment storage;
- Vintage Tile occupies the northeastern portion of the Site and uses the area for equipment storage;
- Peninsula Sandblasting occupies the north-central portion of the Site and uses the area for equipment storage;
- Davey Tree occupies the northwestern portion of the Site and uses the area for equipment storage and office space;

- King Crane occupies the west-central portion of the Site and uses the warehouse and surrounding area for equipment storage; and
- WM O'Neill occupies the northern portion of the Site and uses the area for equipment storage.

Historically, the Site was occupied by Beck's Property and was identified in documents reviewed as a landfill for wood waste and green materials for chipping and grinding operations from approximately 2006 to 2010. A Site plan depicting the Site boundary and current features is provided as Figure 2.

2.4 ADJACENT AND SURROUNDING LAND USE

Adjacent properties at the time of Farallon's site reconnaissance consisted of industrial and commercial facilities to the southeast, south, and west; a mobile home park to the north; and Coyote Creek to the north and northeast.

Car-crushing processes were observed on the south-adjacent property. According to the Site representative, all removal of hazardous fluids is conducted in the fluid-removal structure on the Site; cars are only crushed and stored on the south-adjacent property pending disposal off the property. No evidence of a hazardous material released was observed.

3.0 PHYSICAL SETTING

The physical setting of the Site, including topography, geology, and hydrogeology, is described in this section. Farallon's assessment of sensitive receptors in the area also is discussed.

3.1 TOPOGRAPHY

Farallon reviewed the U.S. Geological Survey (USGS) topographic map for San Jose West and San Jose, California dated 2015 provided by Environmental Risk Information Services (ERIS). The map depicts the Site at an elevation of approximately 70 feet above mean sea level. The Site topography is relatively flat. Regional topography is generally flat, with a slight slope down to the north to northeast.

3.2 GEOLOGY AND HYDROGEOLOGY

The Site is in the central portion of the Santa Clara Valley, a southeast-trending structural depression in the southern San Francisco Bay area of California. The main water bodies in the Santa Clara Valley are the San Francisco Bay and Coyote Creek. The Santa Clara Valley is characterized as quaternary alluvium and marine deposits from alluvium, lake, playa, and terrace deposits. Alluvial deposits range in age from the Pliocene epoch to the Holocene epoch. According to the ERIS *Physical Setting Report* prepared for the Site dated April 10, 2019 (ERIS PSR), surface soil at the Site consists primarily of fine sandy loam to extremely gravelly sandy loam.

Shallow groundwater flow direction typically can be estimated by examination of surface topography or by nearby surface water bodies. Based on the topography of the Site and vicinity, groundwater is expected to flow to the northeast toward Coyote Creek. Based on reports available on the California State Water Resources Control Board online GeoTracker database (GeoTracker database), groundwater flow at the Site is variable. For the purposes of this Phase I ESA Report, groundwater has been inferred to flow to the northeast. A prior assessment of the Site identified first-encountered groundwater at depths ranging from 12 to 20 feet below ground surface (bgs).

3.3 OIL AND GAS RECORDS

According to the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources Well Finder online database, no permitted oil or gas wells are on the Site or adjacent properties.

3.4 SENSITIVE RECEPTORS

Farallon conducted a limited assessment of sensitive receptors on or in the vicinity of the Site that was confined to visually apparent features such as surface water bodies (e.g., low-lying wet areas, streams, ponds) and residential and recreational areas. Farallon's assessment of sensitive receptors included a review of readily ascertainable information relating to the presence of private, semi-private, public, and industrial water-supply wells.

According to the ERIS PSR, the Site is in Federal Emergency Management Agency Flood Hazard Zone D-01, an area with possible but undetermined flood hazards. According to the U.S. Fish & Wildlife Service National Wetlands Mapper, the nearest federally designated wetlands are approximately 175 feet northeast of the Site. According to the GeoTracker database, five public water system wells are present approximately 0.75 miles northeast of the Site. The water body nearest the Site was identified as Coyote Creek, approximately 175 feet northeast of the Site.

4.0 USER-PROVIDED INFORMATION

Farallon understands that the user of this report, Prologis, is seeking to follow the standards set forth in ASTM E1527-13 to complete an environmental assessment of the Site. The user has specific responsibilities for fulfilling ASTM E1527-13 requirements to help identify the possibility of recognized environmental conditions in connection with the Site. These responsibilities do not require the technical expertise of an Environmental Professional, and were not performed by the Environmental Professional who conducted the Phase I ESA at the Site.

To facilitate fulfillment of the ASTM E1527-13 requirements identified below, Farallon provided Prologis with a copy of the User Questionnaire to complete. The User Questionnaire is provided in Appendix C of this Phase I ESA Report.

4.1 TITLE AND LIEN RECORDS

Prologis indicated that it was not aware of environmental liens against the Site.

4.2 EXPERIENCE AND SPECIALIZED KNOWLEDGE

Prologis indicated that it has no experience or specialized knowledge regarding the Site.

4.3 COMMONLY KNOWN INFORMATION

Prologis indicated that it is not aware of commonly known information that would lead to identification of recognized environmental conditions in connection with the Site.

4.4 PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT USERS

Prologis will rely on this Phase I ESA Report.

4.5 PREVIOUS ENVIRONMENTAL STUDIES

Farallon was provided with the *Phase I Environmental Site Assessment, 1055 Commercial Court, San Jose, California 95112* report dated May 25, 2017 prepared for the Site by ERAS Environmental, Inc. (2017 Phase I Report). According to the 2017 Phase I Report, multiple industrial/commercial tenants have occupied the Site from the 1970s to the present, with no evidence indicating that their activity contributed to contamination of the Site. The occupants of the Site at the time of the 2017 Phase I Report were similar to those of the present. The Phase I Report concluded that the automotive wrecking yard and other commercial operations used hazardous materials in accordance with regulations and as such represented a de minimis condition in connection with the Site. The 2017 Phase I Report did not identify recognized environmental conditions in connection with the Site, and recommended no further investigation or other activities pertaining to subsurface environmental conditions at the Site.

During the performance of its Phase I ESA, Farallon identified several potential environmental concerns in connection with the Site. In response, Farallon was contracted to conduct a Phase II ESA at the Site (2019 Phase II ESA), summarized in the letter regarding Phase II Environmental Site Assessment Findings, 1055 Commercial Court, San Jose, California dated August 1, 2019, from Messrs. Allin and Fisco of Farallon to Mr. Robert L. Young of Berding & Weil LLP. A copy of letter is provided in Appendix D. The following potential environmental concerns were further investigated during the 2019 Phase II ESA:

- **Former Landfill Operations:** The Site historically was occupied by Beck's Property, which was identified in the *ERIS Database Report* prepared for the Site dated April 12, 2019 on the Solid Waste Information System (SWF/LF) database as a landfill for wood waste and green materials for chipping and grinding operations from approximately 2006 to 2010. In aerial photographs reviewed for this time period, landfill operations appeared to be restricted to the northwestern portion of the Site. Landfill operations have the potential to impact the Site from unknown contaminants in waste brought to the landfill, including volatile organic compounds, petroleum hydrocarbons, polychlorinated biphenyls, polycyclic aromatic hydrocarbons, and pesticides.
- **Vehicle Maintenance Areas:** Multiple vehicle maintenance areas were identified during the site reconnaissance, including storage areas for hazardous materials such as petroleum products, automotive fluids, and motor oil. Farallon observed poor housekeeping practices, staining, and unlabeled drums and containers during the site reconnaissance.
- **Chemical Storage Areas:** The Site is occupied by commercial and industrial tenants that use hazardous materials, including paints, pesticides, degreasers, automotive fluids, and motor oil, in their operations and have received notices of minor violations from the environmental health department regarding poor housekeeping.
- **Auto Reclamation Area:** The southern portion of the Site is occupied by Pick-N-Pull, a recycled auto parts salvage yard. During the site reconnaissance, Farallon observed cars in poor condition, petroleum staining, and several aboveground storage tanks and drums used for storing waste automotive fluids, situated on unpaved surfaces throughout the salvage yard.
- **Potential Environmental Impacts to the Site from the Application of Pesticides and Other Chemicals in Connection with Former Agricultural Uses:** Based on historical aerial photographs, the Site appeared to have been used for agricultural operations as late as 1960. Agricultural lands are known to involve use of pesticides and herbicides.

The 2019 Phase II ESA included collection of soil and/or reconnaissance groundwater samples from 19 locations for laboratory analysis. Various industrial constituents were detected at concentrations exceeding regulatory guidelines for unrestricted land use in soil and groundwater. The conclusion from the Phase II ESA was that analytical results suggest that one or more releases of industrial constituents from historical operations occurred at the Site. Data also suggest the potential for contribution to the identified impact to groundwater by surrounding property releases.

The presence of industrial constituents in soil and groundwater apparently originating from historical Site and surrounding land use represents a recognized environmental condition in connection with the Site.

5.0 SITE BACKGROUND AND HISTORY

Farallon reviewed the following historical sources as part of this Phase I ESA:

- Aerial photographs of the San Jose, California area dated 1939, 1948, 1954, 1960, 1968, 1974, 1981, 1993, 2005, 2006, 2009, 2010, 2012, 2014, and 2016 obtained from ERIS; and dated 1994 through 2019 obtained from Google Earth;
- Digital Business, Haines, and Street Address Directories of San Jose, California dated 1957, 1961, 1966, 1971, 1976, 1981, 1987, 1990-1991, 1995-1996, 1998, 2003, 2008, 2013, and 2018 obtained from ERIS; and
- USGS topographic maps of San Jose, California dated 1889, 1897, 1899, 1953, and 1961; and of San Jose West, California dated 1953, 1961, 1968, 1973, 1980, and 2015, all obtained from ERIS.

A search for fire insurance maps resulted in notification that there was no coverage for the Site.

Farallon is not responsible for the accuracy or completeness of the historical sources reviewed. The historical sources documented were reasonably ascertainable and practically reviewable during this Phase I ESA.

5.1 SITE

The Site appeared to be developed for agricultural use from at least 1939 to the 1950s, at which time the Site appeared to be developed for commercial and/or industrial use. The current Site buildings were first visible by 1974. The northwestern corner of the Site appeared to be used for green waste recycling from approximately 2006 to 2010. City directory listings for the Site address included various commercial and industrial companies beginning in 1998, including Beck's Property from approximately 2006 to 2010, and Davey Tree Expert Company from approximately 2003 to the present. Pick-N-Pull was listed at 1065 Commercial Street from approximately 2003 to the present, but in fact is a tenant at the Site address. Additional information regarding the Site is provided in Section 6.1, On-Site Listings.

5.2 ADJACENT PROPERTIES

Adjacent properties appeared to be developed for agricultural use from at least 1939 to the 1950s. By 1960, adjacent properties appeared developed for industrial, commercial, and residential use. City directory listings for adjacent properties included various industrial, commercial, and residential listings from 1957 to 2019. Additional information regarding adjacent properties is provided in Section 6.2, Adjacent and Other Facility Listings.

6.0 REGULATORY REVIEW

ERIS conducted a review of environmental regulatory agency database listings to identify reported environmental issues related to the Site and facilities in the Site vicinity. Farallon used the greater of each approximate minimum search distance from the Site for each of the referenced federal and state environmental databases, as specified in ASTM E1527-13.

Farallon reviewed the results from the ERIS *Database Report* prepared for the Site dated April 12, 2019 (ERIS Report) to note reported facilities in the vicinity of the Site that were considered to have a potential to adversely impact the Site (i.e., are known to have resulted in or are expected to result in a recognized environmental condition). Reported facilities identified in the ERIS Report were evaluated with respect to the nature and extent of a given release, the distance of the reported facility from the Site, the stratigraphy of soil, the expected soil permeability, and the location of a reported facility with respect to known or expected local and/or regional groundwater flow direction.

The descriptions of the databases searched, the complete database names for the abbreviations used in this Phase I ESA Report, and the associated search distances from the Site are provided in the ERIS Report presented in Appendix E. Conclusions regarding on-Site listings are provided at the end of the section.

6.1 ON-SITE LISTINGS

- **Davey Tree Expert Company** at 1055 Commercial Ct, located on the Site, was identified in the CERS HAZ, SANTA CLARA CUPA, FINDS/FRS, SANJOSE HM, HAZNET, and RCRA NON GEN databases. The ERIS Report identified the facility as containing hazardous materials such as unspecified oil-containing waste in 1998. The facility received several notices of violation that were administrative in nature in March 2014 and November 2018, which were addressed to the satisfaction of the regulatory agency.
- **Pick and Pull Auto Dismantlers** at 1055 Commercial Ct, located on the Site, was identified in the CHMIRS database. According to the ERIS Report, the facility had a petroleum spill of approximately 12 gallons in July 2016. No other information regarding the incident was located.
- **Cintas Document Management Inc** at 1055 Commercial Ct Ste A, located on the Site, was identified in the HAZNET database; no information regarding the type of waste generated was provided.
- **Certified Document Destruction Inc** at 1055 Commercial Ct, located on the Site, was identified in the HAZNET database. This facility generated 0.2919 ton of unspecified oil-containing waste in 2005.

- **Ross Equipment Repair** at 1055 Commercial Ct, located on the Site, was identified in the HAZNET database. This facility generated photochemicals/photo processing waste, aqueous solution with total organic residues of less than 10 percent, unspecified organic liquid mixture, and unspecified oil-containing waste between 1993 and 2003. No violations were indicated in the ERIS Report.
- **Beck's Property and Tree Service** at 1055 Commercial [sic] Ct, Lot E, located on the Site, was identified in the SWF/LF database. The ERIS Report identified the facility as a chipping and grinding activity facility and operation that accepted green materials and wood waste. This facility is no longer a tenant at the Site. Historical use of the Site by this facility is discussed further in Section 4.5, Previous Environmental Studies.

The On-Site listings above do not represent specific recognized environmental conditions in connection with the Site. However, based on the findings from the 2019 Phase II ESA, use of the Site by one or more of these entities may have contributed to contaminant impact to the Site.

Farallon reviewed the GeoTracker database and the California Department of Toxic Substances Control EnviroStor database (EnviroStor database) for records related to the Site, but found no listings.

6.2 ADJACENT AND OTHER FACILITY LISTINGS

Reported facilities within 0.25 mile up-gradient, 0.125 mile cross-gradient, or adjacent down-gradient of the Site with respect to the assumed groundwater flow direction are considered to have a potential to have impacted the Site. Facilities that were listed in the ERIS Report but not identified as a reported facility (e.g., a facility listed as a hazardous waste generator but not as having had a release), and facilities that were listed as "Closed" were not considered to have a potential to have impacted the Site.

- **Plant Gro Corporation** at 1039 Commercial Street, approximately 500 feet south and cross-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the LUST and SANTA CLARA LO databases. According to the ERIS Report and the GeoTracker database, a 2,000-gallon gasoline underground storage tank (UST) was removed from the property in 1988. Approximately 1,100 cubic yards of soil and 8,484 gallons of groundwater were removed and properly disposed of off the property. Eight groundwater monitoring wells were installed to monitor the extent of impacted groundwater. Residual concentrations of benzene and methyl tert butyl ether were determined to remain in groundwater beneath the property, localized to the vicinity of the former UST, and concentrations remained stable. The cleanup status was updated by the Santa Clara Valley Water District to "Completed – Case Closed" as of November 8, 2000. Based on the information provided in the ERIS Report and the GeoTracker database, this facility does not represent a recognized environmental condition in connection with the Site.

- **Saratoga Plastics** at 850 Faulstich Court, approximately 0.11 mile west and up-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the LUST database. According to the ERIS Report and the GeoTracker database, one 8,000-gallon and one 10,000-gallon diesel USTs and their associated piping were removed from the property on June 21, 1989. Contaminated soil underlying the tanks was identified at the time of the UST removal. During a soil and groundwater investigation conducted in October 2000, total petroleum hydrocarbons as diesel-range organics were consistently detected in what appeared to be a localized area adjacent to the former tanks. The cleanup status was updated by the Santa Clara Valley Water District to “Completed – Case Closed” as of January 24, 2001. Based on the information provided in the ERIS Report and the GeoTracker database, this facility does not represent a recognized environmental condition in connection with the Site.
- **Petrotek** at 925 Commercial Street, approximately 0.12 mile south and cross-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the RCRA SQG, SANTA CLARA LO, and SANTA CLARA CUPA databases. According to the ERIS Report and the GeoTracker database, the facility is a small quantity generator of hazardous waste and conducted a Self-Directed Fuel Leak Investigation of a 550-gallon waste-oil tank that was closed in-place in February 1987. Small amounts of oil and grease were detected in soil. The cleanup status was updated by the Santa Clara Valley Water District to “Completed – Case Closed” as of October 31, 1995. Based on the information provided in the ERIS Report and the GeoTracker database, this facility does not represent a recognized environmental condition in connection with the Site.
- **J & J Trucking** at 850 Service Street, approximately 0.18 mile southwest and up-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the LUST, SANTA CLARA LO, HIST TANK, and SANTA CLARA CUPA databases. According to the ERIS Report and the GeoTracker database, one 5,000-gallon gasoline UST and one 10,000-gallon diesel UST were removed from the property on October 15, 1993. Small holes were observed in the gasoline UST and a slight product odor was noted during removal. Approximately 330 cubic yards of soil was removed and properly disposed of off the facility. The Santa Clara Valley Water District reported that the majority of the contamination was removed by overexcavation, and that a significant risk to soil or groundwater at the property did not exist. The cleanup status was updated by the Santa Clara Valley Water District to “Completed – Case Closed” as of April 28, 2000. Based on the information provided in the ERIS Report and the GeoTracker database, this facility does not represent a recognized environmental condition in connection with the Site.

6.3 UNMAPPABLE LISTINGS

ERIS identified four facilities as “unplottable” that ERIS was unable to map due to inaccurate or inadequate address information. Farallon located these unplottable facilities and, according to the addresses provided by ERIS, the facilities are not located within the respective search radii. The unplottable facilities located do not represent a recognized environmental condition in connection with the Site.

7.0 INTERVIEWS

Farallon conducted interviews with individuals familiar with the Site and contacted relevant local governmental agencies to obtain additional Site information. The responses from the parties contacted are provided below.

7.1 INTERVIEW WITH SITE REPRESENTATIVE

During the site reconnaissance, Farallon interviewed Ms. Tiffany Klauer, a representative of Mr. Tom Klauer, owner of the Site, on April 15, 2019. The following information was obtained from this interview:

- No known USTs are present at the Site.
- Several aboveground storage tanks (ASTs) associated with Pick-N-Pull and Davey Tree tenant operations are present at the Site.
- Hazardous materials on the Site generally consist of automotive fluids, paints, pesticides, and janitorial cleaning supplies.
- Utilities are provided by the local municipality. There is no natural gas service at the Site.
- Tenants generally use the Site for storage, with the exception of Pick-N-Pull, who conducts automobile reclamation.
- No reportable spills or releases have occurred on the Site.

Ms. Klauer stated that she had not been made aware of any pending, threatened, or past:

- Litigation relevant to hazardous substances or petroleum products in, on, or from the Site;
- Administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site; or
- Notices from a governmental entity regarding violations of environmental laws or liability relating to hazardous substances or petroleum products.

7.2 INTERVIEW WITH FIRE DEPARTMENT

Farallon contacted the San Jose Fire Department on April 11, 2019 regarding previous and current ASTs and USTs at the Site. No response from San Jose Fire Department was received prior to completion of this Phase I ESA Report. San Jose Fire Department records reviewed during the 2017 Phase I ESA did not identify records for releases at the Site.

7.3 INTERVIEW WITH CITY

Farallon contacted the City of San Jose on April 10, 2019 to inquire whether notices of violations and/or reported hazardous spills at the Site were on file, and regarding previous and current ASTs and USTs at the Site. A representative of the City of San Jose indicated that it had no records of storage tanks, hazardous material storage, or spills associated with the Site.

7.4 INTERVIEW WITH HEALTH DEPARTMENT

Farallon contacted the Santa Clara County Department of Environmental Health on April 10, 2019 to inquire whether notices of violations and/or reported hazardous spills at the Site were on file. The Santa Clara County Department of Environmental Health provided documents pertaining to facility information, hazardous materials inventories, and inspection records. Minor violations such as accrual of used oil filters past the 1-year accumulation limit and improperly labeled hazardous waste containers were noted during inspections. A hazardous materials inventory for Davey Tree included substances such as fertilizer, bar and chain oil, miscellaneous coolants, miscellaneous oils, used oil, and used oil filters. The issues recorded in the documents reviewed by Farallon do not represent a recognized environmental condition in connection with the Site.

8.0 SITE RECONNAISSANCE

Farallon conducted a site reconnaissance on April 15, 2019 to observe the Site for physical evidence of recognized environmental conditions. The methodology used for the site reconnaissance and the observations made during the reconnaissance are discussed below. A description of the Site is provided in Section 2.2, Site Description. Photographs taken during the site reconnaissance are presented in Appendix B.

8.1 SITE RECONNAISSANCE METHODOLOGY

Farallon completed a walk around accessible areas of the Site and inspected accessible interior portions of Site buildings. There were no deviations from ASTM E1527-13 during the Phase I ESA. Limiting conditions encountered were the presence of vehicles and equipment on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in Site buildings that prevented Farallon from observing entire interior floor surfaces. In addition, Farallon was not provided access to all tenant areas of the Site. Based on information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

8.2 SITE RECONNAISSANCE OBSERVATIONS

Weather conditions at the time of the reconnaissance were overcast, with a temperature of approximately 60 degrees Fahrenheit. No weather-related Site-access restrictions were encountered during the reconnaissance.

The Site consists of Santa Clara County Parcel Nos. 241-10-002 and 241-10-003, which total approximately 9.25 acres of land developed with several small warehouse, office, and maintenance structures that were constructed in stages between approximately 1973 and 2005. Remaining areas of the Site consist of unpaved parking and storage areas, gravel areas, concrete-paved areas, and landscaped areas. Access to the Site is gained from Commercial Court, south of the Site.

8.2.1 Interior Observations

Farallon's observations of the interior of Site buildings during the site reconnaissance are documented in the table below. Comments pertaining to notable interior observations follow in Section 8.2.2. Photographs taken during the site reconnaissance are provided in Appendix B.

8.2.2 Interior Observation Comments

Staining and/or Corrosion

Farallon observed de minimis staining in the fluid-removal structure on the Pick-N-Pull portion of the Site. Farallon observed de minimis staining in the vehicle maintenance areas on the WM O’Neill and Vintage Tile portions of the Site.

Storage Tank(s), Vent Pipe(s), and/or Fuel Port(s)

Farallon observed one 500-gallon self-contained diesel fuel AST, two 1,000-gallon self-contained gasoline ASTs, and one approximately 500-gallon water AST in the fluid-removal structure on the Pick-N-Pull portion of the Site. Farallon observed an unused waste-oil AST in the storage warehouse on the Davey Tree portion of the Site. The ASTs appeared to be in good condition, de minimis staining was observed proximate to the ASTs. Additional ASTs observed are summarized under Hazardous Waste below.

Drum(s) and/or Other Container(s)

Farallon observed several drums and containers on the Pick-N-Pull portion of the Site containing liquids associated with auto reclamation. Farallon observed several drums of vehicle maintenance fluids in the vehicle maintenance areas on the WM O’Neill and Vintage Tile portions of the Site. Farallon observed multiple 5-gallon containers of paint on the WM O’Neill portion. Other drums and containers are summarized under Hazardous Waste below.

Hazardous Material(s) and/or Petroleum Product(s)

Farallon observed significant amounts of hazardous materials associated with auto reclamation activities in the Pick-N-Pull fluid-removal structure. Farallon observed minor amounts of hazardous materials, including automotive maintenance fluids in the vehicle maintenance areas in the WM O’Neill and Vintage Tile portions of the Site. Farallon observed a chemical storage trailer

on the Davey Tree portion of the Site that reportedly contained small quantities of pesticides, but was not accessible during the site reconnaissance. Other hazardous materials and/or petroleum products observed are summarized under Drum(s) and/or Other Container(s) above, and Hazardous Waste below.

Hazardous Waste

Farallon observed two approximately 500-gallon used-oil ASTs and two approximately 500-gallon used antifreeze ASTs, all within secondary containment in the fluid-removal structure on the Pick-N-Pull portion of the Site. Various 55-gallon drums were observed throughout the fluid-removal structure that reportedly are used to temporarily store fluids prior to transfer into the ASTs. Farallon observed an unused waste-oil AST and a parts washer in the storage warehouse on the Davey Tree portion of the Site.

8.2.3 Exterior Observations

Farallon's observations of the exterior of the Site during the site reconnaissance are documented in the table below. Comments pertaining to notable exterior observations follow in Section 8.2.4. Photographs taken during the site reconnaissance are provided in Appendix B.

EXTERIOR OBSERVATIONS	YES	NO

8.2.4 Exterior Observation Comments

Staining and/or Corrosion

Farallon observed significant petroleum staining throughout the Pick-N-Pull portion of the Site that appeared to be from stored vehicles in various stages of reclamation. De minimis petroleum staining was observed on other portions of the Site where vehicle maintenance is conducted.

Drum(s) and/or Other Container(s)

Farallon observed several cylinders of freon in a cage on the Pick-N-Pull portion of the Site, and several empty drums throughout the Pick-N-Pull portion. Farallon observed several containers of auto parts and auto batteries in the Auto Reclamation area of the Pick-N-Pull portion of the Site. Farallon observed several drums and containers with unknown contents on unpaved ground on the Vintage Tile portion of the Site. De minimis staining was observed proximate to the containers.

Hazardous Material(s) and/or Petroleum Product(s)

Farallon observed significant amounts of hazardous materials, including car batteries and automotive maintenance fluids associated with auto reclamation activities in the Pick-N-Pull portion of the Site. Other hazardous materials and/or petroleum products observed are summarized under Drum(s) and/or Other Container(s) above, and Hazardous Waste below.

Hazardous Waste

Farallon observed various 55-gallon drums throughout the Auto Reclamation area of the Pick-N-Pull portion of the Site that reportedly are used to temporarily store fluids prior to transfer into the ASTs.

Domestic Water

Domestic water is supplied to the Site by the City of San Jose.

Stormwater

Stormwater on the Site appeared to be infiltrated into the ground.

Septic/Sewer System

Sanitary sewage generated at the Site discharges to the municipal sanitary sewer system.

Transformer(s)

Farallon observed a pad-mounted transformer on the Pick-N-Pull portion of the Site. The transformer appeared to be in good condition, with no evidence of releases noted.

Significant Amount of Fill Material

Farallon observed a stockpile of base rock on the Pick-N-Pull portion of the Site, which is used to repair Site roads.

9.0 ADDITIONAL ENVIRONMENTAL SERVICES

At the request of Prologis, Farallon conducted environmental services in addition to those specified in ASTM E1527-13. These services are considered non-scope items, and are not required to satisfy ASTM E1527-13.

9.1 WETLANDS

Wetlands are defined jointly by U.S. Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers as “those areas that are inundated or saturated by surface or groundwater for a duration and frequency sufficient to support and under normal circumstances do support a prevalence of vegetation adapted for life in saturated soil conditions.” According to the ERIS Report, wetlands are not present on the Site. The federally designated wetlands nearest the Site are less than 175 feet from the northeastern Site boundary.

9.2 ASBESTOS

In June 1978, EPA initiated a ban on the use of asbestos-containing material in spray application products such as structural fireproofing and acoustic ceilings, pipe lagging, joint compounds, and spackles. Based on the Site buildings’ earliest construction date of approximately 1973, asbestos-containing materials may be present at the Site, although significant quantities are unlikely based on the buildings’ small size.

9.3 LEAD-BASED PAINT

In 1978, EPA initiated a ban on the manufacture and use of lead-based paints. Based on the Site buildings’ earliest construction date of approximately 1973, lead-based paint may be present at the Site. Painted surfaces were observed to be intact during the site reconnaissance.

9.4 WATER SUPPLY/LEAD IN DRINKING WATER

Potable water is supplied to the Site by San Jose Water, who conducts annual testing of its drinking water supply. The most-recent water-supply data available are from the *Annual Water Quality Report 2018*. Concentrations of the contaminants tested for were under the maximum contaminant levels established by EPA.

9.5 RADON

Radon is a colorless, tasteless, radioactive gas with an EPA-specified action level of 4.0 picocuries per liter of air. Radon gas has a short half-life of 3.8 days. The health risk potential of radon is associated with its rate of accumulation within confined areas, particularly those near or in the ground such as basements, where vapors can readily transfer from the ground to indoor air through foundation cracks or other pathways.

According to the ERIS Report, the Site is in EPA Radon Zone 2, with predicted average indoor screening levels of between 2.0 and 4.0 picocuries per liter. The EPA zone designation reflects the average short-term radon measurement that can be expected to be measured in a building without implementation of radon-control methods. Based on the EPA designation, radon is unlikely to pose an environmental concern to Site occupants.

9.6 WATER INTRUSION

Farallon inspected visually accessible building materials for evidence of water damage during the site reconnaissance. No evidence of water-damaged building materials was observed. Farallon did not detect high-humidity areas in the buildings that would suggest moisture concerns.

10.0 FINDINGS AND OPINIONS

Farallon observed significant petroleum staining throughout the Pick-N-Pull portion of the Site that appeared to be from stored vehicles in various stages of reclamation. De minimis petroleum staining was observed on other portions of the Site where vehicle maintenance is conducted. Staining was further assessed during the 2019 Phase II ESA.

During the Phase I ESA, Farallon identified several potential environmental concerns in connection with the Site. Farallon was contracted to complete a Phase II ESA at the Site, summarized in the 2019 Phase II ESA Report. The following potential environmental concerns were further investigated during the Phase II ESA: former landfill operations, vehicle maintenance areas, chemical storage areas, auto reclamation areas, and potential impacts to the Site from application of pesticides and other chemicals in connection with former agricultural uses.

The 2019 Phase II ESA included collection of soil and/or reconnaissance groundwater samples from 19 locations for laboratory analysis. Various industrial constituents were detected at concentrations exceeding regulatory guidelines for unrestricted land use in soil and groundwater. The conclusion from the Phase II ESA was that analytical results suggest that one or more releases of industrial constituents from historical operations occurred at the Site. Data also suggest the potential for contribution to the identified impact to groundwater by surrounding property releases.

The presence of industrial constituents in soil and groundwater apparently originating from historical Site and surrounding land use represents a recognized environmental condition in connection with the Site.

11.0 CONCLUSIONS

Farallon conducted a Phase I ESA for the property at 1055 Commercial Court in San Jose, California in conformance with the scope and limitations of ASTM E1527-13. Any exceptions to or deletions from this practice are described in Section 1.5, Deviations.

This assessment identified the following recognized environmental condition in connection with the Site:

- The presence of industrial constituents in soil and groundwater apparently originating from historical Site and surrounding land use.

At the request of Prologis, Farallon included additional opinions and recommendations for the Site beyond those specified in ASTM E1527-13 for de minimis and recognized environmental conditions. Based on the findings from this Phase I ESA, additional investigation is recommended to fully characterize the Site due to concentrations of industrial constituents detected in Site soil and groundwater.

13.0 LIMITATIONS

13.1 GENERAL LIMITATIONS

The conclusions contained in this report/assessment are based on professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location. The conclusions contained herein are subject to the following inherent limitations:

- **Accuracy of Information.** Farallon obtained, reviewed, and evaluated certain information used in this report/assessment from sources that were believed to be reliable. Farallon's conclusions, opinions, and recommendations are based in part on such information. Farallon's services did not include verification of its accuracy or authenticity. Should the information upon which Farallon relied prove to be inaccurate or unreliable, Farallon reserves the right to amend or revise its conclusions, opinions, and/or recommendations.
- **Reconnaissance and/or Characterization.** Farallon performed a reconnaissance and/or characterization of the Site that is the subject of this report/assessment to document current conditions. Farallon focused on areas deemed more likely to exhibit hazardous materials conditions. Contamination may exist in other areas of the Site that were not investigated or were inaccessible. Site activities beyond Farallon's control could change at any time after the completion of this report/assessment.

For the foregoing reasons, Farallon cannot and does not warrant or guarantee that the Site is free of hazardous or potentially hazardous substances or conditions, or that latent or undiscovered conditions will not become evident in the future. Farallon's observations, findings, and opinions can be considered valid only as of the date of the report.

This report/assessment has been prepared in accordance with the contract for services between Farallon and Prologis, Inc. and currently accepted industry standards. No other warranties, representations, or certifications are made.

13.2 LIMITATION ON RELIANCE BY THIRD PARTIES

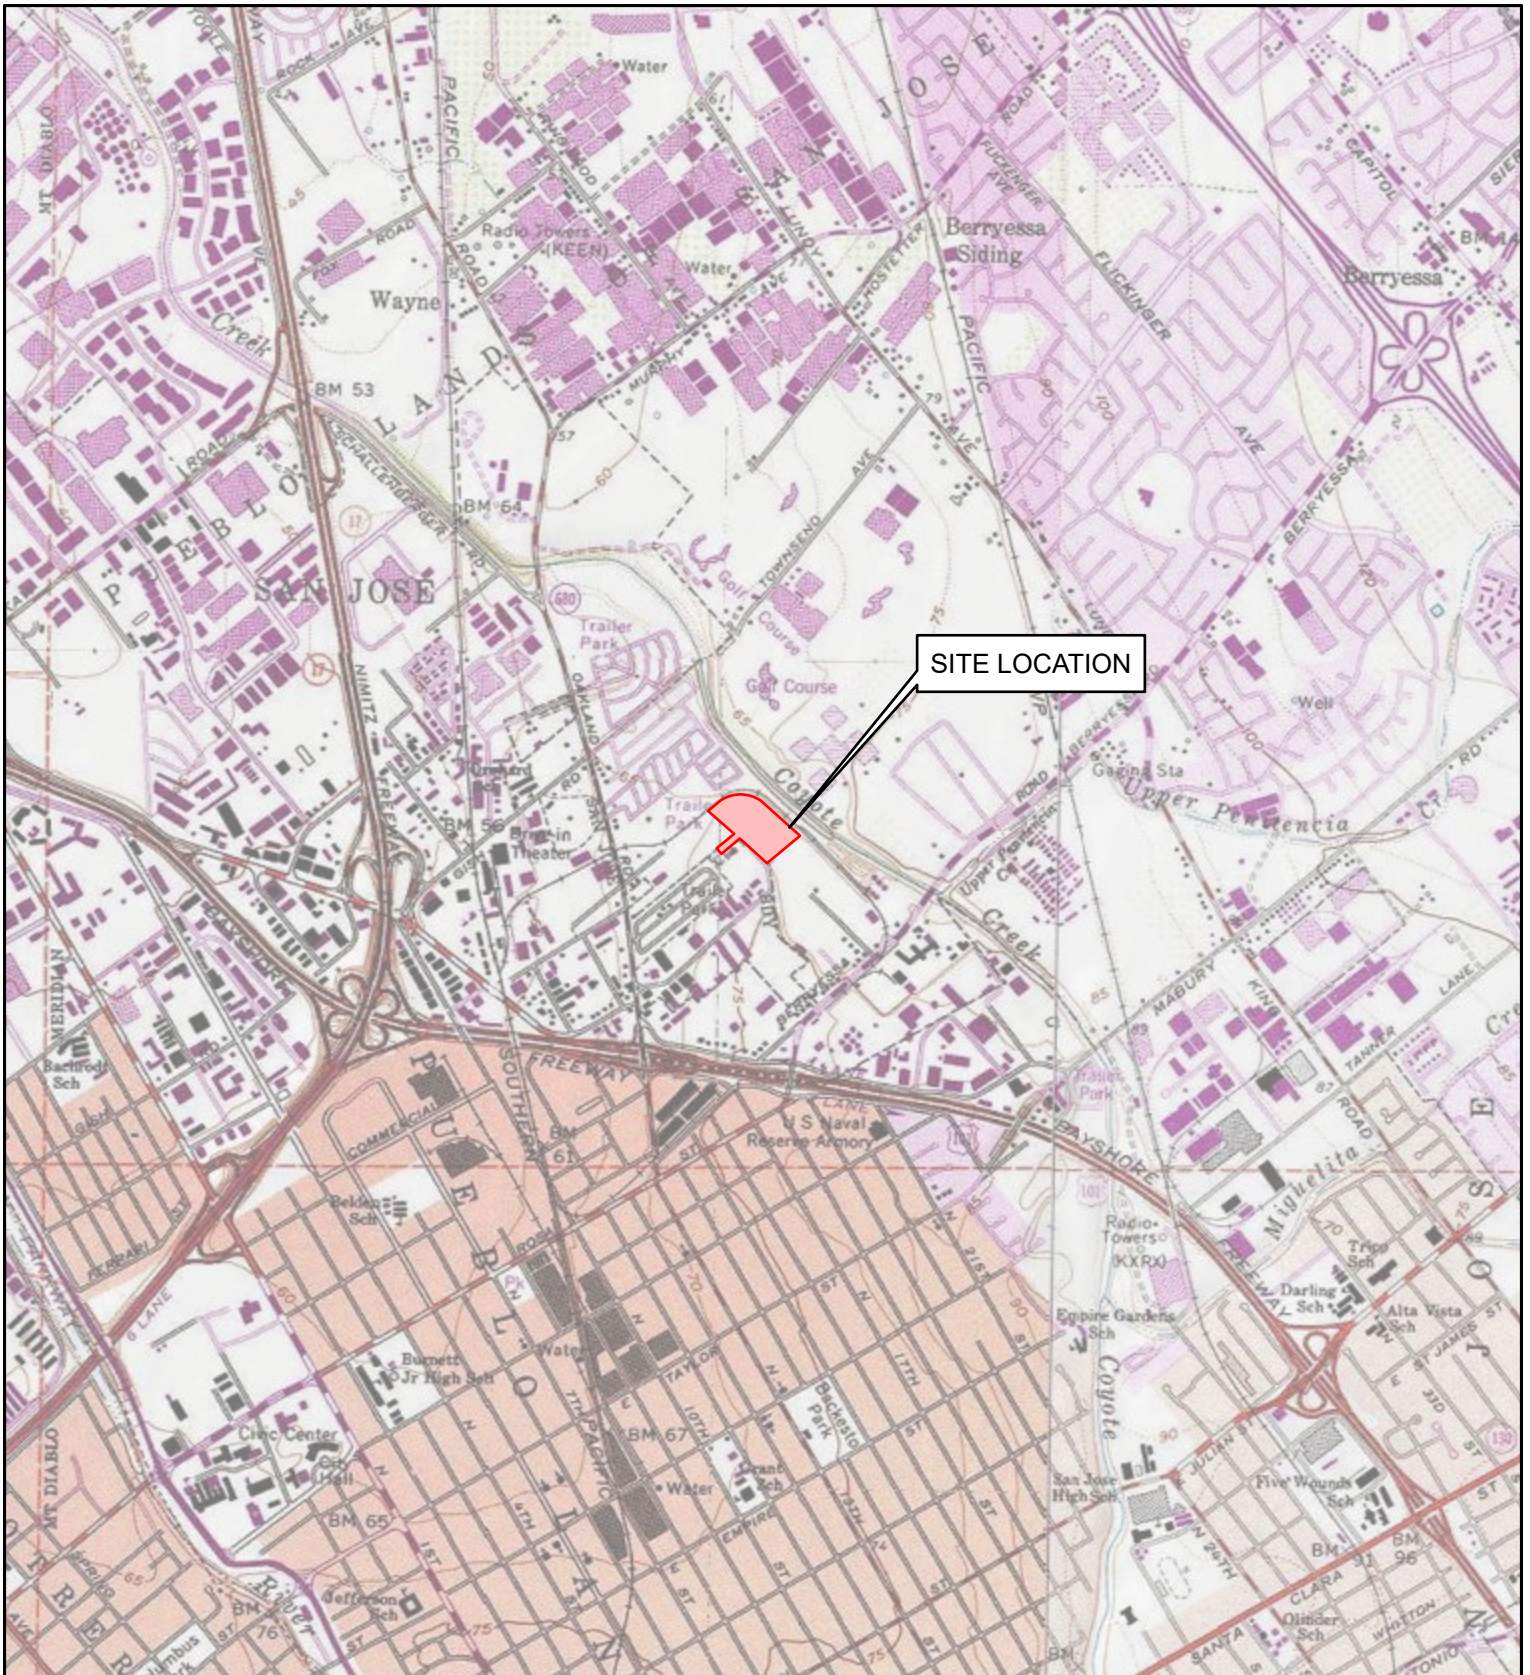

Reliance by third parties is prohibited. This report/assessment has been prepared for the exclusive use of Prologis, Inc. to address the unique needs of Prologis, Inc. at the Site at a specific point in time.

This is not a general grant of reliance. No one other than Prologis, Inc. may rely on this report unless Farallon agrees in advance to such reliance in writing. Any unauthorized use, interpretation, or reliance on this report/assessment is at the sole risk of that party, and Farallon will have no liability for such unauthorized use, interpretation, or reliance.

GAVIN POLITE FISCO, P.G., L.G., R.G. BA Geology
Associate Geologist 10 years experience

Mr. Fisco has 10 years of professional environmental experience assisting clients with complex soil and groundwater assessment and remediation, environmental due diligence, regulatory compliance, and litigation support. Areas of expertise include groundwater monitoring, conceptual site modeling, remediation design, and regulatory closure. Mr. Fisco also has been involved in hazardous material cleanup, and bench-scale testing and microbiological studies for remediation. Additional project work has entailed Work Plan preparation, investigation oversight, and results reporting.

SCOTT ALLIN, R.E.P.A. BS Physical Science (Hydrology)
Principal Environmental Scientist 30 years experience

Mr. Allin has more than 30 years of project and program management experience in the evaluation and reporting of environmental liability associated with the sale or Brownfields redevelopment of impaired properties. He has supported the needs of developers and others in the acquisition of Cost Cap and Finite Risk environmental insurance to manage long-term environmental risks. He has provided clients with value-added due diligence services for single properties and large multi-million-dollar mixed-use portfolios, both nationally and internationally. Mr. Allin has provided guidance for evaluating environmental risks during complex mergers and acquisitions, and management services for implementation of remedial actions, asbestos abatement, environmental audit programs, and environmentally sensitive property improvements.

Comments
 I am not aware of any other environmental conditions or concerns on adjacent or nearby properties.

(1) Environmental cleanup liens that have been filed or recorded against the Site (Part 312.25 of Title 40 of the Code of Federal Regulations [40 CFR 312.25])

Are you aware of any environmental cleanup liens against the Site that have been filed or recorded under federal, tribal, state, or local law?

I am not aware of any environmental cleanup liens against the Site.

(2) Activity and land use limitations that are in place at the Site or that have been filed or recorded in a registry (40 CFR 312.26)

Are you aware of any activity and land use limitation (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

I am not aware of any activity and land use limitation.

(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)

As the user of the Phase I ESA Report, do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupant(s) of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

No, I have no specialized knowledge of the Site.

(4) Relationship of the purchase price to the fair market value of the Site if it were not contaminated (40 CFR 312.29)

Does the purchase price being paid for this Site reasonably reflect the fair market value of the Site? If you conclude that there is a difference between the purchase price and the fair market value, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?

I have no knowledge of the purchase price being discounted for environmental conditions

(5) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)

Are you aware of commonly known or reasonably ascertainable information about the Site that would help Farallon Consulting, L.L.C. to identify conditions indicative of a chemical or other release or threatened release? For example, as user of the Phase I ESA Report:

Do you know the past use(s) of the Site? (If yes, please specify.) No.

Do you know of a specific chemical(s) present at the Site, or present at one time? (If yes, please specify.) No.

Do you know of a chemical and/or other spill(s) or release(s) that have taken place at the Site? (If yes, please specify.) No.

Do you know of any environmental cleanup(s) that have taken place at the Site? (If yes, please specify.) No.

(6) The degree of obviousness of the presence or likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)

As the user of the Phase I ESA Report, based on your knowledge and experience related to the Site, is there any obvious indicator(s) that point to the presence or likely presence of contamination at the Site? (If yes, please specify.)

No.

2019 PHASE II ESA REPORT

PHASE I
ENVIRONMENTAL SITE ASSESSMENT REPORT
1055 Commercial Court
San Jose, California

Farallon PN: 1071-036 (Task 9)

August 1, 2019

Mr. Robert L. Young
Berding & Weil LLP
2175 North California Boulevard, Suite 500
Walnut Creek, California 94596

**RE: PHASE II ENVIRONMENTAL SITE ASSESSMENT FINDINGS
1055 COMMERCIAL COURT
SAN JOSE, CALIFORNIA
FARALLON PN: 2250-001**

Dear Mr. Young:

Farallon Consulting, L.L.C. (Farallon) has prepared this letter to summarize the findings from the Phase II Environmental Site Assessment (Phase II ESA) performed for Berding & Weil LLP (Berding & Weil) for the property at 1055 Commercial Court in San Jose, California (herein referred to as the Site) (Figure 1). The Phase II ESA was performed in accordance with the scope of work outlined in the Technical Memorandum regarding Phase I Environmental Site Assessment Preliminary Findings and Recommendations, 1055 Commercial Court, San Jose, California dated May 2, 2019, from Messrs. Gavin Polite Fisco and Scott Allin of Farallon to Ms. Janet Frentzel of Prologis, Inc. (Prologis) (Phase II Memorandum). Berding & Weil is counsel representing the current Site owner, and Prologis is considering acquisition of the Site. Farallon was contracted by Prologis to perform a Phase I ESA on the Site, and based on the preliminary findings from the Phase I ESA, Farallon was contracted by Berding & Weil to perform a Phase II ESA.

This letter provides a brief background of the Site, summarizes the Phase II ESA findings, and presents Farallon's conclusions based on the findings.

SITE BACKGROUND

The Site consists of Santa Clara County Parcel Nos. 241-10-002 and 241-10-003, which together total approximately 9.25 acres of land developed with several small warehouse and canopy structures that were constructed in stages between approximately 1973 and 2005. Access to the Site is gained from Commercial Court at the southwestern corner of the Site. The Site is in a mixed industrial and commercial area. A Site plan depicting the Site boundary and current features is provided on Figure 2.

At the time of Farallon's site reconnaissance, Pick-N-Pull, Allied Trenching, Vintage Tile, Peninsula Sandblasting, Davey Tree, King Crane, and WM O'Neill occupied the Site. Pick-N-Pull occupies the southern portion of the Site and operates a recycled auto parts salvage yard. Allied Trenching occupies the east-central portion of the Site and uses the area for equipment storage. Vintage Tile occupies the northeastern portion of the Site and uses the area for equipment storage. Peninsula Sandblasting occupies the north-central portion of the Site and uses the area for

equipment storage. Davey Tree occupies the west-central portion of the Site and uses the area for equipment storage and office space. King Crane occupies the west-central portion of the Site and uses the warehouse and surrounding area for equipment storage. WM O'Neill occupies the northern portion of the Site and uses the area for equipment storage. The majority of the Site consists of unpaved dirt and gravel surfaces; limited areas are paved. The Site owner is Mr. Tom Klauer.

During performance of a Phase I ESA, Farallon identified the following potential environmental concerns in connection with the Site, which were further investigated during the Phase II ESA.

- **Former Landfill Operations:** The Site historically was occupied by Beck's Property, which was identified in the Environmental Risk Information Services *Database Report* prepared for the Site dated April 12, 2019 on the Solid Waste Information System (SWF/LF) database as a landfill for wood waste and green materials for chipping and grinding operations from approximately 2006 to 2010. In aerial photographs reviewed for this time period, landfill operations appeared to be restricted to the northwestern portion of the Site. Landfill operations have the potential to impact the Site from unknown contaminants in the waste brought to the landfill, including volatile organic compounds (VOCs), petroleum hydrocarbons, polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), and pesticides.
- **Vehicle Maintenance Areas:** Multiple vehicle maintenance areas were identified during the site reconnaissance, including storage areas for hazardous materials such as petroleum products, automobile fluids, and motor oil. Farallon observed poor housekeeping practices, staining, and unlabeled drums and containers during the site reconnaissance.
- **Chemical Storage Areas:** The Site is occupied by commercial and industrial tenants that use hazardous materials, including paints, pesticides, degreasers, automotive fluids, and motor oil, in their operations and have received notices of minor violations from the environmental health department regarding poor housekeeping.
- **Auto Reclamation Area:** The southern portion of the Site is occupied by Pick-N-Pull, a recycled auto parts salvage yard. During the site reconnaissance, Farallon observed cars in poor condition, petroleum staining, and several aboveground storage tanks and drums used for storing waste automotive fluids on unpaved surfaces throughout the salvage yard.
- **Potential Environmental Impacts to the Site from the Application of Pesticides and Other Chemicals in Connection with Former Agricultural Uses:** Based on historical aerial photographs, the Site appeared to be used for agricultural operations as late as 1960. Agricultural lands are known to use pesticides and herbicides.

SUMMARY OF PHASE II ESA FINDINGS

The Phase II ESA was performed by Farallon on May 21 through May 23, 2019, and consisted of collecting soil and reconnaissance groundwater samples from borings F-1 through F-5, F-7, F-8, and F-10 through F-17 and surficial soil samples from locations S-1, S-2, S-5, and S-6 on the Site

for laboratory analysis. Boring locations are shown on Figure 2. The final sampling and analysis plan, including laboratory methodologies used for the Phase II ESA, is summarized in Table 1. Additional borings planned and summarized in the Phase II Memorandum were either not completed due to time and access restrictions or encountered refusal during drilling.

Prior to drilling, boring locations were cleared by a private utility locator. In general, borings were advanced using a hand auger to a depth of 5 feet below ground surface (bgs), then advanced using a direct-push drill rig to a depth of at least 3 feet below first-encountered groundwater. Reconnaissance groundwater samples were collected from temporary polyvinyl chloride wells constructed in the boreholes. The samples were extracted using a peristaltic pump. During drilling, soil samples were screened for volatile constituents using a photoionization detector. Industry-standard methodologies were used for sample preservation and transport. At the completion of the sampling activities, the boreholes were tremie-grouted with neat cement.

Investigation-derived waste, including soil cuttings and decontamination water, was containerized on the Site in a 55-gallon U.S. Department of Transportation-rated drum. The analytical results from the investigation will be used to profile the waste for appropriate disposal. The waste will be transported by a certified waste management contractor to be disposed of at an appropriate disposal facility in accordance with applicable state and federal laws.

Lithologic conditions encountered during drilling generally consisted of sand with gravel and contained some fill material, primarily brick debris, in the upper 5 feet bgs, grading to clayey sand or sandy clay to the total depth explored of 24 feet bgs. First-encountered groundwater occurred at depths ranging from approximately 12 to 20 feet bgs. Elevated photoionization detector readings that exceeded background readings were encountered in numerous borings across the Site, most commonly at depths greater than 10 feet bgs.

Analytical results from the Phase II ESA are summarized in Tables 2 through 14 and the laboratory analytical reports are provided in Attachment A. The analytical results for soil and reconnaissance groundwater samples were compared to San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels for soil and groundwater dated January 2019 (ESLs), for both unrestricted land use (Tier 1) and other commercial/industrial or exposure values, as referenced in Tables 2 through 14. ESLs are conservative regulatory screening guidelines for determining whether further evaluation is warranted, and are not considered specific regulatory cleanup criteria. Soil and groundwater analytical results from the Phase II ESA are summarized below.

SOIL ANALYTICAL RESULTS

Total petroleum hydrocarbons as diesel-range organics (DRO) and oil-range organics (ORO) were detected in soil sample F-10 at concentrations exceeding Tier 1 ESLs but less than commercial shallow soil exposure ESLs. Total petroleum hydrocarbons as gasoline-range organics (GRO) and DRO were detected in soil sample F-13 at concentrations exceeding Tier 1 ESLs but less than commercial shallow soil exposure ESLs.

VOCs were not detected at concentrations exceeding Tier 1 ESLs in the soil samples analyzed, with the exception of acetone and naphthalene. Acetone and naphthalene were detected in the soil samples collected from borings F-5 and F-16, respectively, at concentrations exceeding Tier 1 ESLs but less than the commercial shallow soil exposure ESLs.

Semivolatile organic compounds (SVOCs) were not detected at concentrations exceeding Tier 1 ESLs in the soil samples analyzed, with the exception of bis(2-ethylhexyl) phthalate and dimethylphthalate. Bis(2-ethylhexyl) phthalate and dimethylphthalate were detected at concentrations exceeding Tier 1 ESLs but less than commercial shallow soil exposure ESLs in the soil sample collected from borings F-11.

PCBs were not detected at concentrations exceeding Tier 1 ESLs in the soil samples analyzed.

PAHs were not detected at concentrations exceeding Tier 1 ESLs in the soil samples analyzed, with the exception of benzo(a)pyrene and naphthalene. Benzo(a)pyrene and naphthalene were detected in the soil samples collected from borings F-2 and F-13, respectively, at concentrations exceeding Tier 1 ESLs but less than commercial shallow soil exposure ESLs.

One or more pesticides were detected at concentrations exceeding Tier 1 ESLs in all soil samples analyzed; however, pesticide concentrations were all less than the commercial shallow soil exposure ESLs.

Several metals were detected at concentrations exceeding Tier 1 ESLs in soil samples analyzed; however, only lead and arsenic were detected at concentrations exceeding the commercial shallow soil exposure ESL. Lead was detected at a concentration exceeding the commercial shallow soil exposure ESL in the soil sample collected from boring F-14. Arsenic was detected at concentrations exceeding the commercial shallow soil exposure ESL in all soil samples collected at the Site. Arsenic is known to occur naturally in California soil at concentrations exceeding the commercial and industrial ESL. The San Francisco Bay Regional Water Quality Control Board has identified 11 milligrams per kilogram of arsenic in soil as an acceptable background concentration. The arsenic concentrations detected at the Site were less than this background concentration, with the exception of the soil sample collected from boring F-14, which contained 12 milligrams per kilogram of arsenic.

RECONNAISSANCE GROUNDWATER ANALYTICAL RESULTS

GRO and/or DRO were detected at concentrations exceeding Tier 1 ESLs in all reconnaissance groundwater samples analyzed. No Tier 1 ESLs have been established for ORO. No commercial and industrial ESLs for vapor intrusion have been established for GRO, DRO, and ORO.

Several VOCs were detected at concentrations exceeding Tier 1 ESLs in the reconnaissance groundwater samples analyzed. Benzene was detected at concentrations exceeding the commercial/industrial ESL for vapor intrusion in reconnaissance groundwater samples collected from borings F-5, F-8, and F-11. Ethylbenzene was detected at concentrations exceeding the commercial/industrial ESL for vapor intrusion in the reconnaissance groundwater sample collected

from boring F-4. Vinyl chloride was detected at concentrations exceeding the commercial/industrial ESL for vapor intrusion in reconnaissance groundwater samples collected from borings F-10, F-11, F-12, and F-14 on the southeastern portion of the Site.

The SVOCs bis(2-ethylhexyl) phthalate, 3,3-dichlorobenzidine, and biphenyl were detected at concentrations exceeding Tier 1 ESLs in reconnaissance groundwater samples collected from borings F-2, F-11, and F-13, respectively. No SVOCs were detected at concentrations exceeding commercial/industrial ESLs for vapor intrusion.

PAHs were detected at concentrations exceeding Tier 1 ESLs in reconnaissance groundwater samples collected from borings F-5, F-11, and F-13. No PAHs were detected at concentrations exceeding commercial/industrial ESLs for vapor intrusion.

No pesticides were detected at concentrations exceeding laboratory reporting limits in the reconnaissance groundwater sample analyzed for pesticides.

All metals, with the exception of thallium, were detected at concentrations exceeding Tier 1 ESLs in the reconnaissance groundwater samples collected on the Site. Mercury was detected at concentrations exceeding commercial/industrial ESLs in reconnaissance groundwater samples collected from borings F-10, F-12, and F-14 through F-17.

CONCLUSIONS

The results from the Phase II ESA suggest that one or more releases of industrial constituents from historical operations occurred at the Site. Although soil sources for the impact to groundwater were not identified, the concentration gradient in groundwater across the Site suggests that soil sources exist on the Site. Data also suggest the potential for contribution to the identified impact to groundwater by surrounding property releases. The elevated metals and PAH concentrations detected in reconnaissance groundwater samples may be a result of excessive dissolved solids that commonly occur when reconnaissance groundwater sampling methodology is used. Additional investigation is recommended to fully characterize the Site due to concentrations of commercial constituents detected in Site soil and groundwater.

CLOSING

Farallon appreciates the opportunity to provide Berding & Weil LLP with environmental consulting services for this project. Please contact Scott Allin at (916) 616-8113 if you have questions or need additional information.

Analytical Report reviewed & approved for release on 05/30/2019 by:

Angela Rydelius
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Farallon Consulting
Project: 2250-001; 1055 Commercial Ct; San Jose, CA
WorkOrder: 1905B42

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

B	Analyte detected in the associated Method Blank and in the sample
H	Samples were analyzed out of hold time
J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
P	Agreement between quantitative confirmation results exceed method recommended limits
S	Spike recovery outside accepted recovery limits
a9	Reporting limit near, but not identical to, our standard reporting limit due to variable Encore/Solid sample weight
a19	Reporting limit near, but not identical to our standard reporting limit due to variable sample volume
b6	Lighter than water immiscible sheen/product is present
b8	Sample diluted prior to digestion due to high sediment content.
c2	Surrogate recovery outside of the control limits due to matrix interference.
d1	Weakly modified or unmodified gasoline is significant
d7	Strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
d9	No recognizable pattern
e2	Diesel range compounds are significant; no recognizable pattern
e3	Aged diesel is significant
e7	Oil range compounds are significant
e8	Pattern resembles kerosene/kerosene range/jet fuel range
h7	Copper (EPA 3660B) cleanup

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.
F3	The surrogate standard recovery and/or RPD is outside of acceptance limits.
F10	MS/MSD outside control limits. Physical or chemical interferences exist due to sample matrix.

NOTES: - STLC and TCLP extractions require 2 days to complete; therefore, all TATs begin after the extraction is completed (i.e., One-day TAT yields results in 3 days from sample submission).

- MAI assumes that all material present in the provided sampling container is considered part of the sample - MAI does not exclude any material from the sample prior to sample preparation unless requested in writing by the client.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Project Contact: Ryan Charney

Project P.O.:

Project: 2250-001; 1055 Commercial Ct

Project Received: 05/22/2019

Analytical Report reviewed & approved for release on 05/31/2019 by:

Jennifer Lagerbom

Project Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Farallon Consulting
Project: 2250-001; 1055 Commercial Ct
WorkOrder: 1905C36

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Glossary of Terms & Qualifier Definitions

Client: Farallon Consulting
Project: 2250-001; 1055 Commercial Ct
WorkOrder: 1905C36

Analytical Qualifiers

A	The reported value is determined using a "single point" calibration by GC-ECD as allowed by the method.
B	Analyte detected in the associated Method Blank and in the sample
J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
P	Agreement between quantitative confirmation results exceed method recommended limits
a9	Reporting limit near, but not identical to, our standard reporting limit due to variable Encore/Solid sample weight
a19	Reporting limit near, but not identical to our standard reporting limit due to variable sample volume
b8	Sample diluted prior to digestion due to high sediment content.
d1	Weakly modified or unmodified gasoline is significant
d2	Heavier gasoline range compounds are significant (possible aged gasoline)
d7	Strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
d9	No recognizable pattern
e2	Diesel range compounds are significant; no recognizable pattern
e7	Oil range compounds are significant
e8	Pattern resembles kerosene/kerosene range/jet fuel range

Quality Control Qualifiers

F1	MS/MSD recovery and/or RPD is out of acceptance criteria; LCS validates the prep batch.
F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.
F3	The surrogate standard recovery and/or RPD is outside of acceptance limits.
F16	RawVal < LQL.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.
 Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

MAI clients MUST disclose any dangerous chemicals known to be present in their submitted samples in concentrations that may cause immediate harm or serious future health endangerment as a result of brief, gloved, open air, sample handling by MAI staff. Non-disclosure incurs an immediate \$250 surcharge and the client is subject to full legal liability for harm suffered. Thank you for your understanding and for allowing us to work safely.

* If metals are requested for water samples and the water type (Matrix) is not specified on the chain of custody, MAI will default to metals by E200.8.

Please provide an adequate volume of sample. If the volume is not sufficient for a MS/MSD a LCS/LCSD will be prepared in its place and noted in the report.

Oakland, CA 94612

Project Contact: Ryan Charney

Project P.O.:

Project: 2250-001; 1055 Commercial Ct.

Project Received: 05/23/2019

Analytical Report reviewed & approved for release on 06/04/2019 by:

Angela Rydelius
Laboratory Manager

The report shall not be reproduced except in full, without the written approval of the laboratory. The analytical results relate only to the items tested. Results reported conform to the most current NELAP standards, where applicable, unless otherwise stated in the case narrative.

Glossary of Terms & Qualifier Definitions

Client: Farallon Consulting
Project: 2250-001; 1055 Commercial Ct.
WorkOrder: 1905D23

Glossary Abbreviation

%D	Serial Dilution Percent Difference
95% Interval	95% Confident Interval
DF	Dilution Factor
DI WET	(DISTLC) Waste Extraction Test using DI water
DISS	Dissolved (direct analysis of 0.45 µm filtered and acidified water sample)
DLT	Dilution Test (Serial Dilution)
DUP	Duplicate
EDL	Estimated Detection Limit
ERS	External reference sample. Second source calibration verification.
ITEF	International Toxicity Equivalence Factor
LCS	Laboratory Control Sample
MB	Method Blank
MB % Rec	% Recovery of Surrogate in Method Blank, if applicable
MDL	Method Detection Limit
ML	Minimum Level of Quantitation
MS	Matrix Spike
MSD	Matrix Spike Duplicate
N/A	Not Applicable
ND	Not detected at or above the indicated MDL or RL
NR	Data Not Reported due to matrix interference or insufficient sample amount.
PDS	Post Digestion Spike
PDSD	Post Digestion Spike Duplicate
PF	Prep Factor
RD	Relative Difference
RL	Reporting Limit (The RL is the lowest calibration standard in a multipoint calibration.)
RPD	Relative Percent Deviation
RRT	Relative Retention Time
SPK Val	Spike Value
SPKRef Val	Spike Reference Value
SPLP	Synthetic Precipitation Leachate Procedure
ST	Sorbent Tube
TCLP	Toxicity Characteristic Leachate Procedure
TEQ	Toxicity Equivalents
TZA	TimeZone Net Adjustment for sample collected outside of MAI's UTC.
WET (STLC)	Waste Extraction Test (Soluble Threshold Limit Concentration)

Analytical Qualifiers

A	The reported value is determined using a "single point" calibration by GC-ECD as allowed by the method.
B	Analyte detected in the associated Method Blank and in the sample
J	Result is less than the RL/ML but greater than the MDL. The reported concentration is an estimated value.
P	Agreement between quantitative confirmation results exceed method recommended limits
S	Spike recovery outside accepted recovery limits
a2	Sample diluted due to cluttered chromatogram
a3	Sample diluted due to high organic content.
a9	Reporting limit near, but not identical to, our standard reporting limit due to variable Encore/Solid sample weight
a19	Reporting limit near, but not identical to our standard reporting limit due to variable sample volume
b1	Aqueous sample that contains greater than ~1 vol. % sediment
b6	Lighter than water immiscible sheen/product is present
c2	Surrogate recovery outside of the control limits due to matrix interference.
c4	Surrogate recovery outside of the control limits due to coelution with another peak(s) / cluttered chromatogram.
d1	Weakly modified or unmodified gasoline is significant
d2	Heavier gasoline range compounds are significant (possible aged gasoline)
d7	Strongly aged gasoline or diesel range compounds are significant in the TPH(g) chromatogram
d9	No recognizable pattern
d17	Reporting limit for MTBE raised due to co-elution with non-target peaks.
e2	Diesel range compounds are significant; no recognizable pattern
e3	Aged diesel is significant
e7	Oil range compounds are significant
e8	Pattern resembles kerosene/kerosene range/jet fuel range
h7	Copper (EPA 3660B) cleanup
j1	See attached narrative

Quality Control Qualifiers

F2	LCS/LCSD recovery and/or RPD/RSD is out of acceptance criteria.
F3	The surrogate standard recovery and/or RPD is outside of acceptance limits.
F10	MS/MSD outside control limits. Physical or chemical interferences exist due to sample matrix.

Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)		
Violation Notes:			

Returned to compliance on 05/03/2017. Per Mr. Calvillo, employees were provided with initial HMBP training, but no refresher training has occurred for approximately three years. An HMBP-employee training template will be provided with this inspection report.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Citation:	22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)		
Violation Notes:			

Returned to compliance on 05/03/2017. Per a review of State's inventory of consolidated manifests from the past 3 years, the facility has not shipped used antifreeze off-site for disposal since 3/28/2014. One 55 gallon drum is used to accumulate used antifreeze in the fleet maintenance shop. Ensure used antifreeze does not accumulate for longer than one year.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

Failed to meet the conditions of satellite accumulation regulations, including but not limited to the following:
 ? accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator
 ? the container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words ?Hazardous Waste? including specified information
 ? container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a ?90 day? accumulation area
 ? 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated
 ? Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accumulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.

Violation Notes:

Returned to compliance on 05/03/2017. Coarse metal fines were observed on the ground around the lathe in the fleet maintenance shop. Current practice is to sweep up the metal fines and dispose of as non-hazardous trash. Metal fines may contain RCRA-regulated metals (e.g. chromium, lead). A hazardous waste determination must be conducted using generator knowledge or laboratory testing, as outlined below. If determined to have RCRA-regulated metals in regulated concentrations, the coarse metal fines must be collected and managed as scrap metal or as fully-regulated hazardous waste. Provide documentation of the hazardous waste determination to HMCD for review.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes:

Returned to compliance on 05/03/2017. Empty 5 gallon cans of mineral spirits were observed in the fleet maintenance shop. Upon inquiry, Mr. Calvillo stated that the mineral spirits are used to wash equipment in the red parts washer. A small quantity of brown-black liquid and three brake cleaner aerosol cans were observed in an open, red parts washer. The parts washer does not have an attached accumulation container and waste solvent remains in the open, parts washer tank. Upon inquiry as to how the used parts washer solvent is disposed, Mr. Calvillo stated that it evaporates. Allowing used parts washer solvent to evaporate for the purpose of disposal constitutes illegal treatment of hazardous waste. Ensure that any used parts washer solvent is collected, managed, and disposed of as hazardous waste (e.g. properly labeled, accumulated in a closed, compatible container, transported for disposal by a hazardous waste hauler).; Note: data in [Violation Notes] field for some records is truncated from the source.

NOTE TO FACILITY: - Upon your next HMBP submittal, ensure that each hazardous material/waste is properly identified by its hazardous material type (pure, mixture, waste). On-site to conduct a routine hazardous materials business plan (HMBP) inspection. The following hazardous materials/wastes were observed in HMBP-reportable quantities: 1. Used Oil: 110 gallons total 2. Used Antifreeze: 55 gallons total 3. Motor Oil: 205 gallons total 4. Liquefied Petroleum Gas: 699 gallons total (600 gallon tank + cylinders for forklift and other use throughout facility) It is of note that small quantities of carbon dioxide, argon/arbon dioxide mixture, oxygen, acetylene, nitrogen, diesel exhaust fluid (DEF), and muriatic acid were observed, but below HMBP-reportable thresholds. NOTES: - CERS ID 10454296 - Most recent HMBP submittal: 9/11/2013 - The facility has notified the property owner that they are subject to HMBP-reporting requirements.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Citation: 22 CCR 15 66265.194 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.194	
Violation Notes:	

A large quantity of used oil/used antifreeze was observed to be accumulating in the used oil and used antifreeze tanks' secondary containment "vault" and leaking from the "vault" onto the open concrete floor. Observations indicate that preventative measures are not being taken to ensure that the tanks are not releasing hazardous waste (spills control) and/or overfills are not occurring.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

Failure of the operator for placing wastes or treatment reagents in a tank system that could cause the tank , its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail; and for not using appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. (Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure).

Violation Notes:

1) Three 500 gallon aboveground tanks are used to accumulate gasoline removed from vehicles (i.e. ?reclaimed gasoline?). The gasoline is pumped out twice per week (approximately 10-12,000 gallons per month) and transported to Lamb Fuels, who recycles/reclaims the gasoline to make new, usable gasoline for commercial sale. 2) One 500 gallon aboveground tank is used to accumulate diesel removed from vehicles, reclaimed, and then used on-site. Greater than 100kg (approximately 27 gallons) of diesel is recycled each month. A Recyclable Materials Report has not been submitted to HMCD for these recycling activities. For assistance completing the Recyclable Materials Report, contact Molly Pritz at molly.pritz@cep.sccgov.org.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

Failure of any person who recycles more than 100 kilograms per month of recyclable material under a claim that the material qualifies for exclusion or exemption, to submit recyclable materials report every two years.

NOTES TO FACILITY: 1) Ensure that all hazardous materials/wastes in the HMBP are reported in the physical state at which they are stored (compressed gases = cubic feet, liquids = gallons, solids = pounds), unless the material is an extremely hazardous substance, as defined in Section 355.61 of Title 40 of the Code of Federal Regulations, then the material shall be reported in pounds, regardless of the physical state in which it is stored [HSC 25507(a)(1)]. 2) HMBP employee training records were not available for review during the facility walk through on 3/30/2017, but provided today just before report issuance. Ensure that HMBP employee training records are retained for three years and are readily available for review during inspection going forward [HSC 25505(a)(4)]. On-site to conduct a routine hazardous materials business plan (HMBP) inspection with Hazardous Materials Specialist, Andrew Dyer. The following hazardous materials/wastes were observed in [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

On-site to conduct a routine hazardous waste inspection with Hazardous Materials Specialist, Andrew Dyer. The facility walk through occurred on 3/30/2017, but facility employees stated that records were unable to be reviewed due to the effects of the February, 2017 flood, so records review was delayed until today. The facility is a "pick-n-pull" automotive dismantler that acquires vehicles, removes all hazardous wastes and fluids, and sells automotive parts, and a small quantity of intact vehicles, to customers. The customers "pick" the automotive part they would like to buy and it is removed from the vehicle. After approximately three weeks, the remaining vehicles and automotive parts are crushed on-site and sent for recycling. In addition to automotive dismantling activities, the facility operates a used oil collection center where the public can drop-off small quantities of used oil for proper management. The facility does not record the quantity of used oil generated [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

While on-site to conduct a routine hazardous waste inspection with Hazardous Materials Specialist, Andrew Dyer, it was observed that the facility extracts the gasoline and diesel from scrapped vehicles by puncturing the fuel tanks and allowing them to drain into a collection container. The gasoline is then pumped into one of three 500 gallon aboveground tanks and the diesel is pumped into the one 500 gallon aboveground tank. Per facility staff, the "reclaimed gasoline" is picked up by Lamb Fuels, who processes and recycles the gasoline for re-sale as a usable gasoline product. The diesel is reclaimed and used on-site. No additional information regarding the reclaimed gasoline and diesel was available during the facility walk through on 3/30/2017. The facility walk through was conducted on 3/30/2017 and the inspection report reviewed and issued on 5/1/2017. The delay in report issuance is because facility employees stated that all records and files were destroyed during the [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

I was on site, on March 30, 2017 at 1065 Commercial Street, Klauer's Pick n Pull, with Molly Pritz, HMS-II, from this office, for the 2017 APSA FACILITY-SPCC TEMPLATE (<10,000 GAL CAP) Permit Inspection. This is in conjunction with Molly Pritz of this office for the purposes of including the APSA Inspection along with the other permit inspections where she is lead. Today's APSA inspection confirmed this is a Tier 1 Qualified Facility based upon the volumes of materials stored on site. Some operations are doing fine, however there are areas of concern that are on-going. On-going discharge was observed in the vehicle tank fuel removing operation. Observations and records shall be reviewed to determine if this facility continues to be a Tier I Qualified Facility. March 30, 2017 was a facility walk-through, facilitated by David Steele, Production Supervisor, looking at the entire facility. We started with the customer waste fluids accumulation and drumming area, [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

I was on site today, 1065 Commercial Street, San Jose, for a follow-up inspection to the Aboveground Petroleum Storage Act, Routine Inspection conducted on 5/1/2017. Dave Keen, Production Supervisor, Pick-N-Pull #40, was on site to provide facility access and escort. On 5/1/2017 I observed that the fuel removal process from the incoming vehicles was losing a large percentage of fuel to the air and ground. See Notice of Inspection dated Since 5/1/2017, The San Jose Fire Department ordered that the operation be stopped. Today, a Chevrolet pick-up truck #2324, 7/22/17, 40-707-988, 1987 Chevrolet, on site in the "Gravel Holding Area", north of the "Drain Area", on the upper lot, was observed with fuel flowing from a punctured hole in the vehicle's gasoline tank. (see picture #1, attached) Molly Pritz witnessed me collecting the fuel as a sample to send to the lab for confirmation analyses. (See picture #2, attached) Two samples were collected (1-SCC and [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

UNRESOLVED ISSUES THAT REQUIRE FOLLOW-UP: 1) An unauthorized release of a hazardous material/waste (fuel from punctured fuel tank) to the environment was observed during today's inspection. All unauthorized releases must be reported IMMEDIATELY reported to the California Office of Emergency Services (CalOES) at 1-800-852-7550 and HMCD at 408-918-3400 [HSC 25510]. PROVIDE DOCUMENTATION BY 4:30PM ON WEDNESDAY, JULY 26, 2017, THAT THE FACILITY HAS REPORTED THE RELEASE AS REQUIRED. 2) Provide a photograph of the area where the fuel spill occurred after it has been cleaned up and a photograph of the waste properly contained in a hazardous waste container BY 4:30PM ON WEDNESDAY, JULY 26, 2017. 3) Provide the location in which vehicles are currently being punctured and drained to HMCD BY 4:30PM ON WEDNESDAY, JULY 26, 2017. 4) Provide a copy of the generator-copy of the Uniform Hazardous Waste Manifest used to transport the spilled fuel and gravel, dust, dirt saturated [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Notes:

Inspection conducted with Mickey Pierce. Facility area houses two departments (field services and maintenance) and will maintain separate permits for each department, but all waste and materials are stored in the same warehouse. Inspection of maintenance department commenced on 5/17/16 and included inspection of warehouse storage space, waste storage shed, service bays, and shared dumpsters. Facility fire extinguishers are annually serviced and facility has spill kits available. Emergency posting did not include contact numbers for any on-site staff but Mr. Pascua (mechanic) amended the posting at the time of inspection to include his contact information. Dumpsters behind shop contained cardboard boxes labeled as hazardous waste satellite accumulation areas for gram stains but boxes did not contain any gram stain materials upon inspection. Mr. Pascua stated that all antifreeze waste and oily rags are transported to the Newark location. Battery cores are exchanged and parts [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Violation Date: 06/08/2017 **Violation Source:** CERS
Violation Program: HW **Violation Division:** Santa Clara County Environmental Health
Citation: HSC 6.5 25250.7 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.7
Violation Notes:

Returned to compliance on 07/13/2017. The facility uses diesel for parts washing, then mixes the used diesel with used oil. The commingled waste stream is then managed as "used oil". Used diesel does not meet the definition of "used oil" and must be managed separately as hazardous waste. Otherwise, the commingled waste stream must be managed as fully-regulated hazardous waste.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

Failure to prevent intentional contamination of used oil with other hazardous waste other than minimal amounts of vehicle fuel.

Returned to compliance on 06/15/2017. The test boot was located on the gasoline product piping line and the open schraeder valve was facing the "12 o'clock" position. The test boot was pulled back during inspection to allow for leak detection at the earliest opportunity. This violation was corrected at the time of inspection. NO FURTHER ACTION IS NEEDED.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

Failure to maintain secondarily contained piping to allow liquid to flow into the sump in the event of a leak (i.e., failure to remove test boot).

Returned to compliance on 07/13/2017. 1) The facility uses cloth rags to for vehicle repair and maintenance work, then disposes of the used rags to the trash. 2) Cardboard heavily contaminated with used oil was observed during inspection. Mr. Luna stated that the facility disposes of the contaminated cardboard to the trash. 3) Absorbent is used to clean-up small spills of used oil, used antifreeze, diesel, and other automotive-related fluids. There is no collection container for used absorbent. Rags, cardboard, absorbent, and other debris contaminated with hazardous waste and hazardous materials may meet hazardous waste criteria or the definition of "used oil." A hazardous waste determination must be conducted, as outlined below, on each of the above-identified waste streams. If determined to meet hazardous waste criteria or the definition of "used oil," the waste stream(s) must be collected and managed as hazardous waste. Violation Notes:

Returned to compliance on 07/13/2017. Used coolant is routinely generated and accumulated in two 55 gallon drums behind the facility and one approximately 10 gallon cart in the work area. Per a review of the consolidated manifests and hazardous waste labels, used coolant frequently accumulates on-site for longer than 180 days (recent pick-ups: 3/3/2017, 3/10/2016, 12/8/2015, 2/3/2015, and 6/4/2014). If the facility downsizes used coolant accumulation to 55 gallons total and manages the container(s) at or near the point of waste generation, then the used coolant can accumulate on-site for one year. Otherwise, the used coolant cannot accumulate on-site for longer than 180 days.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.
(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).
(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Eval General Type: Compliance Evaluation Inspection
Eval Type: Routine done by local agency
Eval Division: Santa Clara County Environmental Health
Eval Program: HWLQG
Eval Source: CERS
Eval Notes:

Facility is no longer a large quantity generator of hazardous waste. Facility generates approximately 2200-2400 pounds of waste acetone per quarter, every 3 months. This is less than the LQG threshold of 270 gallons per month or 2200 pounds. Note: Acetone re-use for cleaning mixing containers is a new waste minimization effort being done now in order to reduce overall waste production. Also, Mike Joliff indicated that small spills in mixing areas are cleaned up daily, including spills of free liquids in secondary containment areas (i.e. bucket wash area).; Note: data in [EVAL Notes] field for some records is truncated from the source.

Site History:						

Regulatory closure received on January 1997 from SCVWD with residual concentrations of TPHg, Benzene and MTBE following removal of a 550 gallon gasoline UST on July 1985. A 1,000 gallon diesel UST was subsequently installed in the same location as the previous gasoline UST. On February 2006

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

the 1,000 gallon diesel UST was removed and soil samples collected from tank excavation showed the following contaminants:TPHmo 3,300 ppm, TPHg 57ppm, Benzene .0075 ppm and MTBE .0078 ppm at 10 1/2 fbg. Work plan with proposed scope of work including removal of petroleum hydrocarbon impacted soil, soil sampling and grab groundwater sampling was received by LOP and approved in letter dated February 17, 2009. Subsurface investigation has not taken place to date. The responsible party and its consultant have not uploaded or posted any site investigation, remediation and monitoring work plans and reports on GeoTracker as of 5/8/2012

Violation Program: HWLQG **Violation Division:** Santa Clara County Environmental Health
Citation: 22 CCR 15 66265.195(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.195(a)
Violation Notes:

Returned to compliance on 12/12/2014. Records demonstrating hazardous waste tanks are inspected daily were insufficient.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

- Failure of the owner or operator to conduct inspections and maintain inspection records at the facility of the following tank equipment:
- 1) Overfill/spill control equipment (e.g., waste-feed cutoff systems, bypass systems, and drainage systems) to ensure that it is in good working order;
 - 2) The aboveground portions of the tank system, if any, to detect corrosion or releases of waste;
 - 3) Data gathered from monitoring equipment and leak-detection equipment, (e.g., pressure and temperature gauges, monitoring wells) to ensure that the tank system is being operated according to its design;
 - 4) The construction materials and the area immediately surrounding the externally accessible portion of the tank system including secondary containment structures (e.g., dikes) to detect erosion or signs of releases of hazardous waste (e.g., wet spots, dead vegetation); and
 - 5) For uncovered tanks, the level of waste in the tank, to ensure compliance with section 66265.194(b)(3).

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Notes:

Returned to compliance on 04/16/2018. Facility uses annual SP001 tank inspection logs to satisfy tank integrity testing requirements. Logs are maintained by a third party vendor and facility did not have records available for inspection. Facility must maintain their own records to demonstrate compliance with tank integrity testing requirements.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

- "Failure to test or inspect each aboveground container for integrity based on industry standards as discussed in the SPCC Plan:
1. On a regular schedule.
 2. After making material repairs.
 3. Use non-destructive testing.
 4. Inspect each container?s supports, foundations, and outside for signs of deterioration, discharges, or accumulation of oil inside diked areas."

Returned to compliance on 04/16/2018. Description of security measures do not address security lighting.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

- Failure to describe in the SPCC Plan facility security measures including:
1. How access to the oil handling, processing, and storage areas is secured and controlled.
 2. How master flow and drain valves are secured.
 3. How unauthorized access to starter controls on oil pumps is prevented.
 4. How out-of-service and loading/unloading connections of oil pipelines is secured.
 5. The appropriateness of security lighting to both prevent acts of vandalism and assist in the discovery of oil discharges.

Violation Source: CERS
Violation Division: Santa Clara County Environmental Health
Violation Notes:

A hazardous waste tank assessment was not on file for review for the 500 gallon used oil tank.; Note: data in [Violation Notes] field for some records is truncated from the source.

Violation Description:

- Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information:
- (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed;
 - (2) Hazardous characteristics of the waste(s) to be handled;
 - (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of:
 - (A) Factors affecting the potential for corrosion, including but not limited to:
 1. Soil moisture content;
 2. Soil pH;
 3. Soil sulfides level;
 4. Soil resistivity;
 5. Structure to soil potential;
 6. Influence of nearby underground metal structures (e.g., piping);
 7. Stray electric current; and,
 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and
 - (B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following:
 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic;
 2. Corrosion-resistant coating (such as epoxy or fiberglass) with cathodic protection (e.g., impressed current or sacrificial anodes); and
 3. Electrical isolation devices such as insulating joints and flanges;
 - (4) For underground tank system components that are likely to be affected by vehicular traffic, a determination of design or operational measures that will protect the tank system against potential damage; and
 - (5) Design considerations to ensure that:
 - (A) Tank foundations will maintain the load of a full tank;
 - (B) Tank systems will be anchored to prevent flotation or dislodgement where the tank system is placed in a saturated zone, or is located within a seismic fault zone;
 - (C) Tank systems will withstand the effects of frost heave; and
 - (D) The installation of a corrosion protection system that is field fabricated shall be supervised by an independent corrosion expert to ensure proper installation.

Onsite today for follow-up inspection to prior inspection completed on 11/12/14, noted the following: -Drain Pans for used oil are properly labeled with detail information, including the words "Empty Daily." -Tank Inspections are being completed daily during normal business operations; additionally containers are being inspected weekly. -A binder is located in Jeff Cook's office with a log of used oil and waste coolant pick-ups, as well as copies of the consolidated manifests. The current used oil tank is being replaced with a new double wall steel 500 gallon tank. The new tank has a completed tank assessment, however, the tank has not yet been installed as the old tank is being closed through San Jose Fire Department and the new tank is in plan check process with building and permitting. Please provide final notification once tank installation is complete via email to jeffrey.higbee@deh.sccgov.org The new tank assessment was received today via Email from Jeff [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

acids and bases, laboratory packs, aqueous organic solutions, and solid wastes with organics. The facility accepts over 5 million gallons of waste per year, mostly industrial wastes with the exception of explosive, radioactive, or gas cylinders. It is authorized to store in containers and tanks. Treatment includes phase separation (organic solvents, water, and oil), neutralization, aqueous metal precipitation, fuel blending (organic solvents with fuel value), solvent distillation, and consolidation of these waste streams.

The San Francisco Regional Water Quality Control Board is the lead agency for Corrective Action in accordance with SB1082. Soil and groundwater remediation for volatile organic compounds has been in operation for over a decade. Groundwater is pumped from both beneath the site and offsite and is then treated on-site before being discharged to the sanitary sewer.

QUARTELRY UPDATE

Quarterly Update Period: July to September 2018

DTSC is reviewing the Clean Harbor permit renewal application and anticipates completing the technical review and issuing the first Notice of Deficiency (NOD) in December 2018. DTSC is working with the CEQA Unit to prepare the necessary documents to comply with CEQA.

DTSC received a permit renewal application from Clean Harbors on August 10, 2012 to continue operating an offsite hazardous waste storage and treatment facility. The application was determined to be administratively complete on December 13, 2012 and is now under technical review. The application is currently under review by DTSC. If the application is determined to be complete, DTSC will then prepare a draft permit for public review and comment.

FACILITY DESCRIPTION/HISTORY

The Clean Harbors San Jose facility is located at 1021 Berryessa Road, San Jose, Santa Clara County, California. The facility is in North San Jose on the northwest side of Berryessa Road, easterly of US Interstate Highway 101 and westerly of Coyote Creek. It occupies 2.9 acres of land in an area

<i>Map Key</i>	<i>Number of Records</i>	<i>Direction</i>	<i>Distance (mi/ft)</i>	<i>Elev/Diff (ft)</i>	<i>Site</i>	<i>DB</i>

zoned Heavy Industrial (M-4). US 101 runs within 500 feet of the facility.

Single family and multi-family residences are located within 1,000 feet of the facility to the south across US 101. Mobile home residences are located approximately one-half mile north of the site. The closest school to the facility is approximately three fourths of a mile of 3,600 feet. Surrounding land uses include a Chevron gasoline storage facility directly south of the site, an auto recycling facility to the east, an industrial park to the north, and a truck warehouse and truck maintenance shop to the west. The site is completely paved and graded to control run-off. The topography of the area is generally flat.

The Clean Harbors San Jose facility is a permitted offsite hazardous waste storage and treatment facility. The hazardous waste management operations have been at this location since 1974, previously under the names of Solvent Services Inc. and Safety Kleen Corp. Clean Harbors accepts aqueous acids and bases, laboratory packs, aqueous organic solutions, and solid wastes with organics. The facility accepts over 5 million gallons of waste per year, mostly industrial wastes with the exception of explosive, radioactive, or gas cylinders. It is authorized to store in containers and tanks. Treatment includes phase separation (organic solvents, water, and oil), neutralization, aqueous metal precipitation, fuel blending (organic solvents with fuel value), solvent distillation, and consolidation of these waste streams.

PERMITTING REGULATORY DESCRIPTION/HISTORY

Clean Harbors was first issued a RCRA-equivalent Hazardous Waste Facility Permit in 1983 under the name Solvent Services, Inc. This permit expired on October 13, 1988. The facility submitted a timely application on February 13, 1987. The RCRA-equivalent permit renewal became effective December 27 1989 with an expiration date of December 26, 1999. Since the permit was issued in 1999, Clean Harbors has made five Class I Permit Modifications for minor changes to the operating procedures and a name change from Solvent Services, Inc. to Clean Harbors San Jose, LLC; and two Class 2 Permit Modifications for the addition of units. One Class 1 Permit Modification for replacement of a drum crusher is still in progress. Clean Harbors submitted a renewal application in June 1999. The second renewal permit became effective February 10, 2003 with an expiration date of February 9, 2013. DTSC received a permit renewal application from Clean Harbors on August 10, 2012 to continue operating an offsite hazardous waste storage and treatment facility. The application was determined to be administratively complete on December 13, 2012 and is now under technical review. If the application is determined to be complete, DTSC will then prepare a draft permit for public review and comment.

The San Francisco Regional Water Quality Control Board is the lead agency for Corrective Action in accordance with SB1082. Soil and groundwater remediation for volatile organic compounds has been in operation for over a decade. Groundwater is pumped from both beneath the site and offsite and is then treated on-site before being discharged to the sanitary sewer.

QUARTELRY UPDATE
 Quarterly Update Period: July to September 2018
 DTSC is reviewing the Clean Harbor permit renewal application and anticipates completing the technical review and issuing the first Notice of Deficiency (NOD) in December 2018. DTSC is working with the CEQA Unit to prepare the necessary documents to comply with CEQA.

DTSC received a permit renewal application from Clean Harbors on August 10, 2012 to continue operating an offsite hazardous waste storage and treatment facility. The application was determined to be administratively complete on December 13, 2012 and is now under technical review. The application is currently under review by DTSC. If the application is determined to be complete, DTSC will then prepare a draft permit for public review and comment.

FACILITY DESCRIPTION/HISTORY

The Clean Harbors San Jose facility is located at 1021 Berryessa Road, San Jose, Santa Clara County, California. The facility is in North San Jose on the northwest side of Berryessa Road, easterly of US Interstate Highway 101 and westerly of Coyote Creek. It occupies 2.9 acres of land in an area zoned Heavy Industrial (M-4). US 101 runs within 500 feet of the facility.

Single family and multi-family residences are located within 1,000 feet of the facility to the south across US 101. Mobile home residences are located approximately one-half mile north of the site. The closest school to the facility is approximately three fourths of a mile of 3,600 feet. Surrounding land uses include a Chevron gasoline storage facility directly south of the site, an auto recycling facility to the east, an industrial park to the north, and a truck warehouse and truck maintenance shop to the west. The site is completely paved and graded to control run-off. The topography of the area is generally

flat.

The Clean Harbors San Jose facility is a permitted offsite hazardous waste storage and treatment facility. The hazardous waste management operations have been at this location since 1974, previously under the names of Solvent Services Inc. and Safety Kleen Corp. Clean Harbors accepts aqueous acids and bases, laboratory packs, aqueous organic solutions, and solid wastes with organics. The facility accepts over 5 million gallons of waste per year, mostly industrial wastes with the exception of explosive, radioactive, or gas cylinders. It is authorized to store in containers and tanks. Treatment includes phase separation (organic solvents, water, and oil), neutralization, aqueous metal precipitation, fuel blending (organic solvents with fuel value), solvent distillation, and consolidation of these waste streams.

PERMITTING REGULATORY DESCRIPTION/HISTORY

Clean Harbors was first issued a RCRA-equivalent Hazardous Waste Facility Permit in 1983 under the name Solvent Services, Inc. This permit expired on October 13, 1988. The facility submitted a timely application on February 13, 1987. The RCRA-equivalent permit renewal became effective December 27 1989 with an expiration date of December 26, 1999. Since the permit was issued in 1999, Clean Harbors has made five Class I Permit Modifications for minor changes to the operating procedures and a name change from Solvent Services, Inc. to Clean Harbors San Jose, LLC; and two Class 2 Permit Modifications for the addition of units. One Class 1 Permit Modification for replacement of a drum crusher is still in progress. Clean Harbors submitted a renewal application in June 1999. The second renewal permit became effective February 10, 2003 with an expiration date of February 9, 2013. DTSC received a permit renewal application from Clean Harbors on August 10, 2012 to continue operating an offsite hazardous waste storage and treatment facility. The application was determined to be administratively complete on December 13, 2012 and is now under technical review. If the application is determined to be complete, DTSC will then prepare a draft permit for public review and comment.

The San Francisco Regional Water Quality Control Board is the lead agency for Corrective Action in accordance with SB1082. Soil and groundwater remediation for volatile organic compounds has been in operation for over a decade. Groundwater is pumped from both beneath the site and offsite and is then treated on-site before being discharged to the sanitary sewer.

QUARTELRY UPDATE
 Quarterly Update Period: July to September 2018
 DTSC is reviewing the Clean Harbor permit renewal application and anticipates completing the technical review and issuing the first Notice of Deficiency (NOD) in December 2018. DTSC is working with the CEQA Unit to prepare the necessary documents to comply with CEQA.

DTSC received a permit renewal application from Clean Harbors on August 10, 2012 to continue operating an offsite hazardous waste storage and treatment facility. The application was determined to be administratively complete on December 13, 2012 and is now under technical review. The application is currently under review by DTSC. If the application is determined to be complete, DTSC will then prepare a draft permit for public review

and comment.

FACILITY DESCRIPTION/HISTORY

The Clean Harbors San Jose facility is located at 1021 Berryessa Road, San Jose, Santa Clara County, California. The facility is in North San Jose on the northwest side of Berryessa Road, easterly of US Interstate Highway 101 and westerly of Coyote Creek. It occupies 2.9 acres of land in an area zoned Heavy Industrial (M-4). US 101 runs within 500 feet of the facility.

Single family and multi-family residences are located within 1,000 feet of the facility to the south across US 101. Mobile home residences are located approximately one-half mile north of the site. The closest school to the facility is approximately three fourths of a mile of 3,600 feet. Surrounding land uses include a Chevron gasoline storage facility directly south of the site, an auto recycling facility to the east, an industrial park to the north, and a truck warehouse and truck maintenance shop to the west. The site is completely paved and graded to control run-off. The topography of the area is generally flat.

The Clean Harbors San Jose facility is a permitted offsite hazardous waste storage and treatment facility. The hazardous waste management operations have been at this location since 1974, previously under the names of Solvent Services Inc. and Safety Kleen Corp. Clean Harbors accepts aqueous acids and bases, laboratory packs, aqueous organic solutions, and solid wastes with organics. The facility accepts over 5 million gallons of waste per year, mostly industrial wastes with the exception of explosive, radioactive, or gas cylinders. It is authorized to store in containers and tanks. Treatment includes phase separation (organic solvents, water, and oil), neutralization, aqueous metal precipitation, fuel blending (organic solvents with fuel value), solvent distillation, and consolidation of these waste streams.

PERMITTING REGULATORY DESCRIPTION/HISTORY

Clean Harbors was first issued a RCRA-equivalent Hazardous Waste Facility Permit in 1983 under the name Solvent Services, Inc. This permit expired on October 13, 1988. The facility submitted a timely application on February 13, 1987. The RCRA-equivalent permit renewal became effective December 27 1989 with an expiration date of December 26, 1999. Since the permit was issued in 1999, Clean Harbors has made five Class I Permit Modifications for minor changes to the operating procedures and a name change from Solvent Services, Inc. to Clean Harbors San Jose, LLC; and two Class 2 Permit Modifications for the addition of units. One Class 1 Permit Modification for replacement of a drum crusher is still in progress. Clean Harbors submitted a renewal application in June 1999. The second renewal permit became effective February 10, 2003 with an expiration date of February 9, 2013. DTSC received a permit renewal application from Clean Harbors on August 10, 2012 to continue operating an offsite hazardous waste storage and treatment facility. The application was determined to be administratively complete on December 13, 2012 and is now under technical review. If the application is determined to be complete, DTSC will then prepare a draft permit for public review and comment.

The San Francisco Regional Water Quality Control Board is the lead agency for Corrective Action in accordance with SB1082. Soil and groundwater remediation for volatile organic compounds has been in operation for over a decade. Groundwater is pumped from both beneath the site and offsite and is then treated on-site before being discharged to the sanitary sewer.

Clean Harbors currently owns and operates the waste-chemical storage, treatment, and recycling facility at the Site. The facility has been in operation since 1975 under several different owners including Solvent Services Company (now dissolved) and Safety-Kleen Corporation (currently in bankruptcy). Clean Harbors purchased the Site in 2002. Plume/Contaminant Description: Extremely high concentrations of VOCs (1,500,000 ppm) and 23,000 ppb of 1,4-dioxane in the groundwater, Soil Description: Extremely high concentrations of VOCs and 1,4-dioxane in the soil underneath the facility. The extent of soil and groundwater pollution has been fully defined. In January 2008 the "Source Area Feasibility Study" was submitted to the RWQCB. This study evaluated the feasibility of several remedial technologies and concluded that in-situ biological remediation using in-situ bioreactors (ISBRs) was the preferred remedy for the source area. Cleanup actions taken at the Site include 1) removal of all underground storage tanks and associated soil, 2)

operation of a steam injection and vapor extraction system, 3) operation of a groundwater extraction system using wells and trenches, 4) operation of an in-situ bioremediation system in May 2013 The HVAC system at the office building has been modified to mitigate the VOCs that were detected in indoor air testing conducted in April 2015. Indoor air samples collected in August 2015 and March 2016 indicate that the potential risk has been mitigated by operating the HVAC. Additional indoor air testing is required.

Waste Code Description:					PETROLEUM REFINERY SECONDARY (EMULSIFIED) OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE AND/OR FLOAT GENERATED FROM THE PHYSICAL AND/OR CHEMICAL SEPARATION OF OIL/WATER/SOLIDS IN PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH WASTES INCLUDE, BUT ARE NOT LIMITED TO, ALL SLUDGES AND FLOATS GENERATED IN INDUCED AIR FLOTATION (IAF) UNITS, TANKS AND IMPOUNDMENTS, AND ALL SLUDGES GENERATED IN DAF UNITS. SLUDGES GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND F037, K048, AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.	
Hazardous Waste Code:					F035	
Waste Code Description:					WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT USE INORGANIC PRESERVATIVES CONTAINING ARSENIC OR CHROMIUM. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.	
Hazardous Waste Code:					F010	
Waste Code Description:					QUENCHING BATH RESIDUES FROM OIL BATHS FROM METAL HEAT TREATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.	
Hazardous Waste Code:					F007	
Waste Code Description:					SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.	
Hazardous Waste Code:					F006	
Waste Code Description:					WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

 Handler Name: CLEAN HARBORS SAN JOSE
 Generator Status Universe: Large Quantity Generator
 Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: U411
 Waste Code Description: PHENOL, 2-(1-METHYLETHOXY)-, METHYLCARBAMATE (OR) PROPOXUR

Hazardous Waste Code: U394
 Waste Code Description: A2213 (OR) ETHANIMIDOTHIOIC ACID, 2-(DIMETHYLAMINO)-N-HYDROXY-2-OXO-, METHYL ESTER

Hazardous Waste Code: U238
 Waste Code Description: CARBAMIC ACID, ETHYL ESTER (OR) ETHYL CARBAMATE (URETHANE)

Hazardous Waste Code: U236
 Waste Code Description: 2,7-NAPHTHALENEDISULFONIC ACID,3,3'-[(3,3'-DIMETHYL[1,1'-BIPHENYL]-4,4'-DIYL)BIS(AZO)BIS[5-AMINO-4-HYDROXY]-, TETRASODIUM SALT (OR) TRYPAN BLUE

Hazardous Waste Code: U227
 Waste Code Description: 1,1,2-TRICHLOROETHANE (OR) ETHANE, 1,1,2-TRICHLORO-

Hazardous Waste Code: U215
 Waste Code Description: CARBONIC ACID, DITHALLIUM(1+) SALT (OR) THALLIUM(I) CARBONATE

Hazardous Waste Code: U207
 Waste Code Description: 1,2,4,5-TETRACHLORO BENZENE (OR) BENZENE, 1,2,4,5-TETRACHLORO-

Hazardous Waste Code: U206
 Waste Code Description: D-GLUCOSE, 2-DEOXY-2-[[[(METHYLNITROSOAMINO)-CARBONYL]AMINO]- (OR) GLUCOPYRANOSE, 2-DEOXY-2-(3-METHYL-3-NITROSOUREIDO)-,D- (OR) STREPTOZOTOCIN

Hazardous Waste Code: U205
 Waste Code Description: SELENIUM SULFIDE (OR) SELENIUM SULFIDE SES2 (R,T)

Hazardous Waste Code: U203
 Waste Code Description: 1,3-BENZODIOXOLE, 5-(2-PROPENYL)- (OR) SAFROLE

Hazardous Waste Code: U196
 Waste Code Description: PYRIDINE

Hazardous Waste Code: U194
 Waste Code Description: 1-PROPANAMINE (I,T) (OR) N-PROPYLAMINE (I,T)

Hazardous Waste Code: U190
 Waste Code Description: 1,3-ISOBENZOFURANDIONE (OR) PHTHALIC ANHYDRIDE

Hazardous Waste Code: U177
 Waste Code Description: N-NITROSO-N-METHYLUREA (OR) UREA, N-METHYL-N-NITROSO-

Hazardous Waste Code: U166
 Waste Code Description: 1,4-NAPHTHALENEDIONE (OR) 1,4-NAPHTHOQUINONE

Waste Code Details

Hazardous Waste Code:	U018
Waste Code Description:	BENZ[A]ANTHRACENE
Hazardous Waste Code:	U019
Waste Code Description:	BENZENE (I,T)
Hazardous Waste Code:	U020
Waste Code Description:	BENZENESULFONIC ACID CHLORIDE (C,R) (OR) BENZENESULFONYL CHLORIDE (C,R)
Hazardous Waste Code:	U051
Waste Code Description:	CREOSOTE
Hazardous Waste Code:	U057
Waste Code Description:	CYCLOHEXANONE (I)
Hazardous Waste Code:	U059
Waste Code Description:	5,12-NAPHTHACENEDIONE, 8-ACETYL-10-[(3-AMINO-2,3,6-TRIDEOXY)-ALPHA-L-LYXO-HEXOPYRANOSYL)OXY]-7,8,9,10-TETRAHYDRO-6,8,11-TRIHYDROXY-1-METHOXY-, (8S-CIS)- (OR) DAUNOMYCIN
Hazardous Waste Code:	U067
Waste Code Description:	ETHANE, 1,2-DIBROMO- (OR) ETHYLENE DIBROMIDE
Hazardous Waste Code:	U070
Waste Code Description:	BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE
Hazardous Waste Code:	U078
Waste Code Description:	1,1-DICHLOROETHYLENE (OR) ETHENE, 1,1-DICHLORO-
Hazardous Waste Code:	U081
Waste Code Description:	2,4-DICHLOROPHENOL (OR) PHENOL, 2,4-DICHLORO-
Hazardous Waste Code:	U084
Waste Code Description:	1,3-DICHLOROPROPENE (OR) 1-PROPENE, 1,3-DICHLORO-
Hazardous Waste Code:	U085
Waste Code Description:	1,2:3,4-DIEPOXYBUTANE (I,T) (OR) 2,2'-BIOXIRANE
Hazardous Waste Code:	U105
Waste Code Description:	2,4-DINITROTOLUENE (OR) BENZENE, 1-METHYL-2,4-DINITRO-
Hazardous Waste Code:	U127
Waste Code Description:	BENZENE, HEXACHLORO- (OR) HEXACHLOROBENZENE
Hazardous Waste Code:	U129
Waste Code Description:	CYCLOHEXANE, 1,2,3,4,5,6-HEXACHLORO-, (1ALPHA, 2ALPHA, 3BETA, 4ALPHA, 5ALPHA, 6BETA)- (OR) LINDANE
Hazardous Waste Code:	K043
Waste Code Description:	2,6-DICHLOROPHENOL WASTE FROM THE PRODUCTION OF 2,4-D.
Hazardous Waste Code:	K042
Waste Code Description:	HEAVY ENDS OR DISTILLATION RESIDUES FROM THE DISTILLATION OF TETRACHLOROBENZENE IN THE PRODUCTION OF 2,4,5-T.
Hazardous Waste Code:	K031
Waste Code Description:	BY-PRODUCT SALTS GENERATED IN THE PRODUCTION OF MSMA AND CACODYLIC ACID.

Hazardous Waste Code: Waste Code Description:					K028 SPENT CATALYST FROM THE HYDROCHLORINATOR REACTOR IN THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.	
Hazardous Waste Code: Waste Code Description:					K025 DISTILLATION BOTTOMS FROM THE PRODUCTION OF NITROBENZENE BY THE NITRATION OF BENZENE.	
Hazardous Waste Code: Waste Code Description:					K015 STILL BOTTOMS FROM THE DISTILLATION OF BENZYL CHLORIDE.	
Hazardous Waste Code: Waste Code Description:					F025 CONDENSED LIGHT ENDS, SPENT FILTERS AND FILTER AIDS, AND SPENT DESICCANT WASTES FROM THE PRODUCTION OF CERTAIN CHLORINATED ALIPHATIC HYDROCARBONS BY FREE RADICAL CATALYZED PROCESSES. THESE CHLORINATED ALIPHATIC HYDROCARBONS ARE THOSE HAVING CARBON CHAIN LENGTHS RANGING FROM ONE TO, AND INCLUDING FIVE, WITH VARYING AMOUNTS AND POSITIONS OF CHLORINE SUBSTITUTION.	
Hazardous Waste Code: Waste Code Description:					F024 PROCESS WASTES INCLUDING, BUT NOT LIMITED TO, DISTILLATION RESIDUES, HEAVY ENDS, TARS, AND REACTOR CLEAN-OUT WASTES FROM THE PRODUCTION OF CERTAIN CHLORINATED ALIPHATIC HYDROCARBONS BY FREE RADICAL CATALYZED PROCESSES. THESE CHLORINATED ALIPHATIC HYDROCARBONS ARE THOSE HAVING CARBON CHAIN LENGTHS RANGING FROM ONE TO, AND INCLUDING FIVE, WITH VARYING AMOUNTS AND POSITIONS OF CHLORINE SUBSTITUTION. (THIS LISTING DOES NOT INCLUDE WASTEWATERS, WASTEWATER TREATMENT SLUDGE, SPENT CATALYSTS, AND WASTES LISTED IN SECTIONS 261.31. OR 261.32)	
Hazardous Waste Code: Waste Code Description:					F009 SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.	
Hazardous Waste Code: Waste Code Description:					F007 SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.	
Hazardous Waste Code: Waste Code Description:					D037 PENTACHLOROPHENOL	
Hazardous Waste Code: Waste Code Description:					D020 CHLORDANE	
Hazardous Waste Code: Waste Code Description:					D011 SILVER	
Hazardous Waste Code: Waste Code Description:					K051 API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.	
Hazardous Waste Code: Waste Code Description:					K090 EMISSION CONTROL DUST OR SLUDGE FROM FERROCHROMIUMSILICON PRODUCTION.	
Hazardous Waste Code: Waste Code Description:					K096 HEAVY ENDS FROM THE HEAVY ENDS COLUMN FROM THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.	
Hazardous Waste Code: Waste Code Description:					K142 TANK STORAGE RESIDUES FROM THE PRODUCTION OF COKE FROM COAL OR FROM THE RECOVERY OF COKE BY-PRODUCTS FROM COAL.	
Hazardous Waste Code: Waste Code Description:					K143 PROCESS RESIDUES FROM THE RECOVERY OF LIGHT OIL, INCLUDING, BUT NOT LIMITED TO, THOSE GENERATED IN STILLS, DECANTERS, AND WASH OIL RECOVERY UNITS FROM THE RECOVERY OF COKE BY-PRODUCTS PRODUCED FROM COAL.	
Hazardous Waste Code: Waste Code Description:					K149 DISTILLATION BOTTOMS FROM THE PRODUCTION OF ALPHA (OR METHYL-) CHLORINATED TOLUNES, RING-CHLORINATED TOLUNES, BENZOYL CHLORIDES, AND COMPOUNDS WITH MIXTURES OF THESE FUNCTIONAL GROUPS. [THIS WASTE DOES NOT INCLUDE STILL BOTTOMS FROM THE DISTILLATION OF BENZOYL CHLORIDE]	
Hazardous Waste Code: Waste Code Description:					K151 WASTEWATER TREATMENT SLUDGES, EXCLUDING NEUTRALIZATION AND BIOLOGICAL SLUDGES, GENERATED DURING THE TREATMENT OF WASTEWATERS FROM THE PRODUCTION OF ALPHA (OR

Hazardous Waste Code: Waste Code Description:					U132 HEXACHLOROPHENE (OR) PHENOL, 2,2'-METHYLENEBIS[3,4,6-TRICHLORO-	
Hazardous Waste Code: Waste Code Description:					K050 HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.	
Hazardous Waste Code: Waste Code Description:					K049 SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.	
Hazardous Waste Code: Waste Code Description:					K009 DISTILLATION BOTTOMS FROM THE PRODUCTION OF ACETALDEHYDE FROM ETHYLENE.	
Hazardous Waste Code: Waste Code Description:					K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATERS FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.	
Hazardous Waste Code: Waste Code Description:					F035 WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT USE INORGANIC PRESERVATIVES CONTAINING ARSENIC OR CHROMIUM. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.	
Hazardous Waste Code: Waste Code Description:					F032 WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT CURRENTLY USE, OR HAVE PREVIOUSLY USED, CHLOROPHENOLIC FORMULATIONS [EXCEPT POTENTIALLY CROSS-CONTAMINATED WASTES THAT HAVE HAD THE F032 WASTE CODE DELETED IN ACCORDANCE WITH SECTION 261.35 (I.E., THE NEWLY PROMULGATED EQUIPMENT CLEANING OR REPLACEMENT STANDARDS), AND WHERE THE GENERATOR DOES NOT RESUME OR INITIATE USE OF CHLOROPHENOLIC FORMULATIONS]. (THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.)	
Hazardous Waste Code: Waste Code Description:					F027 DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)	
Hazardous Waste Code:					F020

Hazardous Waste Code:					K093	
Waste Code Description:					DISTILLATION LIGHT ENDS FROM THE PRODUCTION OF PHTHALIC ANHYDRIDE FROM ORTHO-XYLENE.	
Hazardous Waste Code:					K095	
Waste Code Description:					DISTILLATION BOTTOMS FROM THE PRODUCTION OF 1,1,1-TRICHLOROETHANE.	
Hazardous Waste Code:					K097	
Waste Code Description:					VACUUM STRIPPER DISCHARGE FROM THE CHLORDANE CHLORINATOR IN THE PRODUCTION OF CHLORDANE.	
Hazardous Waste Code:					K098	
Waste Code Description:					UNTREATED PROCESS WASTEWATER FROM THE PRODUCTION OF TOXAPHENE.	
Hazardous Waste Code:					K104	
Waste Code Description:					COMBINED WASTEWATERS GENERATED FROM NITROBENZENE/ANILINE PRODUCTION.	
Hazardous Waste Code:					K109	
Waste Code Description:					SPENT FILTER CARTRIDGES FROM PRODUCT PURIFICATION FROM THE PRODUCT OF 1,1-DIMETHYLHYDRAZINE FROM CARBOXYLIC ACID HYDRAZIDES.	
Hazardous Waste Code:					K111	
Waste Code Description:					PRODUCT WASHWATERS FROM THE PRODUCTION OF DINITROTOLUENE VIA NITRATION OF TOLUENE.	
Hazardous Waste Code:					K123	
Waste Code Description:					PROCESS WASTEWATER (INCLUDING SUPERNATES, FILTRATES, AND WASHWATERS) FROM THE PRODUCTION OF ETHYLENEBISDITHIOCARBAMIC ACID AND ITS SALTS.	
Hazardous Waste Code:					K126	
Waste Code Description:					BAGHOUSE DUST AND FLOOR SWEEPINGS IN MILLING AND PACKAGING OPERATIONS FROM PRODUCTION OR FORMULATION OF ETHYLENEBISDITHIOCARBAMIC ACID AND ITS SALTS.	
Hazardous Waste Code:					K141	
Waste Code Description:					PROCESS RESIDUES FROM THE RECOVERY OF COAL TAR, INCLUDING, BUT NOT LIMITED TO, TAR COLLECTING SUMP RESIDUES FROM THE PRODUCTION OF COKE FROM COAL OR THE RECOVERY OF COKE BY-PRODUCTS PRODUCED FROM COAL. THIS LISTING DOES NOT INCLUDE K087 (DECANTER TANK SLUDGE FROM COKING OPERATIONS).	
Hazardous Waste Code:					K145	
Waste Code Description:					RESIDUES FROM NAPHTHALENE COLLECTION AND RECOVERY OPERATIONS FROM THE RECOVERY OF COKE BY-PRODUCTS PRODUCED FROM COAL.	
Hazardous Waste Code:					K159	
Waste Code Description:					ORGANICS FROM THE TREATMENT OF THIOCARBAMATE WASTES.	
Hazardous Waste Code:					K174

Site History:						

Background The subject site was used as a bulk fuel operation. The record is not clear as to when the bulk fuel operation began operating, but it could date back to the 19th century although there is some evidence it may have started in the 1920s. No records of original tank installations are known to exist. The site was also used as a retail fuel dispensing facility doing business as Spartan Service Center. Currently the site is occupied by a two story storage business. 1993 Six soil borings were installed. Free product was reported in each of the borings. Nine USTs were removed from the site. Soil samples collected beneath the former USTs detected up to 6,000 ppm TPH-g and 7,500 ppm TPH-d. 1994 Six above ground fuel storage tanks were removed from the site. 1995-96 Three exploratory trenches were excavated to assess the lateral and vertical extent of contamination. Groundwater was encountered at 26 feet bgs. TPH-g and TPH-d were detected at concentrations up to 24,000 ppm in soil. In April 1996, five monitoring wells were installed. Floating product was noted in the vicinity of MW-1 and MW-3, and in boring B-1. In soil up to 7.8 ppm TPH-g, 210 ppm TPH-d, and 0.31 ppm benzene were detected. In groundwater collected from MW-4 TPH-g and TPH-d were detected at 110 and 450 ppb, respectively. It was noted that groundwater flow was toward the west which is in the direction of a school which borders the western side of the site. In November 1996, two additional groundwater monitoring wells were installed to assess the downgradient extent of the contaminant plume. . In soil up to 1,400 ppm TPH-g and 570 ppm TPH-d were detected. A groundwater sample collected from B-4 contained 15,000 ppb TPH-g, 690 ppb MTBE, and 990 ppb Benzene. 1998 An excavation to remove contaminated soil took place in 1998. The excavation reached a depth of 14 to 16 feet below ground surface. Impacted soil was excavated and stockpiled on-site. Off-hauling took place in two stages: the first stage removed 1516 tons of soil and the second 648 tons. Off-hauled soil was transported to Forward landfill in Manteca CA. 2006 From June 6, 2006 to December 28, 2006 a SVE system was operating. During the six months the system operated approximately 5.91 gallons of hydrocarbons were removed. The system was turned off due to inefficient extraction results.

Local Agency:
Potential Cont of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Potential Media Affected: Other Groundwater (uses other than drinking water)
How Discovered Description:
Stop Description:
Cal Water Watershed Name: Santa Clara - Coyote Creek (205.30)
DWR Groundwater Subbasin: Santa Clara Valley - Santa Clara (2-009.02)
Site History:

Site address is also 751 Commercial Street, San Jose. 2003 - In February, the Regional Water Quality Control Board (RWQCB) requested an investigation be conducted to determine if MtBE had impacted groundwater at this site due to its location relative to a water supply well. In July, 10 Geoprobe borings (GP1 through GP10) were advanced onsite. Groundwater was not encountered in GP7 and GP8, but was encountered in the remaining borings between 19 and 28 ft bgs. 8 grab groundwater samples were collected and sampled for fuel oxygenates. Maximum concentrations were reported of 690 ppb MtBE and 890 ppb TBA in the sample collected in GP1 located on the northwestern corner of the site and downgradient of the existing tanks. The only other detection was 25 ppb MtBE in GP3, which is located downgradient of the dispenser islands. 2005 - In December, 3 monitoring wells (MW5 through MW7) were installed to 30 ft bgs onsite. It was not reported at what depth groundwater was encountered and was not noted on the boring logs. 6 soil samples were collected from each well and maximum concentrations were reported for soil samples collected from well MW6 located near boring GP3 and well MW7 located between boring GP1 and former well MW1. Maximum concentrations in soil were reported of 330 ppm TPHg and 38 ppm TPHd at 25 ft bgs in MW6 and 0.05 ppm MtBE and 0.23 ppm TBA at 20 ft bgs in MW7. Initial groundwater samples collected from these wells reported maximum concentrations of 1,200 ppb TPHg, 0.64 ppb Benzene, 0.59 ppb Ethylbenzene, 0.61 ppb Xylenes, 170 ppb MtBE, 240 ppb TBA, and 0.51 ppb 1,2-Dichloroethane (1,2-DCA). MtBE was the only constituent detected in all three wells, but was highest in well MW7 (and the highest TBA) and lowest in well MW5. Well MW6 had detections of the most constituents. 2011 - In February, the wells were sampled and reported to have maximum concentrations of 430 ppb TPHg, 120 ppb MtBE, and 380 ppb TBA in well MW6.

Site History:			

The site is located at 1020 Berryessa Road and currently operates as a Chevron Bulk Fuel Terminal. The terminal facility covers approximately 10 acres and consists of a retention pond, bulk fuel storage tanks, a pipeline-terminal center, buildings, and truck load-out facilities. The current site configuration is shown on the site plan. The fuel terminal, in operation since the mid-1960s, is used as a transfer station distributing motor fuel and jet fuel throughout the San Francisco Bay Area. The facility receives refined petroleum-hydrocarbon products from the Chevron Richmond Refinery by pipeline. This site is related to two separate cases under the Site Cleanup Program (CASE #: 2189.8309) and Waste Discharge Requirements (ORDER# 90-113). Information regarding the Site Cleanup Program case can be found at: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL374291196

Site History:			

The site is an operating Chevron bulk fuel terminal and consists of a retention pond, bulk fuel storage tanks, a pipeline-terminal center, buildings, and truck load-out facilities. Since the mid-1960s, the bulk fuel terminal has been in operation as a transfer station for the distribution of vehicular and jet fuels. The facility receives refined petroleum hydrocarbon products via pipeline from the Chevron refinery in Richmond, California. The products are stored at the bulk fuel facility in above ground storage tanks, and are subsequently distributed from the facility by tanker trucks to various locations. Several spills and leaks were reported for this site between February, 1984 and July, 1986. Reports of these spills and leaks were based on observation or detection of hydrocarbons (I--ICs) in soil and groundwater monitoring wells. The storage tanks and oil water separators may be sources for the leaks. Site Cleanup requirements were adopted for this site in January 1990. The Order included tasks for onsite investigation and remediation, offsite investigation and remediation, and final cleanup for both onsite and offsite. Investigation of the extent of the problem and installation of onsite interim remedial actions has been ongoing. This site is related to two separate cases under the Leaking Underground Storage Tank (CASE #: 43-0021) and Waste Discharge Requirements (ORDER# 90-113). Information regarding the Leaking Underground Storage Tank case can be found at: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0608500093

Site History:

The site parcel (APN 237-07-017) is approximately 39,640 square feet in area located in a commercial area of north central San Jose. See Figure 1 for a Site Area Topographic Map and Figure 2 for a Generalized Site Map. An existing restaurant (Burger King) is located in the southcentral area of the parcel. The majority of the lot is paved for customer parking, with limited landscaped areas. Former 12,000-gallon gasoline and 2,000-gallon diesel underground storage tanks (USTs) were located 40 to 50 feet outside the northeast corner of the existing building (Blaine 1985). The USTs were removed in July 1985. Areas of environmental concern for the site appear to be limited to residual soil and groundwater contamination related to the previous underground release of gasoline and diesel compounds from the former UST facility. Four groundwater monitoring wells (MW-1 through MW-4) each approximately 30 feet deep have been installed at the site. Soil Testing Data from UST Pit Samples, Exploratory Borings and Monitoring Well-Bores Up to 8,700 mg/Kg Total Petroleum Hydrocarbons as gasoline (TPHg), and up to 27 mg/Kg Total Petroleum Hydrocarbons as diesel (TPHd) were detected in soil samples collected by Blaine Tech Services from beneath the former gasoline and diesel USTs in July 1985. Elevated concentrations of TPHg (up to 2,070 mg/Kg) were additionally detected in soil samples collected after overexcavation on 12/03/85 by Chips Environmental Consultants. Petroleum impact to soil was confirmed by the detected concentrations of TPHg ranging between 160 mg/Kg to 280 mg/Kg, TPHd ranging between 55 mg/Kg to 1,100 mg/Kg, and trace concentrations of benzene (up to 2.8 mg/Kg) in soil samples collected vertically from soil boring EB-1 by Dugan Associates on 11/11/97. Dugan Associates installed four monitoring wells (MW-1 through MW-4) in June 1999. Concentrations of TPHg up 190 mg/Kg, TPHd up to 920 mg/Kg, and trace BTEX concentrations (up to 0.67 mg/Kg) were detected in soil samples collected from the well-bore for MW-1, which was drilled in the vicinity of the former elevated Blaine Tech Services samples, and Dugan Associates samples from boring EB-1. The gasoline additives EDB, 1,2-DCA, DIPE, ETBE, MTBE, TAME, and TBA do not appear to have impacted the soil at the site. The lateral and vertical extent of gasoline and diesel-impacted soils from the former leaky 12,000-gallon gasoline and 2,000-gallon diesel USTs appear to have been defined, and appears to be limited to the vicinity of the former USTs. Vertical control has been defined by soil sample S-MW1-30, collected 30 feet bgs in well-bore MW-1, where trace levels of TPHd (1.8 mg/Kg), benzene (0.01 mg/Kg), and non-detectable concentrations of TPHg, toluene, ethylbenzene, xylenes, and MTBE were reported. Lateral control has been defined by non-detectable concentrations in soil samples collected from MW-2, MW-3, and MW-4. Previous Groundwater Flow Direction and Groundwater Sampling Data The groundwater gradient beneath the site has been documented to be consistently in the westsouthwest direction (See Figure 3). Cumulative groundwater monitoring data for samples collected from wells MW-2, MW-3 and MW-4 have been below drinking water standards (below MCLs and taste-threshold levels for gasoline and diesel compounds). The lateral extent of gasoline and diesel-impacted groundwater beneath the site appears limited to the vicinity of the former USTs and MW-1. Cumulative groundwater monitoring data is presented in Table 2 and a time trend plot showing TPHg, TPHd, and benzene concentrations in MW-1 versus groundwater elevation is presented in Attachment C. Dual-Phase, High-vacuum Extraction Test (3-day event) GeoRestoration, Inc. (GRI) conducted a 3-day Dual-phase, High-vacuum Extraction Test (DPHVE) at the site in December 2004. The conclusions of that report indicated that the 3-day event only removed approximately 24 pounds of hydrocarbons from the site. GRI concluded that if the average hydrocarbon concentration of the water removed was 40 ppm (not measured but estimated from groundwater monitoring) 2,000-gallons of water would contain only 0.7 pounds of hydrocarbons. Continued SVE extraction would likely remove hundreds of additional pounds of hydrocarbons. However, drawing down the groundwater elevation is required to operate the SVE system, since the aquifer material is flooded. Such drawdown of groundwater will yield thousands of gallons of groundwater, requiring treatment and disposal of groundwater.

Site History:

1985 - In later reports, it is noted that 4 monitoring wells (2 groundwater and 2 vadose) were installed in June. Documentation of the well installation were not found in the file. 1989 - In October, the underground storage tanks (USTs) were precision tested and a gasoline and a diesel UST failed. 1990 - In July, the 4 USTs and piping were removed and replaced at the site. The USTs were reported to be in good condition upon removal. 12 soil samples were collected from approximately 11 feet below the ground surface (ft bgs) and were reported to contain low to non-detectable concentrations of the constituents of concern (COCs). It was reported that a monitoring well (MW3) was destroyed during the UST removal activities. Based on the presence of odors beneath the unleaded and diesel USTs, additional soil was removed to approximately 20 feet. The remainder of the excavation was deepened to 15 feet to accommodate the new USTs. 2 confirmation soil samples (UV1 and DC1) were collected and were not reported to have concentrations of the COCs present above the laboratory reporting limits. Approximately 600 cubic yards of soil were removed. Following removal of the piping, 4 soil samples were collected from 2-3 ft bgs and were reported to have maximum concentrations of 10,000 parts per million (ppm) Total Petroleum Hydrocarbons (TPH) as Gasoline (TPHg), 95 ppm Benzene, 690 ppm Toluene, 180 ppm Ethylbenzene, and 950 ppm Xylenes in sample P2. Sample P2 was collected beneath the northeastern fuel dispenser. Based on odors in this area, an exploration hole was dug and the impacted soil appeared to extend to at least 8 ft bgs. No soil samples were collected and the soil was replaced in the excavation. Approximately 50 cubic yards of soil were removed. Piping was installed parallel and adjacent to each pump island such that it could possibly be used in the future for remediation. The soil generated during this work was stockpiled onsite. The ultimate disposition of the soil was not reported. 1992 - In May, the Responsible Party filed for bankruptcy. 1993 - In January, 1 monitoring well (MW3) was installed to 45 ft bgs and 6 soil borings (B1 through B6) were also advanced onsite. 19 soil samples were collected and reported to contain low to non-detectable concentrations of the COCs. 3 monitoring wells (MW1 through MW3) were sampled and reported to have maximum concentrations of 0.51 parts per billion (ppb) Benzene, 1.4 ppb Toluene, and 0.54 ppb Xylenes. The detections were reported for the sample collected from well MW2 west of the USTs. 1994 - In December, periodic groundwater monitoring commenced at the site. No work was conducted at the site between 1996 and 1999. 1999 - In October, the dispensers were replaced at the site. 5 soil samples (S1 through S5) were collected and reported to contain a maximum concentration of 9,000 ppm TPH as Diesel (TPHd) in sample S4; all other COCs were not reported to be present above the laboratory reporting limits. Sample depths were not reported. In September, the monitoring wells were sampled and reported to contain up to 3.1 ppb Methyl tert-Butyl Ether (MtBE); all other COCs were not reported to be present above the laboratory reporting limits. No work was conducted at the site between 2000 and 2001. 2001 - In August, an enhanced leak detection test was run on the UST system at the site and the system failed. It reported that there were vapor releases occurring in the area of the fill/vapor recovery risers. In December, 9 geoprobe borings (GB1 through GB9) were advanced onsite for the collection of grab groundwater samples. 9 grab groundwater samples were collected and reported to contain maximum concentrations of 63 ppb TPHg, 4.1 ppb Ethylbenzene, 24 ppb Xylenes, and 11,000 ppb MtBE. The maximum MtBE concentration was

reported in the sample collected from boring GB3 located near the southwestern corner of the UST excavation. 2002 - In January, 3 soil borings (BH1 through BH3) and one well (MW4) were advanced onsite. 8 soil samples were collected and reported to have maximum concentrations of 1.7 ppm MtBE and 0.43 ppm Tert Butyl Alcohol (TBA). No work was conducted at the site between 2002 and 2004. Periodic groundwater monitoring recommenced in 2004. 2004 - In September, 7 borings (EB1, EB2 and EB4 through EB8) were advanced to 25 ft bgs onsite. In October, 1 boring (EB3) and 1 well (STMW5 later known as MW5) were advanced offsite. 49 soil samples were collected and reported to contain maximum concentrations of 15 ppm TPHg, 15 ppm MtBE and 0.63 ppm TBA. The maximum TPHg and MtBE were reported in the soil sample collected at 20 ft bgs in boring EB2 located near the southwestern corner of the UST excavation. Groundwater was encountered in borings around 20 ft bgs. EB3 was advanced to 45 ft bgs near the southwestern corner of the UST excavation for the collection of a deeper groundwater sample; which was not reported to have concentrations of the COCs present above the laboratory reporting limits. 2006 - In May, containment beneath 4 dispensers and piping were replaced at the site. 8 soil samples were collected and reported to contain maximum concentrations of 230 ppm TPHd and 17 ppm Lead. Between 2006 and 2008 the only ongoing activity was groundwater monitoring. 2008 - In February, the wells were inspected using downhole submersible cameras. Based on the inspection, it was concluded that wells MW1 and MW2 are screened in the shallow portion of the water-bearing zone, wells MW4 and MW5 are screened in the middle portion of the water bearing zone and well MW3 is screened in the deeper portion of the water bearing zone. 2010 - In March, 4 soil borings (SB1, SB3 and SB4) were advanced onsite. Boring SB2 was not advanced due to previous sampling in close proximity. 3 soil samples were collected and were not reported to have concentrations of the COCs present above the laboratory reporting limits. 4 grab groundwater samples were collected and reported to have maximum concentrations of 1,900 ppb TBA; all other constituents were not reported to be present above the laboratory reporting limits. The maximum TBA concentration was reported in the sample collected from SB4 advanced between MW2 and MW4. It was later reported that during the March investigation, groundwater was encountered around 40 ft bgs and quickly rose to 20 ft bgs, indicating confined groundwater conditions. 2012 - In March, 6 soil borings (B1, B2, B4 through B6 and B8) were advanced to 44.5 ft bgs. 2 other planned borings were not advanced due to utilities. 19 soil samples were collected and were only reported to have 3 detections of TBA (maximum concentration of 0.099 ppm at 25 ft bgs in B1); all other COCs were not reported to be present above the laboratory reporting limits. TBA was detected in samples collected in borings B1 and B8. Boring B1 was advanced near the UST excavation and boring B8 was advanced downgradient of the pump islands. 3 deeper monitoring wells (MW6 through MW8) were installed to depths of 46 and 50 ft bgs. The final depth of the wells was based on drill rig refusal. 3 soil samples were collected from the soil-groundwater interface and were not reported to have concentrations of the COCs present above the laboratory reporting limits. Following installation, the wells and all site wells were re-surveyed and the new wells were added to the groundwater monitoring program. An attempt was made to collect depth discrete samples from the site wells using a Solinst Discrete Interval Sampler. 2 samples were collected from wells MW1 through MW5 and 3 samples were collected from wells MW6 through MW8 for a total of 19 grab groundwater samples. MtBE concentrations ranged from non-detect to 1.7 ppb and TBA concentrations ranged from non-detect to 1,800 ppb. MtBE was only reported for samples collected from the shallower wells (MW1 through MW6). During drilling, a shallow perched groundwater zone was observed at 13 ft bgs in a clayey sand lense above an underlying clay layer. An attempt was made to collect grab groundwater samples in the borings of this shallow groundwater, but insufficient groundwater entered the boreholes. An underlying groundwater zone (Zone A) extends from about 15 to 44 ft bgs and appears to be semi-confined. The underlying Zone B (clayey gravely well-graded sand layer from 49-50 ft bgs) is confined and is the most permeable zone observed beneath the site. 2013 - In January, 2 well pairs (MW9 A/B and MW10 A/B) were installed to 35 and 55 ft bgs. The new wells were added to the groundwater monitoring program. 2014 - In November, 2 soil boring pairs (SB1 A/B and SB2 A/B) were advanced across the street in a parking lot to depths of 48 and 60 ft bgs for the collection of grab groundwater samples. 4 grab groundwater samples were collected and only the sample SB1B (48 ft bgs) was reported to contain 0.7 ppb MtBE; the other samples did not have detections of MtBE or TBA. 2015 - In March, the final groundwater monitoring event was conducted and reported maximum concentrations of 1.6 ppb MtBE and 520 ppb TBA in wells MW3 and MW5, respectively.

Cleanup Status: CERTIFIED O&M - LAND USE RESTRICTIONS ONLY AS OF 5/20/2016
Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
Site Type: TIERED PERMIT
Office: CLEANUP BERKELEY
Past Use that Caused Contam: METAL PLATING - OTHER
Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL
Potential Contaminant of Concern:

BENZO[A]PYRENE, METALS, TRICHLOROETHYLENE (TCE)

Site History:

Site History: The facility is located at 1009 Timothy Drive, in the City of San Jose, Santa Clara County. Surrounding properties consist of commercial and industrial developments. Prime Plating is comprised of a single building structure of approximately 33,000 square feet. The building is further subdivided into different rooms for different operations. The entire property is 90,000 square feet. The facility has been operating in its current location for the past 38 years, prior to that the land was undeveloped. The Facility contact person is Mr. Edward Pease, the Chemical Engineer who has been with the Facility for the past 6 years. The President of the facility is Mr. Barraco.

The operations at the Facility include metal plating and finishing, metal forming, precision machining, photochemical machining, metal etching, metal to ceramic brazing, lamination and assembly, sintering and heat treatment. Elcon specialized in base materials such as nickel, gold, kovar, molybdenum, tungsten, silver, stainless steel, beryllium copper, tungsten copper, copper, and brass. Metal etching and plating tend to be on a small scale for biomedical, aerospace and electronic processes.

Status: CERTIFIED O&M - LAND USE RESTRICTIONS ONLY - LAND USE RESTRICTIONS

Site History:

Site History: The facility is located at 1009 Timothy Drive, in the City of San Jose, Santa Clara County. Surrounding properties consist of commercial and industrial developments. Prime Plating is comprised of a single building structure of approximately 33,000 square feet. The building is further subdivided into different rooms for different operations. The entire property is 90,000 square feet. The facility has been operating in its current location for the past 38 years, prior to that the land was undeveloped. The Facility contact person is Mr. Edward Pease, the Chemical Engineer who has been with the Facility for the past 6 years. The President of the facility is Mr. Barraco.

The operations at the Facility include metal plating and finishing, metal forming, precision machining, photochemical machining, metal etching, metal to ceramic brazing, lamination and assembly, sintering and heat treatment. Elcon specialized in base materials such as nickel, gold, kovar, molybdenum, tungsten, silver, stainless steel, beryllium copper, tungsten copper, copper, and brass. Metal etching and plating tend to be on a small scale for biomedical, aerospace and electronic processes.

Date Recorded: 10/27/2005
Site History:

Volatile organic compounds (VOCs) released at the Gorilla Circuits site have polluted soil and groundwater, with groundwater pollution extending offsite. Maps of the groundwater pollutant plume produced for the Gorilla Circuits site indicate that the groundwater pollutant plume impacts the southern portion of the adjacent property (Aqua Science, Inc., December 26, 2007, Groundwater Monitoring Report). Additional groundwater remedial actions are to take place at and near the Site in 2018.

Stop Description: LEAKING UST
Cal Water Watershed Name: Santa Clara - Coyote Creek (205.30)
DWR Groundwater Subbasin: Santa Clara Valley - Santa Clara (2-009.02)
Site History:

Volatile organic compounds (VOCs) released at the Gorilla Circuits site have polluted soil and groundwater, with groundwater pollution extending offsite. Maps of the groundwater pollutant plume produced for the Gorilla Circuits site indicate that the groundwater pollutant plume impacts the southern portion of the adjacent property (Aqua Science, Inc., December 26, 2007, Groundwater Monitoring Report). Additional groundwater remedial actions are to take place at and near the Site in 2018.

Potential Contamin of Concern:			

CHLORDANE, DDD, DDE, DDT

Site History:

Garden Valley Fertilizer Co. manufactured and distributed liquid fertilizer products for approximately 40 years at this Site. Chlordane and cadmium were detected in soil above U.S. EPA Region IX Preliminary Remediation Goals (PRG) for residential land use. However, neither chemical was detected above the PRG for commercial land use. Chlordane was detected in groundwater above its drinking water standard. Site data indicates that there may be a potential upgradient source for some of the chlordane detected. An environmental restriction has been recorded prohibiting the use of the site for sensitive land uses such as for residences, schools, day care facilities and hospitals and also prohibiting the use of shallow groundwater underlying the Site. Therefore, with the exception of compliance with the environmental restriction requirements, DTSC has determined that no further action is required.

Site History:

From 1964 to 1983, Moyer Chemical Company produced pesticides, fungicides, insecticides, and weed killers. From 1983 to 1986, Ultra-Chem operated as a hazardous waste treatment facility, a lacquer thinner reclamation facility, and distributed proprietary commercial and industrial chemicals. In 1986 Ultrachem declared bankruptcy and left the site without completing closure. From 1987 until 1993, National Auto Recovery Bureau occupied the site. Since 1993 the site has been the location of auto wrecking operations.

All future work is addressed under ULTRA-CHEM/ALL-CHEM/SCOTT ENTERPRISES (80001847) DTSC will be proceeding with an Corrective Action Consent Order to cleanup the site. Please use the Ultra-Chem facility link.

STATUS:

The Department of Toxic Substances Control (DTSC) will meet with the Responsible Parties (RPs) in early 2008, to discuss implementation of a Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI). The RFI will be conducted to determine the extent of contamination at the site. A draft corrective action consent agreement (CACA) has recently been provided to the RPs for review. The CACA is signed by both the RPs and DTSC and describes what the investigation should entail and the associated costs involved in the State over-seeing investigation of the site.

SITE HISTORY:

The DTSC conducted a RCRA Facility Assessment (RFA) pursuant to the RCRA Corrective Action process. The purpose of the RFA is to identify Solid Waste Management Units (SWMUs) and Areas of Concern (AOCs), collect existing information on contaminant releases, and evaluate site information to determine if further investigation is necessary. The report presents the results of the RFA, documents the process leading to its conclusions and recommendations, and consolidates pertinent information on the facility and its SWMUs and AOCs.

The subject property, located at 1300-1310 Old Bayshore Highway, has a history of commercial and industrial operations. Current operations demonstrate no evidence of release of hazardous materials to the environment. The thick concrete and asphalt cap currently in place prevents contaminant migration. Presently contamination is documented to be limited to near surface the soil; groundwater has reportedly not been impacted. The mobility of existing contamination is thought to be minimal because of the presence of the cap, and the presumed low solubility of suspected contaminants.

4/11/2018- Facility was issued a permit effective 09/30/1983 to 09/30/1988. According to CACA dated 03/27/2013, facility notified DHS that it was closing operations on February 1986. A letter dated 06/01/1988 and a memorandum of the Chronology of Events dated 07/17/1992 stated that closure was not completed and that facility will be referred to clean up. The facility is currently being handled under clean up as confirmed by Project Manager, Henry Chui.

Site History:

Ultra-Chem site (Site) was used for agricultural purposes through the late 1940s. In late 1947, the title to the Site was transferred to Moyer Chemical Company (Moyer). Moyer received raw chemicals and blended them into a variety of dry and liquid agricultural insecticides, fungicides, and weed killers for commercial distribution. According to historical documentation included in the Iris Site Conditions Report, chemicals potentially used and/or stored onsite may have included organochlorine, organophosphorus, and carbamate pesticides; petroleum hydrocarbons; solvents; metals and inorganic compounds; acids; and bases.

C. L. Scott Enterprises, Inc. doing business as Ultra-Chem and All-Chem (Ultra-Chem) reportedly leased a portion of the property in November 1982 and operated at the site from 1983 to 1986. At some point prior to Ultra-Chem beginning onsite operations, the parcel occupied by Moyer was split; Ultra-Chem and the subsequent owners occupied the southern portion of the split property. In September 1983, the Department of Health Services (DHS; now Department of Toxic Substances Control - DTSC) issued a permit to the Ultra-Chem Facility for storage of hazardous waste and treatment by distillation. Ultra-Chem operated as a transfer station collecting and storing hazardous wastes from hazardous waste generators before reportedly transferring the wastes to a disposal facility; solvents were reportedly reclaimed in an onsite distillation unit. The operations closed in February 1986 but the facility was never properly closed and never obtained a closure certification from the Department. Ultra-Chem. filed for bankruptcy in April 1986. Beginning in 1985, during Ultra-Chem's tenure at the site, Fitzpatrick Barricade and Safety Supply (Fitzpatrick) became a tenant. Fitzpatrick was reportedly a small-quantity generator of hazardous waste. Documentation regarding the specific wastes generated by Fitzpatrick is unavailable. Fitzpatrick remained a tenant at the site through at least 1989.

From 1986 to 2003, the property ownership title has changed several times. Most of the business that operated at the Site since 1986 are auto body shops. In 2003, Maxim I Properties (Maxim) acquired title to the Site from Enviro-Tech Business & Development, Inc. and Kamal S. Farshi. In 2012 the

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

Santa Clara Superior Court entered a judgment of rescission in favor of Maxim, declaring the 2003 sale of the Site void from the date of the transaction. American Drilling Company (American Drilling) leased the northern portion of the Site from Maxim and began onsite operations in 2003 as a construction drilling contractor and is currently operating the Site. The southern portion of the Site is currently being leased by Santa Clara Dairy, and has been since 2005.

Review of historic documents show the area surrounding the Site as industrial since at least 1899, the oldest historical record reviewed. The current land use at the site is industrial, and the site is zoned as heavy industrial use and the immediate site vicinity is zoned as heavy industrial and light industrial use. There are four buildings onsite: three large warehouses along the eastern property line and an office building in the central-western portion of the site. The office building is the only building with daily occupants. The entire Site is capped with concrete. Previous investigations at the Site include soil vapor, soil, and groundwater investigations.

The Site is located in the Santa Clara Valley, which is characterized by alluvial deposits. The geologic units are relatively flat within the area of investigation, and appears laterally continuous to at least 100 feet (ft.) below ground surface (bgs). Below the surface to approximately 21 to 24 ft bgs is a low permeability fine grained layer consisting of silty clay or clayey silt. Beneath the low permeability fine grained layer is a 6 to 18 inches saturated zone (A-zone) consisting of a sand within a silty/clayey matrix. Immediately below the A-zone is a finer grained low permeability silty clay and clayey silt. Beneath this clay layer is a series of interbedded sand and gravel which constitute the second water bearing zone (B-zone) that begins at approximately 45 to 50 ft bgs and extends to a depth greater than 100 ft bgs, the greatest depth investigated at the site. The A-zone at the Site appears to be semi-confined and occurs consistently across the Site with a hydraulic gradient to the west southwest. The B-zone appears to be confined from observations in B-zone wells with a relatively flat gradient to the west southwest.

Soil vapor samples collected at the Site during previous site investigations indicated presence of chlorinated volatile organic compounds (VOCs) and petroleum-related VOCs in soil vapor at concentrations exceeding their applicable regulatory screening criteria. chlorinated VOCs were detected along the western Site boundary with lower concentrations across the rest of the Site. Concentrations of chlorinated VOCs were lower in shallow 5 ft bgs samples than deep 15 ft bgs samples. In addition, petroleum-related VOCs were detected along the eastern Site boundary behind and immediately south of the three warehouse buildings at the Site. Concentrations of petroleum-related VOCs were higher and more laterally extensive in shallow 5 ft bgs samples compared to deep 15 ft bgs samples.

Soil samples collected at the Site during previous site investigations indicated presence organochlorine and organophosphorus pesticides, chlorinated and petroleum-related VOCs, petroleum hydrocarbons, and metals (arsenic and cobalt) exceeding their applicable regulatory screening criteria. organochlorine pesticides were detected in shallow and deep soil (between 2 and 25 ft bgs) along the eastern property boundary, the southern property boundary, and the western property boundary. Organophosphorus pesticides exceeded their respective screening criteria only in shallow soil, five ft. or less, along the eastern property boundary behind the warehouses. In addition, petroleum-related VOCs were detected in shallow and deep soil along the eastern property boundary and southern property boundary. Chlorinated VOC exceedances were generally limited to shallow and deep soil in an isolated area on the western boundary of the site. Total petroleum hydrocarbons (TPHs) were generally detected in shallow and deep soil samples across the site. Metal impacts were observed in shallow soil along the eastern property boundary and in portions of the southern portion of the site.

Groundwater impacts at the site in A-zone ground water include organochlorine pesticides, chlorinated and petroleum-related VOCs, metal (antimony, arsenic, barium, beryllium, chromium, lead, mercury, and nickel if grab groundwater [high turbidity] results are considered; and only arsenic, if sole groundwater monitoring well sampling results are considered), and petroleum hydrocarbons at concentrations exceeding their applicable screening criteria. Groundwater exceedances in the B-zone include organochlorine pesticides, metals and TPHs and are generally limited to grab groundwater samples (high turbidity). All analytical groups including organochlorine pesticides, petroleum-related VOCs, metals (grab groundwater samples - high turbidity), and TPHs were detected in A-zone ground water above regulatory screening criteria along the eastern limits of the Site behind the warehouses and along the Site's southern boundary. Chlorinated VOCs were observed along the Site's western boundary. TPH was detected in A-zone ground water above screening criteria across the Site as well as upgradient of the Site to the north and downgradient of the Site to the south.

According to the 14th groundwater sampling event and 5th semiannual sampling event for the Site with the current network of monitoring wells, concentrations of pesticides, VOCs, semi-volatile organic compounds, petroleum, and metals observed in ground water were consistent with concentrations observed during previous sampling events, except where noted in the respective groundwater monitoring reports.

DTSC is currently reviewing the Draft Corrective Measures Study for the Site.

STATUS:

The Department of Toxic Substances Control (DTSC) will meet with the Responsible Parties (RPs) in early 2008, to discuss implementation of a Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI). The RFI will be conducted to determine the extent of contamination at the site. A draft corrective action consent agreement (CACA) has recently been provided to the RPs for review. The CACA is signed by both the RPs and DTSC and describes what the investigation should entail and the associated costs involved in the State over-seeing investigation of the site.

SITE HISTORY:

The DTSC conducted a RCRA Facility Assessment (RFA) pursuant to the RCRA Corrective Action process. The purpose of the RFA is to identify Solid Waste Management Units (SWMUs) and Areas of Concern (AOCs), collect existing information on contaminant releases, and evaluate site information to determine if further investigation is necessary. The report presents the results of the RFA, documents the process leading to its conclusions and

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

recommendations, and consolidates pertinent information on the facility and its SWMUs and AOCs.

The subject property, located at 1300-1310 Old Bayshore Highway, has a history of commercial and industrial operations. Current operations demonstrate no evidence of release of hazardous materials to the environment. The thick concrete and asphalt cap currently in place prevents contaminant migration. Presently contamination is documented to be limited to near surface soil; groundwater has reportedly not been impacted. The mobility of existing contamination is thought to be minimal because of the presence of the cap, and the presumed low solubility of suspected contaminants.

4/11/2018- Facility was issued a permit effective 09/30/1983 to 09/30/1988. According to CACA dated 03/27/2013, facility notified DHS that it was closing operations on February 1986. A letter dated 06/01/1988 and a memorandum of the Chronology of Events dated 07/17/1992 stated that closure was not completed and that facility will be referred to clean up. The facility is currently being handled under clean up as confirmed by Project Manager, Henry Chui.

Site History:

Moyer Chemical site (Site) was used for agricultural purposes through the late 1940s. In late 1947, the title to the Site was transferred to Moyer Chemical Company. Moyer received raw chemicals and blended them into a variety of dry and liquid agricultural insecticides, fungicides, and weed killers for commercial distribution. Diamond Alkali Chemical Manufacturing (DACM) occupied the Site from 1959 to 1965. Activities conducted by DACM are not known. After 1965, the Site was occupied by Howard Electric until 1981. In 1981, the current owner, San Jose Concrete Transfer Company, occupied the Site.

Review of historic documents show the area surrounding the Site as industrial since at least 1899, the oldest historical record reviewed. Previous investigations at the Site include soil vapor, soil, and groundwater investigations.

The Site is currently used for storage by the owner, San Jose Concrete Transfer Company. The Site contains warehouse buildings and open yard space for the storage of concrete pipes and equipment. The northern corner is paved with concrete and most of the southwestern portion of the Site is paved with asphalt. The southeast portion is also being used as storage for the neighboring tenant, American Drilling at 1300-1310 Old Bayshore Highway, which is accessed through an opening in the fence between the two sites. The southern portion of the Site where an office building is located is occupied by Romero Construction. All other structures at the Site are used for storage and are not enclosed structures.

The Site is located in the Santa Clara Valley, which is characterized by alluvial deposits. The geologic units are relatively flat within the area of investigation, and appears laterally continuous to at least 100 feet (ft.) below ground surface (bgs). Below the surface to approximately 21 to 24 ft bgs is a low permeability fine grained layer consisting of silty clay or clayey silt. Beneath the low permeability fine grained layer is a 6 to 12 inches saturated zone (A-zone) consisting of a sand within a silty/clayey matrix. Immediately below the A-zone is a finer grained low permeability silty clay and clayey silt that extends to the top of the B-zone (a gravely sand unit) at approximately 40 to 55 ft bgs. The A-zone at the Site appears to be semi-confined and occurs consistently across the Site with a hydraulic gradient to the west southwest with an average magnitude of 0.005. The B-zone appears to be confined from observations in B-zone wells at the neighboring Ultra-Chem facility with a relatively flat gradient to the west southwest with a magnitude of 0.001. Vertical hydraulic gradients between the A-zone and B-zone are characterized by the potential for downward flow from the A-zone to the B-zone.

Investigation activities conducted at the Site reported organochlorine pesticides (OCPs), petroleum volatile organic compounds (VOCs), total petroleum hydrocarbons (TPH), and metal (cobalt) in soil at concentrations exceeding their applicable regulatory screening criteria.

OCPs were detected in shallow and deep soil (2-25 ft bgs) along the eastern and northern property boundaries with lower concentrations across the rest of the Site. OCP exceedances appear to align with areas designated as areas of concern during Moyer Chemical's operations. Petroleum VOCs, metals and TPH impacts were detected in deep soil (20-25 ft bgs) coinciding with the A-zone along the eastern property boundary bordering the railroad track. Limited exceedances of TPH were also found in shallow soil (2-10 ft bgs) along the eastern property boundary. Cobalt impacts were observed in shallow soil along the northern property boundary.

Groundwater impacts at the Site include petroleum VOCs, OCPs, metal (arsenic) and TPH at concentrations exceeding their applicable regulatory screening criteria in A-zone groundwater. All analytical groups including VOCs, TPH, metals, and OCPs were detected in A-zone groundwater above regulatory screening criteria along the eastern property limits bordering the railroad track.

OCPs impacts were observed both along the eastern property boundary and in the western corner of the Site. Exceedances of metals in A-zone groundwater were found the western and eastern corners of the Site. TPH was detected in A-zone groundwater above screening criteria across the Site. In addition, TPH impacts in A-zone ground water were observed in offsite samples to the north of the property and to the south of the property at 1300-1310 Old Bayshore Highway. There are no exceedances of any contaminants in B-zone groundwater samples.

2016 Removal Action Plan recommended as a remedy alternative the implementation of institutional control, engineering control, light non-aqueous phase liquid (LNAPL) removal and groundwater monitoring to protect human health and the environment and comply with the applicable or relevant and appropriate requirements.

Institutional control would include restrictions on land use and activities at the Site, property zoning restrictions, groundwater usage regulations and a site-specific Soil Management Plan. Engineering control will consist of the existing concrete and asphalt cap and new concrete cover above uncovered areas to minimize worker exposure to chemical of concerns (COCs) impacts in shallow soil and storm water infiltration through impacted soil to ground water. LNAPL, present in SJMW-4, will be removed using absorbent socks. In addition, groundwater monitoring will be performed within the A- and B-zones to assess the stability of the existing groundwater plume and monitor potential horizontal and downward vertical migration of COCs present in A-zone ground water.

Following the implementation of the 2016 RAW recommended remedy alternative, a Removal Action Implementation Report will be prepared to document the work activities conducted as part of recommended remedy alternative. In addition, a subsequent Operation and Maintenance (O&M) Plan will be prepared to provide long-term protection of human health and the environment. O&M activities will include long-term groundwater monitoring of the existing well network and the proposed sentinel well network, an evaluation of sentinel well analytical data, groundwater monitoring well maintenance activities, annual inspections and maintenance of the concrete and asphalt cover at the Site, and the preparation of five-year review reports.

Site History:

Moyer Chemical site (Site) was used for agricultural purposes through the late 1940s. In late 1947, the title to the Site was transferred to Moyer Chemical Company. Moyer received raw chemicals and blended them into a variety of dry and liquid agricultural insecticides, fungicides, and weed killers for commercial distribution. Diamond Alkali Chemical Manufacturing (DACM) occupied the Site from 1959 to 1965. Activities conducted by DACM are not known. After 1965, the Site was occupied by Howard Electric until 1981. In 1981, the current owner, San Jose Concrete Transfer Company, occupied the Site.

Review of historic documents show the area surrounding the Site as industrial since at least 1899, the oldest historical record reviewed. Previous investigations at the Site include soil vapor, soil, and groundwater investigations.

The Site is currently used for storage by the owner, San Jose Concrete Transfer Company. The Site contains warehouse buildings and open yard space for the storage of concrete pipes and equipment. The northern corner is paved with concrete and most of the southwestern portion of the Site is paved with asphalt. The southeast portion is also being used as storage for the neighboring tenant, American Drilling at 1300-1310 Old Bayshore Highway, which is accessed through an opening in the fence between the two sites. The southern portion of the Site where an office building is located is occupied by Romero Construction. All other structures at the Site are used for storage and are not enclosed structures.

The Site is located in the Santa Clara Valley, which is characterized by alluvial deposits. The geologic units are relatively flat within the area of investigation, and appears laterally continuous to at least 100 feet (ft.) below ground surface (bgs). Below the surface to approximately 21 to 24 ft bgs is a low permeability fine grained layer consisting of silty clay or clayey silt. Beneath the low permeability fine grained layer is a 6 to 12 inches saturated zone (A-zone) consisting of a sand within a silty/clayey matrix. Immediately below the A-zone is a finer grained low permeability silty clay and clayey silt that extends to the top of the B-zone (a gravely sand unit) at approximately 40 to 55 ft bgs. The A-zone at the Site appears to be semi-confined and occurs consistently across the Site with a hydraulic gradient to the west southwest with an average magnitude of 0.005. The B-zone appears to be confined from observations in B-zone wells at the neighboring Ultra-Chem facility with a relatively flat gradient to the west southwest with a magnitude of 0.001. Vertical hydraulic gradients between the A-zone and B-zone are characterized by the potential for downward flow from the A-zone to the B-zone.

Investigation activities conducted at the Site reported organochlorine pesticides (OCPs), petroleum volatile organic compounds (VOCs), total petroleum hydrocarbons (TPH), and metal (cobalt) in soil at concentrations exceeding their applicable regulatory screening criteria.

OCPs were detected in shallow and deep soil (2-25 ft bgs) along the eastern and northern property boundaries with lower concentrations across the rest of the Site. OCP exceedances appear to align with areas designated as areas of concern during Moyer Chemical's operations. Petroleum VOCs, metals and TPH impacts were detected in deep soil (20-25 ft bgs) coinciding with the A-zone along the eastern property boundary bordering the railroad track. Limited exceedances of TPH were also found in shallow soil (2-10 ft bgs) along the eastern property boundary. Cobalt impacts were observed in shallow soil along the northern property boundary.

Groundwater impacts at the Site include petroleum VOCs, OCPs, metal (arsenic) and TPH at concentrations exceeding their applicable regulatory screening criteria in A-zone groundwater. All analytical groups including VOCs, TPH, metals, and OCPs were detected in A-zone groundwater above regulatory screening criteria along the eastern property limits bordering the railroad track.

OCPs impacts were observed both along the eastern property boundary and in the western corner of the Site. Exceedances of metals in A-zone groundwater were found the western and eastern corners of the Site. TPH was detected in A-zone groundwater above screening criteria across the Site. In addition, TPH impacts in A-zone ground water were observed in offsite samples to the north of the property and to the south of the property at 1300-1310 Old Bayshore Highway. There are no exceedances of any contaminants in B-zone groundwater samples.

2016 Removal Action Plan recommended as a remedy alternative the implementation of institutional control, engineering control, light non-aqueous

phase liquid (LNAPL) removal and groundwater monitoring to protect human health and the environment and comply with the applicable or relevant and appropriate requirements.

Institutional control would include restrictions on land use and activities at the Site, property zoning restrictions, groundwater usage regulations and a site-Specific Soil Management Plan. Engineering control will consist of the existing concrete and asphalt cap and new concrete cover above uncovered areas to minimize worker exposure to chemical of concerns (COCs) impacts in shallow soil and storm water infiltration through impacted soil to ground water. LNAPL, present in SJMW-4, will be removed using absorbent socks. In addition, groundwater monitoring will be performed within the A- and B-zones to assess the stability of the existing groundwater plume and monitor potential horizontal and downward vertical migration of COCs present in A-zone ground water.

Following the implementation of the 2016 RAW recommended remedy alternative, a Removal Action Implementation Report will be prepared to document the work activities conducted as part of recommended remedy alternative. In addition, a subsequent Operation and Maintenance (O&M) Plan will be prepared to provide long-term protection of human health and the environment. O&M activities will include long-term groundwater monitoring of the existing well network and the proposed sentinel well network, an evaluation of sentinel well analytical data, groundwater monitoring well maintenance activities, annual inspections and maintenance of the concrete and asphalt cover at the Site, and the preparation of five-year review reports.

The RI field activities were conducted between April 2014 and March 2015 which included soil, soil gas, and groundwater sampling. No volatile organic compounds (VOCs) were detected in soil vapor above any regulatory screening levels. In soil, petroleum, pesticides, and metals were found across the site. In groundwater, petroleum, arsenic and pesticides were detected primarily along the eastern property boundary with some exceedances along the western property boundary and northern central portion of the site. A Removal Action Workplan will be prepared to address the contamination at the site.

Site History:

Safety-Kleen occupies a site on North Tenth Street bounded by Highway 101 on the north and a lumber company, Soares & Son, to the south. There is a bridge on Tenth Street, which crosses over the Highway 101. This site has a small parking lot with restricted access to the back area with a gate and fence. Previous names for Safety-Kleen have been Solvent Services 1973-1990, USPCI, a subsidiary of Union Pacific Corporation acquired Solvent Services in 1990. Union Pacific sold the operation of USPCI to Laidlaw Environmental Services (also known briefly as Laidlaw-USPCI during the transition) in 1994. In 1998 Laidlaw Environmental Services acquired Safety-Kleen Corporation and assumed the name Safety-Kleen Corporation. While the permit application for this address was being processed, Safety-Kleen operated this site as a transfer station with a maximum 10 days on site for the spent solvents. Safety-Kleen transported spent solvents (perchloroethylene (PCE), paints, inks, lacquer thinners, ethylene glycols, spent photochemicals and waste oils) it picked up from customers for recycling. Safety-Kleen is a permitted Hazardous Waste Facility, by Department of Toxic Substances Control (DTSC). The permit licenses the facility from October 1996 to October 2006. DTSC Staff inspected the site in 1997 and found no violations. In 1998 Safety-Kleen requested that designation of overseeing agency be changed to Regional Water Quality Control Board (RWQCB). Groundwater monitoring is ongoing for volatile organic compounds (VOCs).

Site History:

Safety Kleen distributes "new" solvents and collects used solvents from various businesses. Used solvents are collected from the generators, temporary store on-site, before transferring to a permitted treatment facility for recycling. Safety Kleen has been operating at this Site since 1984. Investigations were conducted and found elevated concentrations of volatile organic compounds in soil, soil gas, and groundwater.

Comments:					The 2014 4th Quarter Progress Report describes the activities that were performed during the quarter and presents the next quarter activities. During the 4th quarter, Safety-Kleen collected groundwater samples from all nine monitoring wells and presented the results as part of the semiannual monitoring program for the site. Several volatile organic compounds (PCE, TCE, and CFC) were detected that have not been detected in groundwater since 2001 to 2002. The monitoring wells were resampled and the results were consistent with the historical detections. It was determined that residual equipment contamination resulted in a false positive detections and the Standard Operating Procedures for decontaminating equipment were updated to prevent this from reoccurring. For the next quarter (1st Quarter 2015), Safety-Kleen will conduct soil vapor/indoor air sampling. No groundwater monitoring activities are planned for the next quarter.

Site History:

Update 6/29/07 - DTSC staff met with Brian Culnan of SK on 6/5/07 at the DTSC Sacramento Regional Office to discuss corrective action and AB1651 at SK San Jose. Based on the 6/5/07 meeting, the following is the history of the site: This was converted to a transfer facility years ago. Tanks were removed as part of past closure; closure certification was not completed because of extensive contamination to soil and groundwater. The site work was further complicated by corrective action work performed on the groundwater at an adjacent site. There is a CACA in place (2003). An earlier RFI Work Plan was submitted to DTSC regarding soil borings only because at the time, DTSC was the lead on soil and the RWQCB was the lead for groundwater. Later, in September 2003, when DTSC took jurisdiction over groundwater, a subsequent RFI Work Plan was submitted to DTSC for groundwater issues. SK has been monitoring the groundwater (semiannually) near the dewatering tanks which show high contamination but a decreasing trend. MTBE is found upgradient, but not related to SK operations.

Facility History:

Update 6/29/07 - DTSC staff met with Brian Culnan of SK on 6/5/07 at the DTSC Sacramento Regional Office to discuss corrective action and AB1651 at SK San Jose. Based on the 6/5/07 meeting, the following is the history of the site: This was converted to a transfer facility years ago. Tanks were removed as part of past closure; closure certification was not completed because of extensive contamination to soil and groundwater. The site work was further complicated by corrective action work performed on the groundwater at an adjacent site. There is a CACA in place (2003). An earlier RFI Work Plan was submitted to DTSC regarding soil borings only because at the time, DTSC was the lead on soil and the RWQCB was the lead for groundwater. Later, in September 2003, when DTSC took jurisdiction over groundwater, a subsequent RFI Work Plan was submitted to DTSC for groundwater issues. SK has been monitoring the groundwater (semiannually) near the dewatering tanks which show high contamination but a decreasing trend. MTBE is found upgradient, but not related to SK operations.

CADMIUM AND COMPOUNDS, CYANIDE (FREE), CYANIDE (HYDROGEN), NICKEL

Site History:

DTSC entered into a Voluntary Cleanup Agreement with the Villalba Family Trust in June 2012 to oversee a Preliminary Endangerment Assessment and reviewed and approved a workplan and report for a subsurface investigation. Cadmium was detected in shallow soil at a maximum concentrations of 1,390 mg/kg. The elevated cadmium concentrations in soil are localized and mostly beneath the slab of the building on the Site. The subsurface investigation report recommended either capping with a land use covenant or excavation of the cadmium-impacted soil. The project proponent did not conduct further work with DTSC oversight and reportedly performed soil excavation inside the building to remove impacted soil. The Site is currently where San Jose Metals, a recycling center is operating and the Site is covered by the building and pavement.

Site History:

Site History: The site is a news paper printing and hazardous waste facility. The facility also maintained a fleet of trucks and automobiles for deliveries and service. The property included the main press building, an automobile maintenance garage, a car wash, and a pumping station formerly supplied by eight underground storage tanks. The known release of fuel led to several soil and groundwater investigation at the site. In 1991, under the direction of the Santa Clara Valley Water District (SCVWD) all USTs were removed. Based on the results of the ongoing investigations and risk assessment, in January 1996, the Regional Water Quality Control Board (RWQCB) requested the facility to determine the plume stability followed by source removal and the evidence of passive remediation (natural attenuation) occurring in groundwater.

On July 22, 1993, San Jose Mercury News was authorized to manage hazardous waste under Permit by Rule. On December 16, 1996, facility submitted the Phase I Environmental Assessment identifying six areas of concern to be further investigated. On December 8, 1997, DTSC conducted a site inspection and concluded that further investigation is needed. A Corrective Action Consent Agreement was signed with the facility on May 26, 2000 to reimburse the oversight costs for the investigation. The facility investigated five of the six areas of concern and postponed one area of concern pending building renovation.

Site History:

Prior to use by Markovitz and Fox as a metal recycling operation, the site was a pear orchard. Markovitz and Fox purchased the site in 1957 and began operations in 1964. The facility ceased operations in March 2000. The on-site metal recycling operations included sorting, shredding, and compressing of ferrous and non-ferrous metals. In 1963, an area approximately 250 by 100 feet was excavated approximately 15 feet deep for a refuse pit in the northwest section of the site. The excavated area was backfilled with solid wastes, until approximately 1970. The landfill area is now currently paved over. Prior to the early 1980s, an incinerator was present in the northern portion of the site and west of the warehouse. The incinerator was used to burn wire insulation and recover the copper wire and melted lead. Markovitz and Fox recycled transformer casings and coils under contract with Pacific Gas and Electric. The transformers still contained some residual transformer fluid. Vehicle batteries were also recycled and stored on site. Battery recycling involved the removal of lead cores from the vehicle batteries. Three underground fuel storage tanks were previously located near the truck scale and another in the northwestern corner of the site. All four tanks were removed under the oversight of the San Jose Fire Department. In November 2001, all buildings and structures on the Site were demolished. The metal recycling operation has been discontinued and the site closed.

To accommodate the requirement of the new consolidation cell on the Brokaw Road Site, the property owners requested a lot line adjustment from the City of San Jose. The lot line adjustment was approved in December 2010. The reconfigured 1633 Oakland Road parcel now consists of approximately 16 acres from the previous approximately 18 acres parcel size.

Comments:	A former waste oil underground storage tank (UST) was encountered during grading activities that occurred on the site subsequent to DTSC's certification. Polychlorinated biphenyls were discovered in a sediment/sludge sample that was collected from the UST and analyzed. Because of the discovery of the PCBs, DTSC contacted US EPA, and the site was determined to be subject to regulation under the federal Toxic Substances Control Act. The Report was requested by US EPA to summarize the sampling and mitigation activities related to PCBs. Sampling

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
					showed that the residual PCB concentrations were below the 1.0 milligram per kilogram (mg/kg) cleanup objective established by DTSC for the Site, with the exception of one sample beneath the future street section, where PCBs were detected at 1.8 mg/kg. The 95 percent upper confidence limit of the arithmetic mean PCB concentrations was calculated to be 0.15 mg/kg; therefore, it was concluded the on sample exceeding the 1.0 mg/kg PCB cleanup objective would not be an environmental concern.

Comments:					Groundwater monitoring down-gradient of the former debris consolidation cell was conducted for four consecutive quarters. Concentrations of COCs (TPH and VOCs) were detected below the cleanup levels at all the groundwater monitoring wells except FCC-MW-3. The elevated concentrations detected at FCC-MW-3 are being contributed to residual groundwater contamination from other historical site operations and continued to be investigated as part of the long-term groundwater monitoring program.

Comments: DTSC approves the proposed soil pile inspection schedule, reducing the soil pile inspections to a weekly event, rather than a daily event as outlined in the RAW and the storage extension request for the soil pile. Preparation of the new consolidation cell is expected to be in the Spring of 2007.

Due to the uncertain status of the 1040-1080 Brokaw Road Site, it is premature to amend the Removal Action Workplan, at this time.

In January 1988, EPA informed DHS about its decision to delist the Cristina Warehouse based on the fact that Part A application was returned and that DHS verified that Cristina Warehouse no longer operates as a hazardous waste storage facility. In August 1988, DHS notified Cristina Warehouse that its operation is not regulated as a treatment, storage or disposal facility under State law and regulations as authorized by the EPA according to the provisions of the Resources Conservation and Recovery Act and its interim status document was rescinded.

Comments: Originally, Cristina Warehouse operated as a storage facility for hazardous materials. In 1980, Cristina Warehouse submitted a Part A hazardous waste storage permit application to the U.S. Environmental Protection Agency (EPA). Due to economic reasons, Cristina Warehouse withdrew the Part A application and discontinued storing hazardous materials/wastes. In August 1987, the Department of Health Services, Toxic Substances Control Division notified Cristina Warehouse that its operation was no longer regulated as a treatment, storage or disposal facility under State law and regulations as authorized by EPA according to the provisions of the Resources Conservation and Recovery Act and its interim status document was rescinded. Two underground storage tanks, a 550-gallon gasoline tank and a 5,000 gallon diesel tank, were removed from the Site in 1988. On February 23, 1999, Santa Clara Valley Water District issued a Fuel Leak Site Case Closure letter. Based on the documentation found and reviewed during this site screening, DTSC has determined that no further action is needed for the Site.

The Site contains a multi tenant single story building, divided into 7 separate tenant areas with each area having both office and warehouse space. There is an asphalt parking lot and landscaping surrounding the building.

Prior to 1986 the area was occupied by orchards, farm land, vacant property, and industry. From approximately 1986 to 1998, spaces 1677 and 1679 were occupied by one company, Exion Technology Inc./Pico Media, Inc., performing manufacturing processes for the semiconductor industry. One aspect of their processing included nickel plating operations.

Site History:

Prior to the purchase of the property by Markovits and Fox in 1957, the property consisted of a large pear orchard, extending from the Coyote Creek, north to present day Brokaw Road and bounded on the east and west by Oakland Road and the Union Pacific Railroad Right-of-Way, respectively.

In 1964, Markovits and Fox began the metal recycling operation, initially on the southern portion of the old pear orchard, near the creek and expanding north to present day Brokaw Road. Only the western most third of the site, near the railroad tracks, was included in the metal recycling operation. The eastern portion remained undeveloped and subleased out for agricultural production, mainly grass type crops such as grain and hay.

In the early 1980s, after the construction of Brokaw Road, the western portion of the property being used as part of the metal recycling operation was divided, with the northern portion being redeveloped into an office building (1040 Brokaw Road, parcel number 237-03-061) and the southern portion near the railroad spur remaining as part of the recycling operation. At this time the entire property (less the portion remaining as part the recycling operation) was graded for the potential for further commercial redevelopment of the property. The eastern portion of the property ceased to be used for grass production, but remained undeveloped.

In the late 1990s, the rest of the property was redeveloped into two more office buildings (1060 and 1080 Brokaw Road, parcel number 237-03-069). The portion of the site being used by the metal recycling operation was used for additional parking for the new buildings.

Comments:					The Report summarizes groundwater monitoring data collected during the fourth quarter 2013 and first quarter 2014 sampling events. Groundwater sampling results indicate concentrations of several contaminants of concern continue to be detected above the Site cleanup goals. Section 4.3 of the Report includes a monitoring schedule for the remainder of 2014. The monitoring wells will be sampled quarterly; however, analysis for some analytes will only occur annually. Reporting will continue to be performed on a semi-annual basis.

Date Completed:					3/5/2014	
Comments:					The report summarizes groundwater monitoring data collected during the second and third quarter 2013 sampling events. Additionally, the report documents the destruction of monitoring wells MW-3-CC, MW-4-CC, MW-5-CC, and MW-6-CC and the installation of replacement monitoring well MW-5-CCR. An addendum was submitted to provide additional information about the surveyed elevations of existing monitoring wells and the replacement well and to provide a revised groundwater elevation data table and revised groundwater elevation contour maps.

Comments:					The Revised O&M Plan provides guidance for performing work that breaches the low permeability cap on Consolidation Cell B, presents the procedures for the long-term monitoring and maintenance of Consolidation Cell B, and provides guidance for performing work that disturbs the areas outside of Consolidation Cell B where contaminants of concern have been detected in soil above the Site residential cleanup goals. The Revised O&M Plan was prepared to update the Operation and Maintenance Plan approved for the Site by DTSC on November 17, 2011.

Comments:					An annual site visit was conducted on January 27, 2015 to: 1) observe the condition of pavements and Site improvements over Consolidation Cell B; 2) to observe the portion of the Site outside of the area of Consolidation Cell B for activities or conditions that appear to have potential to expose impacted soil; and 3) to document that Site use activities are in compliance with the Land Use Covenant. The Report documented that the cap over Consolidation Cell B was observed to be intact, no evidence of activities that may have breached the cap was observed, and no violations of the Land Use Covenant were noted. Recommendations were included in the Report to repair a storm drain inlet adjacent to an area of ponded water and to smooth and recompact the surface of the cap with vehicle track ruts. These repairs were subsequently performed.

Comments:					The report documents the disturbance and restoration of the consolidation cell cap during the installation of 21 new light poles and their foundations for the new parking lot being constructed over the consolidation cell. The light poles were installed and their foundations completed with concrete. Since the foundations are constructed with concrete, they are more than adequate to perform as cap material over the consolidation cell where the light poles were installed.

Site History:

The facility conducted metal plating from at least 1988 to 1996. Previous uses are unknown. The facility plan shows an underground storage tank (UST), wastewater treatment area, former concrete pads, chemical storage areas, and a sludge drying area outside the building. It also shows areas inside the buildings for plating and buffing, repair and storage, and sumps. The facility was a hazardous waste generator and small quantity treatment facility. No HMBP was on file at the San Jose Fire Department for this facility and details of chemicals used at the facility are unknown. The property at 1575 Terminal Ave is currently vacant and for sale, while the property at 1585 Terminal Ave is occupied by a construction company.

Site History:

Clean Harbors San Jose, LLC operates a rail spur transfer facility at 660 Lenfest Road in San Jose for bulk liquid which includes both hazardous wastes and hazardous substances. The type of hazardous wastes allowed at the facility is Oily Water, Lean Water, Fuels, Aqueous Solution and Recyclable Liquids.

DTSC issued a Standardized Hazardous Waste Facility Permit on October 26, 2007. The Permit became effective on November 27, 2007 and expires on November 26, 2017. The maximum hazardous waste transfer and storage capacity at the Lenfest Facility at any given time is 56,500 gallons.

The Lenfest Facility only accepts bulk liquid hazardous wastes originating from Clean Harbors San Jose, LLC, located at 1021 Berryessa Road, San Jose, California (Berryessa Facility). The Berryessa Facility has a Hazardous Waste Facility Permit for treatment and storage of hazardous waste and provides the staff, supervision and management for the Lenfest Facility. The Berryessa Facility also provides Lenfest Facility with registered hazardous waste transporters or licensed third party haulers to transport hazardous wastes in closed tanker trucks or vacuum trucks from the Berryessa Facility to the Lenfest Facility. Both the Berryessa Facility and Lenfest Facility are operated by Clean Harbors San Jose LLC, located at 1021 Berryessa Road, San Jose, California. The distance between the Berryessa Facility and the Lenfest Facility is approximately one mile.

The Lenfest Facility has one permitted Transfer and Storage Unit for transfer and storage of hazardous waste. There are four rail tank cars stationed at the rail spur at any given time. Each rail tank car has a rail track pan for collecting drips and possible spills. Two of the rail track pans connected by a collection header or drain pipe to an open sump. Transfer of hazardous waste from the tanker truck or vacuum truck parked on a concrete pad into the rail tank car is only allowed at rail tank cars that have rail track pans connected to the open sump. Transfer of hazardous waste from the tanker truck or vacuum truck is not allowed at the other two rail tank cars whose rail track pans are not connected to the open sump. Hazardous waste in each rail tank is stored at this facility up to ten days prior to shipment to various treatment, storage, recycling, or disposal facilities throughout the country.

The type of hazardous wastes allowed at the facility is Oily Water, Lean Water, Fuels, Aqueous Solution and Recyclable Liquids.

DTSC issued a Standardized Hazardous Waste Facility Permit on October 26, 2007. The Permit became effective on November 27, 2007 and expires on November 26, 2017. The maximum hazardous waste transfer and storage capacity at the Lenfest Facility at any given time is 56,500 gallons.

The Lenfest Facility only accepts bulk liquid hazardous wastes originating from Clean Harbors San Jose, LLC, located at 1021 Berryessa Road, San Jose, California (Berryessa Facility). The Berryessa Facility has a Hazardous Waste Facility Permit for treatment and storage of hazardous waste and provides the staff, supervision and management for the Lenfest Facility. The Berryessa Facility also provides Lenfest Facility with registered hazardous waste transporters or licensed third party haulers to transport hazardous wastes in closed tanker trucks or vacuum trucks from the Berryessa Facility to the Lenfest Facility. Both the Berryessa Facility and Lenfest Facility are operated by Clean Harbors San Jose LLC, located at 1021 Berryessa Road, San Jose, California. The distance between the Berryessa Facility and the Lenfest Facility is approximately one mile.

The Lenfest Facility has one permitted Transfer and Storage Unit for transfer and storage of hazardous waste. There are four rail tank cars stationed at the rail spur at any given time. Each rail tank car has a rail track pan for collecting drips and possible spills. Two of the rail track pans connected by a collection header or drain pipe to an open sump. Transfer of hazardous waste from the tanker truck or vacuum truck parked on a concrete pad into the rail tank car is only allowed at rail tank cars that have rail track pans connected to the open sump. Transfer of hazardous waste from the tanker truck or vacuum truck is not allowed at the other two rail tank cars whose rail track pans are not connected to the open sump. Hazardous waste in each rail tank is stored at this facility up to ten days prior to shipment to various treatment, storage, recycling, or disposal facilities throughout the country.

Site History:

California Electro-Plating Company (CEPCO) was located in suites B, C, and D (3 of 5 separate lease units, 9,500 square feet). The building is in an industrial area of San Jose. California Electro-Plating Company (CEPCO) was in operation at this site from 1974 to 1993. CEPCO's shop caught fire on July 1, 1993 and the business was destroyed. The U.S. EPA took jurisdiction of the containment and cleanup activities in conjunction with the City of San Jose Fire Department and Hazardous Materials Department. The City of San Jose, after conferring with the Fire Department and Hazardous Materials issued an occupancy permit after completion of the repairs. CEPCO did not return to the building after it was cleaned and repaired. A CERCLA Screening Site Inspection was done in 1991 with the recommendation of "No Further Action (NFA) based on sampling results very low metal (Cadmium, Chromium, Copper, Nickel, Zinc, Lead) concentrations below the concrete floor, the lack of potential impact on groundwater, and Environmental Protection Agency (EPA) and San Jose Fire Department study results". The site is listed under the EPA as an Archive (NFRAP) Site. Current occupant of suites C and D is Filtek Engineering and Black Bear Corporation, a Material Handling Equipment Supplier, occupies Suite B. The other occupants of this building area are as follows: In Suite A, TiSys Construction and Development, and Suite Suite E, A-1 Printing, Ruiz and Sons. During the drive-by, a drum of coolant, valcool, was visible outside the rollup door, and a drill press and lathe were visible inside the building. No other chemical or waste containers were visible. There are no known tenants currently at this site that either store or use hazardous materials.

Site was cleared of the fire debris and pressure washed. Soil sampling also occurred under the process equipment in the native dirt and analysed for chromium, copper, lead, nichel, zinc, total cyanide, and pH.

Site History:

Ultra-Chem operated in the industrial complex space 425 from June 1980 until 1982. Space 460 was rented in 1981 to early 1983 when all operations moved to 1310 Old Bayshore (see Moyer Chemical Company). Ultra-Chem was a distributor of proprietary chemicals for commercial, industrial use (cleaners, deoxidizers, phosphates, and degreasers) and also had a lacquer thinner reclamation business at unit 460. Ultra-Chem submitted a closure plan in February 1983. Department of Health Services (DHS), predecessor to Department of Toxic Substances Control (DTSC) approved the plan in March 1983. Closure was completed by April 1983. DTSC certified the closure on April 28, 1983 and issued a No Further Action recommendation for the Ultra Chem 425-460 Reynolds Circle site on January 18, 2002. (Ultra-chem moved all its operations to 1310 Old Bayshore formerly occupied by Moyer Chemical) Details of ongoing site activities can be found at the second listing for ULTRA-CHEM (ID - 43280013).

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Feb 6, 2019

National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Feb 6, 2019

Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Feb 6, 2019

SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Feb 6, 2019

Inventory of Open Dumps, June 1985:

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites:

SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Feb 6, 2019

Comprehensive Environmental Response, Compensation and Liability Information System -

CERCLIS

CERCLIS:

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands:

IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned:

CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens:

CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action:

RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Dec 17, 2018

RCRA non-CORRACTS TSD Facilities:

RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Dec 17, 2018

RCRA Generator List:

RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Dec 17, 2018

RCRA Small Quantity Generators List:

RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Dec 17, 2018

RCRA Conditionally Exempt Small Quantity Generators List:

[RCRA CESQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt Small Quantity Generators (CESQG) generate 100 kilograms or less per month of hazardous waste or one kilogram or less per month of acutely hazardous waste.

Government Publication Date: Dec 17, 2018

RCRA Non-Generators:

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Dec 17, 2018

Federal Engineering Controls-ECs:

[FED ENG](#)

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 20, 2016

Federal Institutional Controls- ICs:

[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Jan 20, 2016

Emergency Response Notification System:

[ERNS 1982 TO 1986](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System:

[ERNS 1987 TO 1989](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System:

[ERNS](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Sep 24, 2018

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:

[FED BROWNFIELDS](#)

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 11, 2019

FEMA Underground Storage Tank Listing:

[FEMA UST](#)

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

LIEN on Property:

SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Feb 6, 2019

Superfund Decision Documents:

SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Feb 12, 2019

State

State Response Sites:

RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Mar 11, 2019

EnviroStor Database:

ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Mar 11, 2019

Delisted State Response Sites:

DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Mar 11, 2019

Solid Waste Information System (SWIS):

SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Feb 11, 2019

EnviroStor Hazardous Waste Facilities:

HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Mar 11, 2019

Land Disposal Sites:

LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Nov 30, 2018

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report:

SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Leaking Underground Fuel Tank Reports:

LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Delisted Leaking Storage Tanks:

[DELISTED LST](#)

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: March 11, 2019

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels:

[SWRCB SWF](#)

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

Permitted Underground Storage Tank (UST) in GeoTracker:

[UST](#)

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Nov 30, 2018

Proposed Closure of Underground Storage Tank Cases:

[UST CLOSURE](#)

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: Mar 11, 2019

Historical Hazardous Substance Storage Information Database:

[HHSS](#)

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Aboveground Storage Tanks:

[AST](#)

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

Delisted Storage Tanks:

[DELISTED TNK](#)

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Mar 11, 2019

California Environmental Reporting System (CERS) Tanks:

[CERS TANK](#)

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Feb 13, 2019

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions:

[LUR](#)

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Mar 11, 2019

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions:

[HLUR](#)

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Deed Restrictions and Land Use Restrictions:

[DEED](#)

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Nov 30, 2018

Voluntary Cleanup Program:

[VCP](#)

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Mar 11, 2019

GeoTracker Cleanup Sites Data:

[CLEANUP SITES](#)

A list of cleanup sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Nov 30, 2018

Delisted California Environmental Reporting System (CERS) Tanks:

[DELISTED CTNK](#)

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Feb 13, 2019

Historical Hazardous Substance Storage Container Information - Facility Summary:

[HIST TANK](#)

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in the 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

[INDIAN UST](#)

USTs on Tribal/Indian Lands in Region 9, which includes California.

Government Publication Date: Dec 31, 2017

Delisted Tribal Leaking Storage Tanks:

[DELISTED ILST](#)

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

Delisted Tribal Underground Storage Tanks:

[DELISTED IUST](#)

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

Government Publication Date: Oct 14, 2017

Delisted County Records:

[DELISTED COUNTY](#)

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: Mar 26, 2019

Orange County - Anaheim City UST Cleanup Cases:

[UST CLEANUP](#)

A list of UST Cleanup Cases in the City of Anaheim in Orange County. As part of its Groundwater Protection Program, the City of Anaheim managed the UST Cleanup Oversight Program from April 1991 to June 2014. This list is published by the City of Anaheim Underground Storage Tank Cleanup Program.

Government Publication Date: May 26, 2015

San Francisco County - Maher Ordinance:

[MAHER SF](#)

List of development projects that are located on sites with known or suspected soil and/or groundwater contamination are subject to the provisions of Health Code Article 22A, which is administered by the San Francisco County Department of Public Health (DPH).

Government Publication Date: Jan 23, 2019

Santa Clara County - City of San Jose Hazardous Material Facilities:

[SANJOSE HM](#)

A list of facilities with hazardous materials, including underground and aboveground tanks. This list is maintained by the City of San Jose Fire Department.

Government Publication Date: Feb 1, 2019

Santa Clara County - Gilroy City CUPA Facilities List:

[GILROY CUPA](#)

The Gilroy City Fire Marshal's office maintains a list of CUPA Facilities located in Gilroy City.

Government Publication Date: Jan 30, 2019

Santa Clara County - CUPA Facilities List:

[SANTA CLARA CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Santa Clara County. This list is made available by Santa Clara County Department of Environmental Health (DEH). DEH's Hazardous Materials Compliance Division (HMCD) is CUPA for the county with jurisdiction within the Cities of Los Altos Hills, Monte Sereno, and Saratoga; and in all unincorporated areas of Santa Clara County, including Moffett Field, San Martin, and Stanford.

Government Publication Date: Jan 23, 2019

Santa Clara County - Historic Solvent Case Listing:

[SANTA CLARA HSOL](#)

The Santa Clara Valley Water District was responsible for the oversight of solvent and toxic release cases and maintained a list of historic solvent cases in Santa Clara County.

Government Publication Date: Aug 22, 2016

Santa Clara County - Local Oversight Program Listing:

[SANTA CLARA LO](#)

A list of Leaking Underground Storage Tanks (LUST) facilities in Santa Clara County Provided by Santa Clara Department of Environmental Health (DEH). Since July 1, 2004 the DEH has served as the oversight agency for investigations and clean-up of petroleum releases from underground storage tanks through implementation of the Local Oversight Program (LOP) contract with the State Water Resources Control Board.

Government Publication Date: Jun 14, 2017

Santa Clara County - Sunnyvale City CUPA List:

[SUNNYVALE CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Sunnyvale City, Santa Clara County. This list is made available by the Fire Prevention & Hazardous Materials division of the Sunnyvale Department of Public Safety.

Facility Registry Service/Facility Index:

[FINDS/FRS](#)

The US Environmental Protection Agency (EPA)'s Facility Registry System (FRS) is a centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, data collected from EPA's Central Data Exchange registrations and data management personnel.

Toxics Release Inventory (TRI) Program:

TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Toxic Substances Control Act:

TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Jun 30, 2017

Hist TSCA:

HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

State Coalition for Remediation of Drycleaners Listing:

SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Integrated Compliance Information System (ICIS):

ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Nov 18, 2016

Drycleaner Facilities:

FED DRYCLEANERS

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: May 29, 2018

Delisted Drycleaner Facilities:

DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: May 29, 2018

Formerly Used Defense Sites:

FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Oct 23, 2018

Material Licensing Tracking System (MLTS):

MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Nov 1, 2018

Historic Material Licensing Tracking System (MLTS) sites:

HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Mines Master Index File:

MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 30, 2018

Alternative Fueling Stations:

ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Jan 15, 2019

Registered Pesticide Establishments:

SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Sep 1, 2018

Polychlorinated Biphenyl (PCB) Notifiers:

PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

State

Dry Cleaning Facilities:

[DRYCLEANERS](#)

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Jan 18, 2019

Delisted Drycleaners:

[DELISTED DRYCLEANERS](#)

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Jan 18, 2019

Non-Toxic Dry Cleaning Incentive Program:

[DRYC GRANT](#)

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Hazardous Waste and Substances Site List - Site Cleanup:

[HWSS CLEANUP](#)

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Dec 4, 2018

List of Hazardous Waste Facilities Subject to Corrective Action:

[DTSC HWF](#)

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement:

[INSP COMP ENF](#)

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Jan 21, 2019

School Property Evaluation Program Sites:

[SCH](#)

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Mar 11, 2019

California Hazardous Material Incident Report System (CHMIRS):

[CHMIRS](#)

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 25, 2019

Hazardous Waste Manifest Data:

[HAZNET](#)

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical California Hazardous Material Incident Report System (CHMIRS):

[HIST CHMIRS](#)

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Historical Hazardous Waste Manifest Data:

[HIST MANIFEST](#)

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

Historical Cortese List:

[HIST CORTESE](#)

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders:

[CDO/CAO](#)

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites:

[CERS HAZ](#)

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Feb 13, 2019

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites:

[DELISTED HAZ](#)

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Waste Discharge Requirements:

[WASTE DISCHG](#)

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Nov 30, 2018

Toxic Pollutant Emissions Facilities:

[EMISSIONS](#)

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2016

Clandestine Drug Lab Sites:

[CDL](#)

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/ clandestine drug laboratories.

Government Publication Date: Dec 31, 2017

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.
