**Site History:**

In October 2005, petroleum hydrocarbons were detected at the site during the removal of one 10,000 gallon gasoline underground storage tank (UST) and associated piping and dispenser. Concentrations of total petroleum hydrocarbons (TPH) as gasoline in soil samples collected at 3 and 14 feet beneath the UST's remote fill were 770 and 1,500 milligrams per kilogram (mg/kg). In June 2006, one boring, B1, was drilled to groundwater, which was found at 80 feet. In October 2006, four wells were installed at the site. MW1 was installed at the location of boring B1. Methyl tertiary butyl ether (MtBE) was detected in the soil samples collected from B1 every five feet from 15 to 80 feet below ground surface. The MtBE concentrations ranged from 0.0051 to 310 mg/kg. The highest concentrations of petroleum hydrocarbons were detected in the soil sample collected from B1 at a depth of 35 feet. TPH as gasoline, benzene, toluene, ethylbenzene and xylenes (BTEX) were detected in this sample at concentrations of 15,000 mg/kg, 25 mg/kg, 470 mg/kg, 150 mg/kg and 830 mg/kg, respectively. MtBE was also detected in soil samples collected from: MW2 at depths of 30 to 70 feet below surface at concentrations from 0.0074 to 1.9 mg/kg; MW3 at depths of 15 to 70 feet at concentrations ranging from 0.0013 to 17 mg/kg; and MW3 at depths of 45 to 60 feet at concentrations ranging from 0.0056 to 0.20 mg/kg. In October 2006, groundwater samples were collected from the four wells. MtBE detected in the samples from MW1 through MW3 ranged from 7.5 to 1,300 micrograms per liter (µg/l). Groundwater concentrations in MW1 have decreased with time and in May 2010, TPH, BTEX and oxygenates were not detected in groundwater from the four wells at the site. On June 21, 2010, SB County LOP requested either a meeting with RP to discuss closure criteria, a workplan for further investigation or a closure request. On July 13, 2010, Ecology Auto Parts requested closure from the County of San Bernardino Office of the Fire Marshal Hazardous Materials Division (County). On August 5, 2010, Ms. Marilyn Kraft of the County transferred this case to our office for Regional Board oversight. County staff did not agree that the case should be closed. An extended vapor extraction test was required to determine the mass and availability of MtBE in soil. Also, an additional downgradient well was required to verify that the plume did not migrate downgradient of well MW1.

**Site History:**

Letter dated 08/04/16, from Santa Ana Regional Water Quality Control Board (SARWQCB) transferring regulatory oversight to DTSC. 09/11/2017: Review of background information indicates that DTSC emergency response conducted a cleanup of hazardous waste left at the facility in 2013. Solid and sludge waste was left at the Site for removal by USEPA emergency response. USEPA removed remaining waste and collected sub-slab soil samples underneath the plating line and hazardous waste treatment area to determine if site operations impacted soil. Samples were analyzed for metals, VOCs, pH, and hexavalent chromium. Arsenic concentrations at the site exceeded the EPA RSL for industrial soil (1.6 ppm) and the site was referred to the Regional Waterboard to further investigation. Additional soil investigation was conducted under the oversight of the Santa Ana Regional Water Quality Control Board in 2016. Six soil samples were analyzed for VOCs, pH, CAM 17 metals, and hexavalent chromium. Results indicate that soil pH is low and metals fall within background levels.

**Facility History:**

**QUARTERLY UPDATE**

Quarterly Update Period: July to September 2020

**Permit Renewal:**

HAZMAT TSDf, Inc. (HAZMAT), formerly known as Filter Recycling Services, Rialto (FRS), submitted a permit renewal application on July 12, 2011. DTSC is reviewing the permit renewal application for technical completeness. DTSC issued a third Notice of Deficiency on May 31, 2019. DTSC held a call with facility representatives on August 13, 2019 to discuss the third Notice of Deficiency. DTSC received the response to the third Notice of Deficiency and revised application on September 13, 2019.

**FACILITY DESCRIPTION/HISTORY**

HAZMAT is located at 180 West Monte Avenue in Rialto. It is located in an industrial area, the Agua Mansa Industrial Corridor, zoned H-IND, Heavy Industrial. The Agua Mansa Redevelopment Project begun in the late 1980s has led to the gradual replacement of old orchard land with a variety of industrial operations. The Facility has been in operation at its present location since 1990. The Facility is permitted to store liquid and solid hazardous waste in containers. Wastes that are stored at the site include used oil, paint, ink, resins/glues, and oil contaminated soil/debris and other solids. The six treatment units at the site include: #1 Shredder/Separator, #2 Shredder/Separator – Paint Waste, #3 Drum Crusher/Bailer, #4 Aerosol Can Puncturing – Paints, #5 Aerosol Can Puncturing - Oil, and #7 Container Decontamination. The four storage units at the site include: #8 Waste Storage (Interior), #9 Waste Storage (Exterior), #10 Waste Storage (Interior Area 10), and #11 Waste Storage (Exterior South Area).

**PERMITTING REGULATORY DESCRIPTION/HISTORY**

FRS was granted Interim Status in 1993. A 1997 Consent Order allowed FRS to continue to operate as a treatment and storage facility pending final decision on its standardized permit application. DTSC issued a Standardized Hazardous Waste Facility Permit on December 17, 2001. The decision was appealed. The permit decision was stayed and FRS continued to operate under the terms and conditions of the Consent Order. On October 23, 2006, DTSC rescinded the stay of the permit decision and the Standardized Permit became effective with an expiration date of January 21, 2012. FRS submitted a timely application dated July 12, 2011 to renew the permit. Prior to the expiration of the permit, FRS had also submitted a Class 2 permit modification to add waste streams and allow truck-to-truck transfer among other operational changes. DTSC issued the permit modification decision on April 21, 2014. FRS appealed the decision and the permit modification decision was stayed. On March 20, 2015, DTSC rescinded the stay of the permit decision and the modified permit became effective. FRS then challenged the decision which resulted in a 2016 court decision remanding the modified permit. DTSC issued an Order on Remand to comply with the order and issued the remanded modified permit on December 21, 2016. The permit renewal application is currently being reviewed for technical completeness.

# Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:*

*"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."*

#### Formerly Utilized Sites Remedial Action Program:

[DOE FUSRAP](#)

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

**Government Publication Date: Mar 4, 2017**

#### National Priority List:

[NPL](#)

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

**Government Publication Date: Dec 30, 2021**

#### National Priority List - Proposed:

[PROPOSED NPL](#)

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

**Government Publication Date: Dec 30, 2021**

#### Deleted NPL:

[DELETED NPL](#)

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

**Government Publication Date: Dec 30, 2021**

#### SEMS List 8R Active Site Inventory:

[SEMS](#)

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

**Government Publication Date: Dec 30, 2021**

#### SEMS List 8R Archive Sites:

[SEMS ARCHIVE](#)

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

**Government Publication Date: Dec 30, 2021**

**Inventory of Open Dumps, June 1985:**

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

**Government Publication Date: Jun 1985**

**Comprehensive Environmental Response, Compensation and Liability Information System -**

CERCLIS

**CERCLIS:**

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

**Government Publication Date: Oct 25, 2013**

**EPA Report on the Status of Open Dumps on Indian Lands:**

IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

**Government Publication Date: Dec 31, 1998**

**CERCLIS - No Further Remedial Action Planned:**

CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

**Government Publication Date: Oct 25, 2013**

**CERCLIS Liens:**

CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Jan 30, 2014**

**RCRA CORRACTS-Corrective Action:**

RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

**Government Publication Date: Jan 31, 2022**

**RCRA non-CORRACTS TSD Facilities:**

RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

**Government Publication Date: Jan 31, 2022**

**RCRA Generator List:**

RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

**Government Publication Date: Jan 31, 2022**

**RCRA Small Quantity Generators List:**

[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

**Government Publication Date: Jan 31, 2022**

**RCRA Very Small Quantity Generators List:**

[RCRA VSQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

**Government Publication Date: Jan 31, 2022**

**RCRA Non-Generators:**

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

**Government Publication Date: Jan 31, 2022**

**RCRA Sites with Controls:**

[RCRA CONTROLS](#)

List of Resource Conservation and Recovery Act (RCRA) facilities with institutional controls in place. RCRA gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances.

**Government Publication Date: Jan 31, 2022**

**Federal Engineering Controls-ECs:**

[FED ENG](#)

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Dec 30, 2021**

**Federal Institutional Controls- ICs:**

[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

**Government Publication Date: Dec 30, 2021**

**Land Use Control Information System:**

[LUCIS](#)

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

**Government Publication Date: Sep 1, 2006**

**Emergency Response Notification System:**

[ERNS 1982 TO 1986](#)

**Emergency Response Notification System:**

[ERNS](#)

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

**Government Publication Date: Dec 31, 2021**

**The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:**

[FED BROWNFIELDS](#)

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

The following table lists the data sources searched and any hits in the Area of Concern (AOC) that have been included in the report. The search distances listed are based on search distances used in the Database Report and the search results are grouped based on the minimum default search distances for Chemicals of Concern (COCs) and Petroleum Hydrocarbon Chemicals of Concern (PHCOCs) as outlined in E2600-15. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment.
