NOTICE OF INTENT TO ADOPT MITIGATED NEGATIVE DECLARATION

HERMOSILLO PARK STORMWATER CAPTURE AND PARK REHABILITATION PROJECT

Lead Agency: City of Norwalk, Engineering Division; 12700 Norwalk Boulevard, Norwalk, CA 90650

Contact: Run Chen, (562) 929-5724, rchen@norwalkca.gov

The City of Norwalk (City), as the lead agency under the California Environmental Quality Act (CEQA), has prepared and plans to adopt a Mitigated Negative Declaration (MND) for the Hermosillo Park Stormwater Capture and Park Rehabilitation Project (project). The City is hereby notifying agencies and members of the public that may be interested in the project as to the availability of the MND, and the procedures for public review and comment on the document.

Project Location: The project is located within Hermosillo Park, an outdoor public recreation facility owned and maintained by the City that is located north of 162nd Street, east of Clarkdale Avenue and west of Horst Avenue.

Project Description: The project entails constructing and operating a stormwater capture, treatment, and infiltration facility within the northern portion of the park, and implementing a comprehensive park rehabilitation project to replace existing park features with improved amenities. The stormwater capture and filtration facility would intercept stormwater and dry-weather flow from two existing storm drains and convey flows into a treatment system and a series of three underground reservoirs that would be installed beneath proposed soccer fields for infiltration into the groundwater basin. An outflow pipe would be installed to convey excess water from the reservoirs back to the storm drains during heavy storms when all the water is not able to infiltrate. Park improvements would include a new, larger community center building; replacing the two existing multi-use grass fields with new soccer fields; replacing the basketball and handball courts; and replacing the existing fountain with a children's splash pad water feature. The parking lot would be reconfigured and expanded to provide additional on-site parking.

Environmental Effects: The MND identifies potentially significant impacts with respect to air quality, biological resources, geology and soils, hazards and hazardous materials, and tribal cultural resources. Mitigation measures have been incorporated into the project that either avoid the project's impacts or reduce them to less-than-significant levels.

Availability of Document: The MND is being made available for public review commencing on April 30, 2024, and ending on May 20, 2024. The MND and supporting appendices are available for review at the City of Norwalk's website: https://www.norwalkc.org/city-hall/meeting-agendas/public-notifications.

Comments: The City will be accepting written comments on the MND for consideration prior to adoption of the document. **Comments must be received no later than 5:00 p.m. on May 20, 2024**, and can be submitted by mail to:

City of Norwalk
12700 Norwalk Boulevard
Norwalk, CA 90650
Attn: Run Chen

Comments will also be accepted by email to Run Chen at rchen@norwalkca.gov. Please include **"Hermosillo Park Project MND Comments"** in the email subject line.

Public Hearing: The Nowalk City Council will hear public comments on the MND and consider adoption of the MND at their meeting on May 21, 2024. Interested parties are invited to review the MND at: https://www.norwalkc.org/city-hall/meeting-agendas/public-notifications. The MND is available for in-person review by visiting City Hall Room 12. Written comments may be submitted via mail or email. Address written comments: Attention: Engineering Division – Run Chen, P.E., at the address noted above or by email to rchen@norwalkca.gov.

Dated this 29th day of April 2024.

Theresa Devoy, CMC
City Clerk

1 Introduction

The City of Norwalk (City) has prepared this mitigated negative declaration (MND) to assess and disclose the potential impacts on the environment of the Hermosillo Park Stormwater Capture and Park Rehabilitation Project (project) pursuant to the California Environmental Quality Act (CEQA) (California Public Resources Code [PRC] Section 21000, et. seq). This section of the MND provides information on project background, explains the project's purpose and need, and describes the City's CEQA obligations associated with approving and implementing the project.

1.1 Project Background and Overview

Hermosillo Park is a multipurpose public recreation facility operated by the City's Recreation and Park Services Department. It is located in the southern portion of the City at 162nd Street, east of Clarkdale Avenue and west of Horst Avenue. Additional information regarding Hermosillo Park is provided in Section 2.1, Project Location and Environmental Setting. Most existing amenities at Hermosillo Park date back to the 1970s. The City prepared a Parks Master Plan in 2008 that identified the need for improvements and additional recreation features at Hermosillo Park. In 2018 the City began the planning work on a comprehensive rehabilitation project, and they initiated public outreach in 2019 to solicit input from neighbors and park users to guide the planning process. In March 2021, the City applied for grant funding under the California Department of Parks and Recreation's Statewide Park Development and Community Revitalization Program, which provides financial resources for park projects in underserved communities across the state (California Department of Parks and Recreation 2023). While proceeding with the planning process for the rehabilitation project at Hermosillo Park, the City recognized an opportunity to combine that project with a stormwater improvement project using funds from the Los Angeles County Flood Control District's Safe Clean Water Program, which was created by voter approval of Los Angeles County's Measure W in 2018 (County of Los Angeles 2023).

The City is a member of the Lower San Gabriel River Watershed Group (Watershed Group) and is the coordinating agency for the Watershed Group's Watershed Management Program (WMP) and Coordinated Integrated Monitoring Program. The Watershed Group formed to plan, implement, and manage water quality control projects in the watersheds of the Lower San Gabriel River (LSGR) and its tributaries, including Coyote Creek (Los Angeles RWQCB 2023). The Watershed Group is a collaborative effort of 13 municipalities,[1] the California Department of Transportation, and the Los Angeles County Flood Control District, which respectively are governed by the Los Angeles County Municipal Separate Storm Sewer System (MS4) Permit (Order No. R4-2012-0175), the Long Beach MS4 Permit (Order R4-2014-0024), and the California Department of Transportation Stormwater Permit (Order 2012-0011-DWQ). The LSGR watershed comprises 78.5 square miles in the southeastern portion of Los Angeles County, draining into the Pacific Ocean via a channelized portion of the San Gabriel River, along the border of the Cities of Long Beach and Seal Beach (Watershed Group 2017). The Watershed Group prepared the WMP in 2015 (updated in 2017) to plan and prioritize projects implementing the requirements of the MS4 permits on a watershed scale (Watershed Group 2017). Several potential sites for implementing projects to capture and treat stormwater runoff within the watershed are identified in the WMP, including the City's Hermosillo Park.

A 10-foot by 10-foot reinforced concrete box storm drain operated by Los Angeles County Flood Control District runs north to south through the center of Hermosillo Park, and a 108-inch-diameter storm drain operated by Los Angeles

[1] The LSGR Watershed Group municipalities are Norwalk, Artesia, Bellflower, Cerritos, Diamond Bar, Downey, Hawaiian Gardens, La Mirada, Lakewood, Long Beach, Pico Rivera, Santa Fe Springs, and Whittier.

County Flood Control District runs north to south within Horst Avenue, approximately 350 feet east of the park. Based on the park's proximity to these two large-capacity drainage facilities, the WMP identified Hermosillo Park as an appropriate site for developing stormwater capture and treatment infrastructure. The City is now considering approval of such a project. The stormwater capture component of the project would divert and capture stormwater runoff from the two existing storm drain facilities into three subterranean concrete basins proposed beneath the park's existing grass fields. Prior to flow into the subsurface basins, runoff would be directed through a pre-treatment device that would remove trash, sediments, and solids present in the runoff. The basins would have permeable floors to allow physical infiltration of the pre-treated water into the ground to help recharge local groundwater and minimize the volume of water that must be conveyed by the existing storm drains. An outflow pipe and filtration pump unit would be installed to accommodate water during periods of heavy storm flow when the reservoir fills to its capacity, treating the water again before discharging it into the existing storm drain beneath Hermosillo Park. This project has the potential to offer runoff storage and water quality benefits for the City and other Watershed Group members, helping to achieve WMP goals and MS4 permit compliance.

Concurrently with construction of the proposed stormwater capture and filtration facility, the City also intends to implement other park improvements as part of this project to benefit community members and the environment. These improvements include installing two turf soccer fields with concrete bleacher seating, replacing the existing community center and restrooms building, replacing the existing basketball and handball courts, replacing the amphitheater and outdoor community events space, replacing and modernizing existing picnic areas and walking paths, adding shade structures, and reconfiguring and expanding the parking lot. Additional information on park improvements is provided in Section 2.2, Project Characteristics.

The City is implementing the project in their capacity as an MS4 permittee and member of the WMP and would be responsible for operating and maintaining the project facilities. The City has completed initial design of the stormwater capture project and park rehabilitation and issued a design-build contract to complete the remaining design needs and construction work. Approval of the design-build contract's grading plan by the City Council would be the discretionary action of the City subject to CEQA compliance.

1.2 Purpose and Need

The project's primary purpose is to decrease the amount of pollutants in stormwater and dry-weather runoff entering Coyote Creek and the San Gabriel River. The Watershed Group has identified a need for watershed control measures and structural best management practices (BMPs) to address water quality objectives within the watershed. The City has identified the additional needs of rehabilitating and modernizing public recreation facilities at Hermosillo Park and addressing concern for public safety at the park. The City's objectives in implementing the project are as follows:

- Improve water quality in Coyote Creek, San Gabriel River, and local groundwater basin
- Rehabilitate and improve public facilities at Hermosillo Park
- Add soccer fields at Hermosillo Park
- Add a police substation to the community center building to improve public safety at Hermosillo Park
- Increase vehicle parking capacity at Hermosillo Park to reduce reliance on street parking in the adjacent neighborhood

1.3 California Environmental Quality Act Compliance

1.3.1 Authority to Prepare an MND

Approval by the Norwalk City Council to allow commencement of project construction activity constitutes a discretionary action that triggers environmental review requirements pursuant to CEQA, with the City serving as lead agency. The City prepared a CEQA initial study (IS) to analyze and consider the environmental impacts of implementing the project, which is included as Chapter 3 of this document. Based on the results of the IS, the City determined that an MND is the appropriate environmental document for compliance with CEQA. As stated in Section 21064 of the CEQA statute, an MND may be prepared for a project subject to CEQA when an IS has identified no potentially significant effects on the environment when mitigation is identified that can reduce impacts to less-than-significant levels.

1.3.2 Public Review and Final MND Process

The City is making the MND available for public review and comment pursuant to Section 15073 of the CEQA Guidelines. A copy of the MND and related documents are available for review on the City's website (https://www.norwalkc.org/city-hall/meeting-agendas/public-notifications). The City has identified a 20-day review and comment period for the MND commencing April 29, 2024, and terminating May 20, 2024.

Comments on the MND may be submitted to the City in writing before the end of the public review period. In reviewing and commenting on the MND, interested public agencies and members of the public should focus on the adequacy of the document in identifying and analyzing the project's potential impacts on the environment. Written comments on the IS/MND will be accepted in hard copy or email format, and should be received at the following street address or email address by 5:00 p.m., May 20, 2024:

City of Norwalk
12700 Norwalk Boulevard
Norwalk, California 90650
Contact: Run Chen
Email: RChen@norwalkca.gov

Following the close of the public comment period, City staff will review all comments and may revise the MND if necessary to clarify the document's content. City staff will then prepare a final version of the MND that includes all comment letters received during the public review period and will send the MND to the City Council for adoption and consideration in their decision to approve the project.

The City has hired a design-build contractor to complete project design and construction. The environmental impact review presented in this MND is based on an initial design of the stormwater capture project (10% design) and a conceptual design of the park rehabilitation improvements, both of which were prepared by different companies not affiliated with the design-build contract. As additional design is completed following the City Council's adoption of the MND, City staff will review project details, compare them to the information presented in the MND, and determine conformance with the project's CEQA record. Minor deviations from the design assumed in the MND may be addressed either by a consistency determination by City staff or by an addendum to the MND. If subsequent changes in the project are substantial to the extent that they "require major revisions of the previous…negative

declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects," then the City would be required by Section 15162 of the CEQA Guidelines to prepare a subsequent MND, initiate an additional CEQA public review period, and send the subsequent MND to the City Council for adoption.

In November 2019, the City prepared a Notice of Exemption for the park rehabilitation project to accompany their Statewide Park Development and Community Revitalization Program grant application and filed the Notice of Exemption with the Los Angeles County Clerk pursuant to Section 15062 of the CEQA Guidelines. The park rehabilitation component of the project on its own is exempt from CEQA, but because it is being constructed in conjunction with the stormwater capture project that is not exempt from CEQA, the City has prepared this MND to address the environmental impacts of the entire project. If the City Council adopts the MND, City staff will prepare a Notice of Determination, which would supersede the 2019 Notice of Exemption, and file the Notice of Determination with the Los Angeles County Clerk and the California Office of Planning and Research State Clearinghouse.

2 Project Description

2.1 Project Location and Environmental Setting

The project is located in the southern portion of the City, which is in southern Los Angeles County, as shown in Figure 1, Project Location. The project site covers the entirety of Hermosillo Park, a recreation facility maintained by the City. The park is in a developed part of the City that primarily features residential development, along with areas of commercial, light industrial, and public uses. The park is bounded on the south by 162nd Street and on the north, east, and west by single-family residential properties. On the park's eastern and western sides, Algardi Street and 161st Street feature cul de sacs that abut the park, with gates providing pedestrian access but no vehicle access. Similar access is available from a Cobos Street cul de sac on the park's northern side. Sanchez Elementary School is located southwest of Hermosillo Park, across 162nd Street. Regional access to the park is from State Route (SR) 91, which is approximately 0.5 miles to the south; Interstate 605, which is approximately 1.5 miles to the west; and Interstate 5, which is approximately 1.5 miles to the northeast. A concrete-lined span of the San Gabriel River flows north to south approximately 1.75 miles west of Hermosillo Park. The site is designated as Open Space/Schools/Public Facilities in the City General Plan Land Use Map (City of Norwalk 2020) and is zoned as R1 (single-family residential) in the City Zoning Map (City of Norwalk 2023).

Hermosillo Park features flat terrain and is approximately 9 acres. Existing park uses are shown in Figure 2, Project Site and Existing Features. The northern half of the park features large grass fields and several picnic areas. The southern half of the park features a community center and restroom building, a concrete fountain, a children's playground, a small concrete amphitheater, one full-court basketball court, a four-court handball court, additional picnic areas, and an entry monument sign. An asphalt parking lot is located along the eastern side of the park's southern boundary, accessed from 162nd Street, and features 18 regular parking spaces, one handicapped parking space, and dumpster storage. A concrete walking path runs around the park's perimeter and to the various recreational uses in the southern part of the park. Mature trees grow in various areas around the park. An irrigation system with underground pipes and sprinkler heads is in place throughout the park. City representatives have reported the park is a popular destination for recreation and social gatherings and is often overcrowded during peak times. The grass fields are not currently used by formal team-sports leagues, but accommodate team practices and informal groups that meet to play soccer and engage in other recreational activities.

2.2 Project Characteristics

The project entails constructing and operating a stormwater capture, treatment, and infiltration facility within the northern portion of Hermosillo Park and implementing a comprehensive park rehabilitation project to replace existing park features with improved amenities that will be similar in nature to the existing features. The project is currently in the preliminary design phase, and the City has developed certain design and engineering assumptions for purposes of defining the project for informational purposes and conducting environmental impact review pursuant to CEQA. Actual details of the project may vary from the information provided below.

2.2.1 Stormwater Capture Project

The stormwater capture, filtration, and infiltration facility would intercept stormwater and dry-weather flow from two existing storm drains and convey flows into a series of three underground reservoirs that would be installed beneath

the proposed soccer fields for infiltration into the groundwater basin. An outflow pipe would be installed to convey excess water from the reservoirs during heavy storms when all the water is not able to infiltrate. The water would pass through a filtration system before discharging back into one of the existing storm drains. The stormwater capture project features are shown in Figure 3, Proposed Stormwater Capture and Treatment System.

Stormwater Diversion Infrastructure and Pretreatment Devices

Two stormwater diversion structures would be constructed to connect the proposed system to existing storm drains beneath the park and in Horst Avenue. The diversion structures would be underground concrete vaults encasing the existing storm drains and connecting to 36-inch-diameter underground diversion pipelines. Each diversion structure would have a manhole for personnel and equipment access. One diversion pipeline would be entirely within the park boundaries, and the other would be installed beneath Algardi Street. The Algardi Street diversion structure and pipeline would carry water by gravity into an underground pretreatment device and then to the storm drain running beneath the park, which is larger and has greater capacity than the Horst Avenue storm drain. The second diversion structure and diversion pipeline would be downstream of that initial diversion pipeline outlet, which would allow the system to capture and divert water originating in the larger storm drain beneath the park and water diverted from the Horst Avenue facility. The diversion pipeline within the park would operate by an underground electric pump to pull water through an underground pretreatment device and then discharge into the reservoirs.

The pretreatment devices would be installed along the diversion pipeline alignment, with one located beneath the park and the other beneath Algardi Street. Each would be installed inside concrete vaults with manholes for personnel and equipment access. The devices typically are hydrodynamic separators, which direct water through a screen to filter out large debris and into a cylindrical separation chamber where water swirls and forces particles out of the runoff, settling them in an isolated sump. Hydrocarbons float to the top of the water surface and are prevented from being transported downstream.

Storage Reservoirs and Infiltration Galleries

After pretreatment, water would flow into three underground storage reservoirs installed beneath the existing turf multipurpose fields (the location of the proposed sports fields). The rectangular reservoirs would be formed as a series of precast cells made of reinforced, high-strength concrete. The reservoirs' floors would be permeable concrete to allow captured water to seep into the underlying aquifer and provide natural filtration through the soil.

The largest of the three reservoirs, proposed for the west side of the park (west of the storm drain), would have a capacity of 7.1 acre-feet (2.3 million gallons) and would have an area of approximately 56,300 square feet (1.3 acres). The two smaller reservoirs would be on the eastern side of the park (east of the storm drain), separated by the diversion pipe extending from Algardi Street. One is anticipated to have a capacity of 3.3-acre feet (1.1 million gallons) and an area of 26,200 square feet (0.6 acres), and the other is anticipated to have a capacity of 1.7 acre-feet (554,000 gallons) and an area of 13,300 square feet (0.3 acres). The larger, western reservoir would be connected directly to the diversion pipeline and a discharge pipeline for sending water back into the park storm drain. The other two reservoirs would be connected to the larger reservoir and to each other by 24-inch-diameter equalization pipes, which would allow water to pass between the reservoirs and balance their respective storage volumes.

Construction of the reservoirs would entail removing the field surface and excavating earth material up to approximately 20 feet below ground surface. Material would be placed into dump trucks and hauled off site to a licensed landfill or quarry for reuse or disposal. Excavation volume is estimated at a total of 37,000 cubic yards of

earth, which equates to an estimated 3,100 haul trips. Hauling is anticipated to occur over 13 weeks, with an average of 41 haul trips per day during that period. The full extent of the material haul route or routes would be determined by the contractor and City Public Works Department once a disposal site has been identified, but the local route would follow 162nd Street and then Pioneer Boulevard and/or Norwalk Boulevard to reach SR-91.

Post-Treatment and Discharge System

During smaller storm events, stormwater collected by the system is anticipated to infiltrate into the soils beneath the storage reservoirs and infiltration galleries. To reduce the reservoirs' size and maximize the project's treatment capacity, the system would not be designed to handle all captured storm flows solely through infiltration; during periods of heavy flow, some water would flow out of the basins through a 24-inch diversion pipe. Water from this diversion would flow through a post-treatment filtration device and then discharge back into the storm drain system through a connection south of the inlet diversion pipe. Water flowing back into the storm drain would be cleaner than when originally diverted, having been through pre- and post-treatment filter systems, as well as having been clarified while retained in the reservoirs.

Stormwater Harvesting Unit

The project proposes a stormwater harvesting unit comprising a smaller subsurface basin to capture and detain surface storm flows from within the park. A 2-inch recycled water main would augment the harvesting unit to supply water for park landscape irrigation. The irrigation line would also discharge to the project's western reservoir during heavy storm flows.

2.2.2 Park Rehabilitation Project

The proposed park rehabilitation would replace all existing amenities at Hermosillo Park with improved features that would allow for similar active and passive recreation uses as under existing conditions, but with an enhanced experience for park users. Park rehabilitation features are shown in Figure 4, Proposed Park Improvements, and described below.

Because construction of the stormwater capture project would require room for materials staging, contractor trailers, vehicle access, and maneuvering earthwork equipment within the site, the entire park area is expected to be closed to the public, fenced, and made available only to the contractor during construction. The City anticipates all existing facilities would be demolished and removed from the site, except for the children's play equipment and play surface in the center of the park, which is newer than other park facilities. All existing grass, trees, and landscaping are likely to be removed as part of contractor site preparation. Depending on the contractor's approach to construction, portions of the perimeter walkway and trees along the park perimeter may not require removal, but this MND assumes complete park closure and full removal of all existing features for conservative impact analysis purposes.

Soccer Fields

The project would remove the two existing multi-use grass fields that make up the northwestern and northeastern quadrant of Hermosillo Park and replace them with new field surfaces installed over the proposed stormwater capture reservoirs. The field surfaces would be either new grass or artificial turf, subject to final project design, but for conservative impact analysis this document assumes the fields will be artificial turf, representing a change from existing conditions. The City intends to make the fields available for organized recreational league play, with periods

of open availability to the general public. Each field would accommodate either a single soccer field layout for adult and older youth league play or two smaller fields for younger youth league play. There would be 30-foot-high sports netting installed around the fields to prevent balls from escaping the park. LED field lighting would be installed, with two light stanchions on each side of the two fields, for a total of eight stanchions. Lighting would be directed downward and designed to illuminate the field of play and limit direct visibility from neighboring residences.

Between the fields in the center of the park, the project would install concrete bleacher seating and a paved terrace for group gatherings and game spectators. This area would feature picnic tables, barbecue grills, shade canopies, and trees and other landscaping. A paved, lighted walkway would connect this area to the perimeter path on the north and the other park amenities on the south.

Basketball Courts and Handball Courts

The project would remove the existing outdoor full-court basketball court and replace it with one full-court and one half-court basketball court. The existing four-court handball structure would be replaced with a new three-court structure.

Playground and Splash Pad

The children's playground in the center of the park would be retained. A small corner of the play surface would be reconfigured to accommodate the eastern soccer field. A new splash pad water play area would be constructed south of the playground and east of the community center building, in the location of the existing amphitheater, which would be relocated.

Amphitheater

The amphitheater and outdoor community event space would be replaced by a similar feature and relocated to the existing grass field area east of the existing fountain, which would be demolished and removed.

Community Center Building

The existing community center building would be demolished and reconstructed in the same location, with a larger building and an expanded footprint. The new building would be 8,500 square feet, replacing the existing 3,100-square-foot building. The building would include a multipurpose room for community event rentals and City public programs, a Recreation and Park Services Department staff office space, a new police substation, a storage room, and a restroom. The park office would house one staff member and the police substation would house two staff members. The estimated occupancy of the new building would be 208 people, an increase from the existing building's capacity of 80. A new entry monument would be constructed on the southwest side of the building, adjacent to the expanded parking lot discussed below. A paved outdoor plaza would be constructed on the building's northeast side.

Parking Lot Reconfiguration and Expansion

The existing 19-stall (including one Americans with Disabilities Act [ADA] compliant stall) parking lot on the eastern side of the park's southern boundary would be reconstructed and expanded to the west. The reconfigured parking lot is anticipated to include a total of 154 parking stalls, with 6 of them being ADA-compliant stalls, for a net increase of 135 total stalls. The existing parking lot access driveway from 162nd Street would be maintained, and a second access driveway from 162nd Street would be added. An entry monument would be constructed at the eastern entry

point. New tree wells would be installed within the parking lot and additional landscaping would be provided along the parking lot's southern front with 162nd Street.

Tree Removal and Replacement

Most of the existing trees within the park are likely to be removed, although certain trees along the perimeter may be retained depending on the contractor's work area layout. All trees that are removed would be replaced with new trees, and new landscape would be added, for a net increase in trees and plants within the park and along the park perimeter.

Ancillary Park Improvements

Existing picnic benches, trash receptacles, barbecues, and lighting would be removed and replaced in new configurations. The perimeter walking path would be replaced in place, maintaining the pedestrian access points from the north, west, and east sides. A new irrigation system would be installed throughout the park to support the proposed trees, landscaping, and turf, if natural grass is installed.

2.2.3 Temporary Construction Access, Staging, and Park Closure

Construction access would be provided from the south along 162nd Street. Temporary equipment staging and construction trailers would be established within the existing park boundary, with no additional off-site staging anticipated to be needed. All of Hermosillo Park is expected to be closed to the public for the duration of project construction, which is anticipated to be 2 years.

Construction would also require temporary work in Algardi Street and Horst Avenue, including pavement removal, trench excavation, pipe and vault installation, and pavement resurfacing. Portions of traffic lanes would be closed during construction. All road closure would be performed pursuant to a traffic-control plan prepared by the contractor and approved by the City Engineer. Access to residential driveways would be maintained at all times.

2.3 Construction Phasing and Schedule

Table 2-1 presents the anticipated construction phasing, equipment usage, and duration assumed for the project for purposes of environmental impact analysis in this MND. These assumptions were developed in consultation with the project design engineers for consideration in Section 3.3, Air Quality; Section 3.6, Energy; Section 3.8, Greenhouse Gas Emissions; and Section 3.13, Noise. The total duration of project construction is anticipated to be 24 months, with some phases overlapping. Typical construction work hours would be Monday through Friday, 7:00 a.m. to 7:00 p.m. Night work is not anticipated.

Table 2-1. Anticipated Construction Phasing and Equipment

Construction Phase	Anticipated Equipment	Estimated Duration
Site mobilization, clearing, grubbing, and vegetation removal	Dozer	10 weeks
	Grader	
	Skid steer loader	
	Haul trucks	
Demolition of existing basketball courts, handball courts, community center building, amphitheater, and fountain	Dozer	6 weeks
	Skid steer loader	
	Jack hammer	
	Haul trucks	
Reservoir excavation	Dozer	20 weeks
	Backhoe loaders	
	Skid steer loader	
	Haul trucks	
Reservoir construction	Crane	25 weeks
	Dozer	
	Skid steer loader	
Pipe, diversion structure, and treatment facility/pump installation	Crane	12 weeks
	Trencher	
	Skid steer loader	
	Haul trucks	
Field surface replacement	Grader	6 weeks
	Skid steer loader	
	Turf aerator	
	Spreader sprayer	
Upper terrace and bleacher construction	Crane	8 weeks
	Telehandler	
	Cement mixer	
	Boom lift	
Community center building construction	Crane	12 weeks
	Telehandler	
	Cement mixer	
	Boom lift	
Basketball court, handball court, amphitheater, and splash pad construction	Crane	8 weeks
	Telehandler	
	Cement mixer	
	Boom lift	
Parking lot reconfiguration	Skid steer loader	8 weeks
	Drum roller	
	Dump trucks	
	Compactor	

Table 2-1. Anticipated Construction Phasing and Equipment

Construction Phase	Anticipated Equipment	Estimated Duration
	Asphalt paver	
Concrete pathway improvements	Concrete mixer	4 weeks
Ancillary park improvements	Crane	8 weeks
	Skid steer loader	
	Forklift	
	Cement mixer	

2.4 Project Operation

Once construction is complete, project operation is anticipated to entail routine maintenance performed by the City at the stormwater capture facility and other park features. Reservoir maintenance would entail removal of debris and pollutant constituents from the treatment devices, pump testing and calibration, and cleaning the storage reservoirs.

The new soccer fields and other park improvements are anticipated to support increased use of the park, including use from league soccer games and practices. Public use of the community center would be similar to that of the existing building, but the expanded center would accommodate slightly larger groups. The police substation would also add a new permanent use to the community center building. The expanded parking lot is anticipated to accommodate the increase in park use and activity without causing greater reliance on street parking in the adjacent residential neighborhood.

2.5 Permits and Approvals

The City of Norwalk is the CEQA lead agency, with the Norwalk City Council holding primary responsibility for adopting this MND and approving commencement of project construction. The project will also require the issuance of a building permit by the City for the proposed community center building. Other public agency approvals include the following:

- A Flood Construction Permit issued by the Los Angeles County Flood Control District
- The State Water Resources Control Board (SWRCB) will serve as a responsible agency under CEQA for their approval of a stormwater pollution prevention plan (SWPPP) in compliance with the Construction General Permit.

INTENTIONALLY LEFT BLANK

3 Initial Study Checklist

1. **Project title:**

   Hermosillo Park Stormwater Capture and Park Rehabilitation Project

2. **Lead agency name and address:**

   City of Norwalk,
   12700 Norwalk Boulevard,
   Norwalk, California 90650

3. **Contact person and phone number:**

   Run Chen P.E., PMP
   562.929.5700

4. **Project location:**

   The project is located in the southern portion of the City of Norwalk in southern Los Angeles County. The project site covers the entirety of Hermosillo Park, a recreation facility maintained by the City, located north of 162nd Street, east of Clarkdale Avenue, and west of Horst Avenue.

5. **Project sponsor's name and address:**

   City of Norwalk
   12700 Norwalk Boulevard
   Norwalk, California 90650

6. **General plan designation:**

   Open Space/Schools/Public Facilities

7. **Zoning:**

   R1 (single-family residential)

8. **Description of project. (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off site features necessary for its implementation. Attach additional sheets if necessary):**

   Construction and operation of a stormwater capture, filtration, and infiltration system beneath turf fields in a public park. Replacement and rehabilitation of existing park facilities. Refer to Section 2.2 for additional detail.

9. **Surrounding land uses and setting (Briefly describe the project's surroundings):**

   Residential, school, and light industrial. Refer to Section 2.1 for additional detail.

10. **Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):**

Los Angeles County Flood Control District, SWRCB

11. **Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?**

Refer to Section 3.18, Tribal Cultural Resources.

Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact," as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☒ Air Quality
☒ Biological Resources	☐ Cultural Resources	☐ Energy
☒ Geology and Soils	☐ Greenhouse Gas Emissions	☒ Hazards and Hazardous Materials
☐ Hydrology and Water Quality	☐ Land Use and Planning	☐ Mineral Resources
☐ Noise	☐ Population and Housing	☐ Public Services
☐ Recreation	☐ Transportation	☐ Tribal Cultural Resources
☐ Utilities and Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

Determination (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature Date

Evaluation of Environmental Impacts

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an Environmental Impact Report (EIR) is required.
4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analyses," as described in (5) below, may be cross-referenced).
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
    a. Earlier Analysis Used. Identify and state where they are available for review.
    b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
    c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
    a. The significance criteria or threshold, if any, used to evaluate each question; and
    b. The mitigation measure identified, if any, to reduce the impact to less than significance

3.1 Aesthetics

		Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
I.	**AESTHETICS** – Except as provided in Public Resources Code Section 21099, would the project**:**				
a)	Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

a) Would the project have a substantial adverse effect on a scenic vista?

Less-than-Significant Impact. Scenic vistas generally refer to views of expansive open space areas or other natural features, such as mountains, undeveloped hillsides, large natural water bodies, or coastlines. Certain urban settings or features, such as a striking or renowned skyline, may also represent a scenic vista. Additionally, scenic vistas are views that are accessible from public vantage points, such as public roadways and parks. Vision Norwalk: The City of Norwalk General Plan (General Plan) does not specifically list or identify any designated scenic vistas or specific scenic resources within the City (City of Norwalk 1996). The City is located within a coastal plain bound by the Pacific Ocean to the southwest and mountains around the rest of its perimeter. The City is a completely urbanized community with limited natural resources.

Project construction would result in temporary visual changes to the park, including the presence of excavated areas and staging of construction equipment. Upon completion of construction, these temporary visual changes would cease. The project's stormwater capture infrastructure would be located underground and would not be visible during project operation. Other project components would include replacement of all existing amenities at Hermosillo Park with improved features, as described in Section 2.2.2, Park Rehabilitation Project, which are intended in part as improvements to the visual environment. As such, the project would not result in substantial adverse effects to scenic vistas, and impacts would be less than significant.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. There are no designated state scenic highways in the vicinity of the project site. The nearest eligible scenic highway is a segment of SR-1, located approximately 7.5 miles southwest of the project site (Caltrans 2024). Due to intervening development and distance, the project site is not visible from this segment of SR-1. Therefore, the project would not substantially damage scenic resources within a state scenic highway and no impact would occur.

c) In non-urbanized areas, would the project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

No Impact. Per PRC Section 21071, an "urbanized area" is defined as "(a) An incorporated city that meets either of the following criteria: (1) Has a population of at least 100,000 persons. [or] (2) Has a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons." The project site is located in the incorporated City of Norwalk, which has a population of 102,773 persons as of the 2020 census (U.S. Census Bureau 2020). Therefore, the project site is considered to be located in an urbanized area.

As discussed in Section 3.1(a) above, the project site is not visible from any prominent public viewpoints. Temporary visible elements associated with the project include construction equipment, staging activities, and temporary fencing to be included for safety and security purposes. Visual impacts resulting from construction activities would be temporary, ceasing upon completion of construction.

The project would comply with any applicable zoning or other regulations governing scenic quality. The project site is not subject to overlay zones or other such designations specific to scenic resources or quality. The proposed stormwater capture and filtration facility would be located primarily underground. In addition, the project would include replacement of all existing amenities at Hermosillo Park with improved features, as described in Section 2.2.2, which would enhance the park's visual quality. The project would result in the continued use of the site as a park and would not substantially visually differ from its current use. Implementation of the project would not conflict with the applicable zoning and other regulations governing scenic quality. No impact would occur.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less-than-Significant Impact. The project is located in an urban area with existing sources of nighttime lighting from roadways, residences, and the existing Hermosillo Park. Existing lighting at Hermosillo Park consists of lighting within facilities, including existing lighting at the basketball courts, around the existing community center building, and along pedestrian pathways for safety and security. No nighttime work would occur during construction of the project. New lighting at the soccer fields would consist of LED field lighting, with two light stanchions on each side of the two fields, for a total of eight stanchions. Lighting would be directed downward and designed to illuminate the field of play and limit direct visibility from neighboring residences. Operation of new nighttime lighting would be similar to that of the existing lighting within

Hermosillo Park and would be subject to the same operating hours. The materials that would be used for the project would not be reflective in nature and would not serve as a new source of glare (such as large areas of glass). Therefore, impacts would be less than significant.

3.2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
II. AGRICULTURE AND FORESTRY RESOURCES – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. According to the California Important Farmland Finder database, the project site and its immediate surroundings are classified as "Urban and Built-Up Land" (DOC 2023). The project would not be located on land classified as Farmland pursuant to the Farmland Mapping and Monitoring Program and would therefore not convert any Farmland to non-agricultural use. No impact would occur.

b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The project site is zoned R1 (single-family residential). Surrounding Hermosillo Park are areas also zoned R1 (City of Norwalk 2023). The City does not contain any lands zoned for agricultural use. There are no existing lands under a Williamson Act contract within the City. Therefore, the project would not conflict with existing zoning for agricultural use or a Williamson Act contract. No impact would occur.

c) Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact. The project site and surrounding areas are not zoned for and do not contain any forest land or timberland. Therefore, the project would not conflict with or cause the rezoning or conversion of forest land or timberland. No impact would occur.

d) Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. Refer to Section 3.2(c). No impact would occur.

e) Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. Refer to Sections 3.2(a) through 3.2(d). The project site is located in an urbanized area with no existing agricultural uses, Farmland, or forest lands in the vicinity. The City does not contain any lands zoned for agricultural uses. Therefore, the project would not involve other changes that could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use. No impact would occur.

3.3 Air Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c) Expose sensitive receptors to substantial pollutant concentrations?	☐	☒	☐	☐
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

This section is based on technical analysis conducted by Dudek, including quantitative estimates of air pollutant emissions based on assumptions developed in consultation with the project design engineers. The results of the emissions estimates are provided as Appendix A, Air Quality and Greenhouse Gas Modeling, to this MND.

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

Less-than-Significant Impact. The project site is located within the South Coast Air Basin (SCAB), which includes all of Orange County and the western, non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. The site is within the jurisdictional boundaries of the South Coast Air Quality Management District (SCAQMD).

The SCAQMD administers the SCAB's air quality management plan (AQMP), which is a comprehensive document outlining an air pollution control program for attaining the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). The most recently adopted AQMP for the SCAB is the 2022 AQMP (SCAQMD 2022). The 2022 AQMP provides the regional path towards improving air quality and meeting federal standards for air pollutants. The 2022 AQMP builds upon measures already in place from previous AQMPs. It also includes a variety of additional strategies such as regulation, accelerated deployment of available cleaner technologies (e.g., zero emissions technologies, when cost-effective and feasible, and low oxides of nitrogen [NO_x] technologies in other applications), BMPs, co-benefits from existing programs (e.g., climate and energy efficiency), incentives, and other Clean Air Act measures to achieve the 2015 federal ozone (O_3) standard by 2037 (SCAQMD 2022).

The purpose of a consistency finding with regard to the AQMP is to determine if a project is consistent with the assumptions and objectives of the 2022 AQMP and if it would interfere with the region's ability to comply with federal and state air quality standards. The SCAQMD has established criteria for determining consistency with the currently applicable AQMP in Chapter 12, Sections 12.2 and 12.3, of the SCAQMD CEQA Air Quality Handbook. These criteria are as follows (SCAQMD 1993):

- Consistency Criterion No. 1: Whether the project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the ambient air quality standards or interim emission reductions in the AQMP.
- Consistency Criterion No. 2: Whether the project would exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

To address the first criterion, project-generated criteria air pollutant emissions have been estimated and analyzed for significance and are addressed under Section 3.3(b). Detailed results of this analysis are included in Appendix A. As presented in that analysis and summarized in Section 3.3(b), the proposed project would not generate construction or operational criteria air pollutant emissions that exceed the SCAQMD's thresholds, and the project would therefore be consistent with Criterion No. 1.

The second criterion regarding the potential of the proposed project to exceed the assumptions in the AQMP or increments based on the year of project buildout and phase is primarily assessed by determining consistency between the proposed project's land use designations and its potential to generate population growth. In general, projects are considered consistent with, and not in conflict with or obstructing implementation of, the AQMP if the growth in socioeconomic factors is consistent with the underlying regional plans used to develop the AQMP (SCAQMD 1993). The SCAQMD primarily uses demographic growth forecasts for various socioeconomic categories (e.g., population, housing, and employment by industry) developed by the Southern California Association of Governments (SCAG) for its Regional Transportation Plan (RTP)/Sustainable Communities Strategy (SCS). The most recent RTP/SCS is SCAG's 2020–2045 RTP/SCS (Connect SoCal), which was adopted on September 3, 2020 (SCAG 2020). SCAQMD uses this document, which is based on general plans for cities and counties in the SCAB, for the development of the AQMP emissions inventory (SCAQMD 2022).[2] The SCAG 2020–2045 RTP/SCS, and associated Regional Growth Forecast, are generally consistent with the local plans; therefore, the 2022 AQMP is generally consistent with local government plans.

The project would not change the use of the existing Hermosillo Park. Upon completion, the project would improve Hermosillo Park to further serve the existing and anticipated future demand for recreational uses within the City. The park office would house one staff member and the police substation would house one officer and one support staff member, which would be a minimal increase in employees. Additionally, the project is consistent with underlying land use and zoning designations. Therefore, the project would not directly result in substantial unplanned population growth in the area. Accordingly, the project does not

[2] Information necessary to produce the emission inventory for the SCAB is obtained from the SCAQMD and other governmental agencies, including the California Air Resources Board, the California Department of Transportation, and SCAG. Each of these agencies is responsible for collecting data (e.g., industry growth factors, socioeconomic projections, travel activity levels, emission factors, emission speciation profile, and emissions) and developing methodologies (e.g., model and demographic forecast improvements) required to generate a comprehensive emissions inventory. SCAG incorporates these data into their Travel Demand Model for estimating/projecting vehicle miles traveled and driving speeds. SCAG's socioeconomic and transportation activities projections in their 2020–2045 RTP/SCS are integrated in the 2022 AQMP (SCAQMD 2022).

conflict with the SCAG RTP/SCS forecasts used in the SCAQMD AQMP development and does not propose activities that would induce additional population in the project area. Impacts would be less than significant.

b) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Less-than-Significant Impact. Air pollution is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and the SCAQMD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are used to determine whether a project's individual emissions would have a cumulatively considerable contribution to air quality. If a project's emissions would exceed the SCAQMD significance thresholds, it would be considered to have a cumulatively considerable contribution. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant (SCAQMD 2003).

A quantitative analysis was conducted to determine whether the proposed project might result in emissions of criteria air pollutants that may cause exceedances of the NAAQS or CAAQS, or cumulatively contribute to existing nonattainment of ambient air quality standards. Criteria air pollutants include O_3, nitrogen dioxide (NO_2), carbon monoxide (CO), sulfur dioxide, particulate matter with an aerodynamic diameter less than or equal to 10 microns (PM_{10}), particulate matter with an aerodynamic diameter less than or equal to 2.5 microns ($PM_{2.5}$), and lead. Pollutants that are evaluated herein include volatile organic compounds (VOCs) and NO_x, which are important because they are precursors to O_3, as well as CO, sulfur oxides, PM_{10}, and $PM_{2.5}$.

Regarding NAAQS and CAAQS attainment status,[3] the SCAB is designated as a nonattainment area for national and California O_3 standards and $PM_{2.5}$ standards. The SCAB is designated as a nonattainment area for California PM_{10} standards; however, it is designated as an attainment area for national PM_{10} standards. The SCAB is designated as an attainment area for national and California CO standards, national and California NO_2 standards, and national and California sulfur dioxide standards (EPA 2022; CARB 2022a). Although southern Los Angeles County, where the project is located, has been designated as nonattainment for the federal rolling 3-month average lead standard, it is designated attainment for the state lead standard.[4]

The proposed project would result in emissions of criteria air pollutants for which the California Air Resources Board (CARB) and U.S. Environmental Protection Agency have adopted ambient air quality standards (i.e., the NAAQS and CAAQS). Projects that emit these pollutants have the potential to cause, or contribute to, violations of these standards. SCAQMD has established Air Quality Significance Thresholds, as revised in March 2023, that set forth quantitative emission significance thresholds below which a project would not have a significant impact on ambient air quality (SCAQMD 2023). The quantitative air quality analysis provided herein applies the SCAQMD thresholds identified in Table 3.3-1 to determine the potential for the project to result in a significant impact under CEQA.

[3] An area is designated as in attainment when it is in compliance with the NAAQS and/or the CAAQS. These standards for the maximum level of a given air pollutant that can exist in the outdoor air without unacceptable effects on human health or the public welfare are set by the U.S. Environmental Protection Agency and CARB, respectively. Attainment = meets the standards; attainment/maintenance = achieves the standards after a nonattainment designation; nonattainment = does not meet the standards.

[4] Re-designation of the lead NAAQS designation to attainment for the Los Angeles County portion of the SCAB is expected based on current monitoring data. The phase-out of leaded gasoline started in 1976. Since gasoline no longer contains lead, the project is not anticipated to result in impacts related to lead; therefore, it is not discussed in this analysis.

Table 3.3-1. SCAQMD Air Quality Significance Thresholds

Criteria Pollutants Mass Daily Thresholds		
Pollutant	**Construction (pounds per day)**	**Operation (pounds per day)**
VOCs	75	55
NO_x	100	55
CO	550	550
SO_x	150	150
PM_{10}	150	150
$PM_{2.5}$	55	55
Lead[a]	3	3
Toxic Air Contaminants (TACs) and Odor Thresholds		
TACs[b]	Maximum incremental cancer risk ≥10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥1 in 1 million) Chronic and acute hazard index ≥1.0 (Project increment)	
Odor	Project creates an odor nuisance pursuant to SCAQMD Rule 402	
Ambient Air Quality Standards for Criteria Pollutants[c]		
NO_2 1-hour average NO_2 annual arithmetic mean	SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 0.18 ppm (state) 0.030 ppm (state) and 0.0534 ppm (federal)	
CO 1-hour average CO 8-hour average	SCAQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 20 ppm (state) and 35 ppm (federal) 9.0 ppm (state/federal)	
PM_{10} 24-hour average PM_{10} annual average	10.4 µg/m³ (construction)[d] 2.5 µg/m³ (operation) 1.0 µg/m³	
$PM_{2.5}$ 24-hour average	10.4 µg/m³ (construction)[d] 2.5 µg/m³ (operation)	

Source: SCAQMD 2023.
Notes: SCAQMD = South Coast Air Quality Management District; VOC = volatile organic compounds; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; TAC = toxic air contaminant; NO_2 = nitrogen dioxide; ppm = parts per million by volume; µg/m³ = micrograms per cubic meter.
greenhouse gas emissions thresholds for industrial projects, as added in the March 2015 revision to the SCAQMD Air Quality Significance Thresholds, were not include included in this table as they are addressed within the greenhouse gas emissions analysis and not the air quality analysis.

[a] The phaseout of leaded gasoline started in 1976. Since gasoline no longer contains lead, the project is not anticipated to result in impacts related to lead; therefore, it is not discussed in this analysis.
[b] TACs include carcinogens and noncarcinogens.
[c] Ambient air quality standards for criteria pollutants are based on SCAQMD Rule 1303, Table A-2, unless otherwise stated.
[d] Ambient air quality threshold are based on SCAQMD Rule 403.

A project would result in a cumulatively considerable net increase for O_3, which is a nonattainment pollutant, if the proposed project's construction or operational emissions would exceed the SCAQMD VOC or NO_x thresholds shown in Table 3.3-1. These emission-based thresholds for O_3 precursors are intended to serve as a surrogate for an O_3 significance threshold (i.e., the potential for adverse O_3 impacts to occur)

because O_3 itself is not emitted directly, and the effects of an individual project's emissions of O_3 precursors (i.e., VOCs and NO_x) on O_3 levels in ambient air cannot be determined reliably or meaningfully through air quality models or other quantitative methods.

The California Emissions Estimator Model (CalEEMod) Version 2022.1.1.21 was used to estimate emissions from construction and operation of the project. CalEEMod is a statewide computer model developed in cooperation with air districts throughout the state to quantify criteria air pollutant emissions associated with construction and operational activities from a variety of land use projects, including recreational development. The following discussion summarizes the quantitative project-generated construction and operational emissions and impacts that would result from implementation of the proposed project.

Construction Emissions

Construction of the proposed project would include demolition, site preparation, grading, trenching, reservoir and building construction, landscaping, paving, and application of architectural coatings. These construction activities would result in the temporary addition of pollutants to the local airshed caused by on-site sources (e.g., off-road construction equipment, soil disturbance, and VOC off-gassing from architectural coatings and asphalt pavement application) and off-site sources (e.g., vendor trucks, haul trucks, and worker vehicle trips). Specifically, entrained dust results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil, resulting in PM_{10} and $PM_{2.5}$ emissions. Internal combustion engines used by construction equipment, haul trucks, vendor trucks (i.e., delivery trucks), and worker vehicles would result in emissions of VOC, NO_x, CO, PM_{10}, and $PM_{2.5}$. Application of architectural coatings, such as exterior paint and other finishes, and application of asphalt pavement would also produce VOC emissions. Construction emissions can vary substantially from day to day depending on the level of activity; the specific type of operation; and, for dust, the prevailing weather conditions.

Proposed project construction emissions were estimated using a combination of CalEEMod default assumptions and information provided by the City. It was assumed that approximately 37,000 cubic yards of soil would be exported during project earthwork. In addition, demolition of the existing community center, fountain, basketball/handball courts, sidewalks, and parking lot was estimated to result in approximately 1,365 tons of material that would be hauled off site. Air quality emissions modeling assumed that construction of the project would commence in August 2024 and would last approximately 24 months. Default values for horsepower and load factor provided in CalEEMod were used for all construction equipment, and the equipment mix was provided by the City. For the analysis, it was generally assumed that heavy-duty construction equipment would be operating at the site 5 days per week, up to a maximum of 8 hours per day.

Emissions generated during construction and operation of the project are subject to the rules and regulations of the SCAQMD. Rule 403, Fugitive Dust,[5] requires the implementation of measures to control the emission of

[5] SCAQMD Rule 403 requires implementation of various best available fugitive dust control measures for different sources for all construction activity sources within its jurisdictional boundaries. Dust control measures include, but are not limited to, maintaining stability of soil through pre-watering of site prior to clearing, grubbing, cut and fill, and earth-moving activities; stabilizing soil during and immediately after clearing, grubbing, cut and fill, and other earth-moving activities; stabilizing backfill during handling and at completion of activity; and pre-watering material prior to truck loading and ensuring that freeboard exceeds 6 inches. Although SCAQMD Rule 403 requires fugitive dust control beyond watering control measures, compliance with Rule 403 is represented in CalEEMod by assuming twice daily watering of active sites (55% reduction in PM_{10} and $PM_{2.5}$ [CAPCOA 2022]).

visible fugitive/nuisance dust, such as wetting soils that would be disturbed. It was assumed that the active sites would be watered at least two times daily, resulting in an approximately 61% reduction of fugitive dust (CalEEMod default value), to represent compliance with SCAQMD standard dust control measures in Rule 403.

CalEEMod calculates maximum daily emissions for summer and winter periods. As such, the estimated maximum daily construction emissions without mitigation for both summer and winter periods are summarized in Table 3.3-2. Detailed construction model outputs are presented in Appendix A.

Table 3.3-2. Estimated Maximum Daily Construction Criteria Air Pollutant Emissions - Unmitigated

Year	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Pounds per Day					
Summer						
2024	3.73	36.19	34.36	0.05	9.54	5.48
2025	3.41	32.07	31.78	0.06	7.66	4.05
2026	6.92	11.85	12.76	0.03	0.67	0.43
Winter						
2024	3.73	36.21	34.15	0.06	9.54	5.48
2025	3.41	32.10	31.57	0.06	7.66	4.05
2026	6.92	11.86	12.65	0.03	0.61	0.43
Maximum Daily Emissions	**6.92**	**36.21**	**34.36**	**0.06**	**9.54**	**5.48**
SCAQMD Threshold	*75*	*100*	*550*	*150*	*150*	*55*
Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; SCAQMD= South Coast Air Quality Management District
Emissions estimates include watering of the active sites two times per day per Rule 403 compliance.

As shown in Table 3.3-2, the proposed project's maximum daily construction emissions would not exceed SCAQMD thresholds for any criteria pollutant and impacts would be less than significant.

Operational Emissions

The first full year of project operations would be 2027. Operational emissions associated with the existing park in year 2024 were also estimated. During long-term operations, the project would generate air pollutants from mobile, energy (natural gas combustion), and area (consumer products, architectural coatings, landscaping equipment) sources. CalEEMod was used to estimate emissions from all these sources. Table 3.3-3 summarizes the maximum daily emissions of criteria pollutants that would be generated by operation of the proposed project, as well as emissions from the existing park facilities, and compares the net change in emissions from existing to proposed conditions to the SCAQMD's operational thresholds.

Table 3.3-3. Estimated Maximum Daily Operational Criteria Air Pollutant Emissions - Unmitigated

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter; SCAQMD= South Coast Air Quality Management District

As shown in Table 3.3-3, the proposed project's net increase in operational emissions would not exceed SCAQMD thresholds for any criteria pollutant and impacts would be less than significant.

Cumulative

Cumulative localized impacts would potentially occur if a project were to occur concurrently with another off-site project. Schedules for potential future projects near the project area are currently unknown; therefore, potential impacts associated with two or more simultaneous projects would be considered speculative.[6] However, the project is located in an already developed urban area and any future projects would be subject to CEQA and would require air quality analysis and, where necessary, mitigation. Criteria air pollutant emissions associated with construction activity of future projects would be reduced through implementation of control measures required by the SCAQMD. Cumulative PM_{10} and $PM_{2.5}$ emissions would be reduced because all future projects would be subject to SCAQMD Rule 403, Fugitive Dust, which sets forth general and specific requirements for all sites in the SCAQMD.

Therefore, the proposed project would not result in a cumulatively considerable increase in emissions of nonattainment pollutants and impacts would be less than significant during construction and operation.

6 The CEQA Guidelines state that if a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact (14 CCR 15145).

c) Would the project expose sensitive receptors to substantial pollutant concentrations?

Less-than-Significant Impact with Mitigation Incorporated. Sensitive receptors are those individuals more susceptible to the effects of air pollution than the population at large. People most likely to be affected by air pollution include children, the elderly, and people with cardiovascular and chronic respiratory diseases. According to SCAQMD, sensitive receptors include residences, schools, playgrounds, childcare centers, long-term healthcare facilities, rehabilitation centers, convalescent centers, and retirement homes (SCAQMD 1993).

The closest off-site sensitive receptors to the project site are single-family residences located adjacent to the project boundary in all directions and Sanchez Elementary School, which is located about 150 feet southwest of the project site.

Localized Significance Thresholds

The SCAQMD recommends a localized significance threshold (LST) analysis to evaluate the potential of localized air quality impacts to sensitive receptors in the immediate vicinity of a proposed project from construction and operation; however, an operational LST analysis is not required for the project due to there being no substantial on-site sources of localized emissions. For projects that disturb 5 acres or less per day, the SCAQMD Final Localized Significance Threshold Methodology (SCAQMD 2008a) includes lookup tables that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance criteria (i.e., the emissions would not cause an exceedance of the applicable concentration limits for NO_2, CO, PM_{10}, and $PM_{2.5}$) without performing project-specific dispersion modeling.

The LST significance thresholds for NO_2 and CO represent the allowable increase in concentrations above background levels in the vicinity of a project that would not cause or contribute to an exceedance of the relevant ambient air quality standards, while the threshold for PM_{10} represents compliance with Rule 403 (Fugitive Dust). The LST for $PM_{2.5}$ is intended to ensure that construction emissions do not contribute substantially to existing exceedances of the $PM_{2.5}$ ambient air quality standards. The allowable emission rates depend on the following parameters:

1. Source-Receptor Area (SRA) in which the project is located
2. Size of the project site
3. Distance between the project site and the nearest sensitive receptor (e.g., residences, schools, hospitals)

The proposed project site is located in SRA 5 (Southeast Los Angeles County). The maximum number of acres disturbed on the peak day was estimated using the Fact Sheet for Applying CalEEMod to Localized Significance Thresholds (SCAQMD n.d.), which provides estimated acres per 8-hour per day per piece of earth-moving equipment. Based on the SCAQMD guidance, it was estimated that the maximum acres on the project site that would be disturbed by off-road equipment would be 1.5 acres per day; therefore, LSTs for a 1.5-acre disturbed area were interpolated from the SCAQMD 1- and 2-acre LSTs. The nearest sensitive-receptor land use is located adjacent to the project site. Accordingly, the distance in the LST look-up table of 25 meters is assumed.

According to the Final Localized Significance Threshold Methodology, "off-site mobile emissions from the project should not be included in the emissions compared to the LSTs" (SCAQMD 2008a). Trucks and worker trips associated with the project are not expected to cause substantial air quality impacts to sensitive receptors along off-site roadways since emissions would be relatively brief in nature and would cease once the vehicles pass through the main streets. Nonetheless, because the project site is relatively large, vehicle activity may occur within the project boundary (i.e., fence line); therefore, a small portion (i.e., 0.25 miles) of the off-site vehicle travel for worker vehicles, vendor trucks, and haul trucks was conservatively assumed as on-site emissions for the LST analysis.

The maximum daily on-site emissions generated from construction of the proposed project are presented in Table 3.3-4 and are compared to the SCAQMD localized significance criteria for SRA 5 to determine whether project-generated on-site emissions would result in potential LST impacts.

Table 3.3-4. Construction Localized Significance Thresholds Analysis - Unmitigated

Year	NO_x	CO	PM_{10}	$PM_{2.5}$
	Pounds per Day			
2024	36.01	33.15	9.27	5.41
2025	31.62	30.47	6.48	3.71
2026	11.72	12.06	0.42	0.39
Maximum Daily Emissions	**36.01**	**33.15**	**9.27**	**5.41**
SCAQMD LSTs[a]	*97*	*716*	*5.5*	*3.5*
Threshold exceeded?	**No**	**No**	**Yes**	**Yes**

Source: Appendix A.
Notes: NO_x = oxides of nitrogen; CO = carbon monoxide; PM_{10} = particulate matter with a diameter less than or equal to 10 microns; $PM_{2.5}$ = particulate matter with a diameter less than or equal to 2.5 microns; SCAQMD = South Coast Air Quality Management District; LST = localized significance threshold.
The values shown are the maximum summer or winter daily emissions results from CalEEMod. Emissions estimates include watering of the active sites two times per day per Rule 403 compliance.
The total values may not add up exactly due to rounding.
[a] LSTs are shown for a 1.5-acre disturbed area for a sensitive receptor distance of 25 meters in SRA 5 (Southeast Los Angeles County).

As shown in Table 3.3-4, proposed construction activities would generate emissions in excess of site-specific LSTs for PM_{10} and $PM_{2.5}$ without mitigation, resulting in a potentially significant impact. Mitigation Measure (MM) AQ-1 and MM-AQ-2, which require additional site watering and minimum construction equipment emissions standards, would be incorporated into project construction. The maximum daily on-site emissions generated from construction of the proposed project including MM-AQ-1 and MM-AQ-2 are presented in Table 3.3-5 and are compared to the SCAQMD localized significance criteria for SRA 5 to determine whether project-generated on-site emissions would result in potential LST impacts.

Table 3.3-5. Construction Localized Significance Thresholds Analysis - Mitigated

Construction Year	NO_x	CO	PM_{10}	$PM_{2.5}$
	Pounds per Day			
2024	15.00	28.53	5.21	2.73
2025	17.67	32.42	3.69	1.90
2026	9.55	15.74	0.12	0.11
Maximum Daily Emissions	**17.67**	**32.42**	**5.21**	**2.73**

Table 3.3-5. Construction Localized Significance Thresholds Analysis - Mitigated

Construction Year	NO_x	CO	PM_{10}	$PM_{2.5}$
	Pounds per Day			
SCAQMD LST Criteria[a]	*97*	*716*	*5.5*	*3.5*
Threshold exceeded?	No	No	No	No

Source: Appendix A.
Notes: NO_x = oxides of nitrogen; CO = carbon monoxide; PM_{10} = particulate matter with a diameter less than or equal to 10 microns; $PM_{2.5}$ = particulate matter with a diameter less than or equal to 2.5 microns; SCAQMD = South Coast Air Quality Management District; LST = localized significance threshold.
The values shown are the maximum summer or winter daily emissions results from CalEEMod.
The total values may not add up exactly due to rounding.
Includes application of MM-AQ-1 and MM-AQ-2.
[a] LSTs are shown for a 1.5-acre disturbed area for a sensitive receptor distance of 25 meters in SRA 5 (Southeast Los Angeles County).

As shown in Table 3.3-5, with implementation of MM-AQ-1 and MM-AQ-2, localized criteria air pollutant emissions impacts would be less than significant.

CO Hotspots

Traffic-congested roadways and intersections have the potential to generate localized high levels of CO. Localized areas where ambient concentrations exceed federal and/or state standards for CO are termed CO "hotspots." CO transport is extremely limited and disperses rapidly with distance from the source. Under certain extreme meteorological conditions, however, CO concentrations near a congested roadway or intersection may reach unhealthy levels affecting sensitive receptors. Typically, high CO concentrations are associated with severely congested intersections operating at an unacceptable level of service (level of service E or worse is unacceptable). Projects contributing to adverse traffic impacts may result in the formation of a CO hotspot. Additional analysis of CO hotspot impacts would be conducted if a project would result in a significant impact or contribute to an adverse traffic impact at a signalized intersection that would potentially subject sensitive receptors to CO hotspots.

Title 40 of the Code of Federal Regulations, Section 93.123(c)(5), Procedures for Determining Localized CO, PM_{10}, and $PM_{2.5}$ Concentrations (Hot-Spot Analysis), states that "CO, PM_{10}, and $PM_{2.5}$ hot-spot analyses are not required to consider construction-related activities, which cause temporary increases in emissions. Each site which is affected by construction-related activities shall be considered separately, using established 'Guideline' methods. Temporary increases are defined as those which occur only during the construction phase and last five years or less at any individual site" (40 CFR 93.123). While project construction would involve on-road vehicle trips from trucks and workers during construction, construction activities would last approximately 24 months and would not require a project-level construction hotspot analysis.

Regarding operations, given the minimal increase in daily trips, project-related mobile emissions are not expected to contribute significantly to CO concentrations, and a CO hotspot is not anticipated to occur. In addition, due to continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SCAB is steadily decreasing. The project would result in a less-than-significant impact to air quality with regard to potential CO hotspots.

Toxic Air Contaminants

The greatest potential for toxic air contaminant (TAC) emissions during project construction would be diesel particulate matter (DPM) emissions from heavy equipment operations and heavy-duty trucks. Use of heavy-duty construction equipment is subject to a CARB Airborne Toxics Control Measure for in-use diesel construction equipment to reduce diesel particulate emissions; use of diesel trucks is also subject to an Airborne Toxics Control Measure. Based on the adjacent residential and school receptors, a quantitative health risk assessment (HRA) was prepared for the project. The following discussion summarizes the dispersion modeling, HRA methodology, and results for the proposed project; supporting HRA documentation, including detailed assumptions, is presented in Appendix A.

As described previously, the SCAQMD has adopted a cancer risk threshold of 10 in a million (SCAQMD 2023), which indicates that a person has an additional risk of 10 chances in a million (0.001%) of developing cancer during their lifetime as a result of the air pollution scenario being evaluated. The SCAQMD has also adopted a hazard index less than 1.0, a result below which indicates that people are not likely to experience any non-cancer health effects (SCAQMD 2023).

The SCAQMD's Modeling Guidance for American Meteorological Society/Environmental Protection Agency Regulatory Model (AERMOD) (SCAQMD 2024) provides guidance to perform dispersion modeling for use in HRAs within the SCAB. The cancer risk parameters for exposure to TACs, such as age-sensitivity factors, daily breathing rates, exposure period, fraction of time at home, and cancer potency factors used in the analysis herein are based on the values and data recommended by the Office of Environmental Health Hazard Assessment (OEHHA) Air Toxics Hot Spots Program Risk Assessment Guidelines Guidance Manual for Preparation of Health Risk Assessments 2015 (OEHHA 2015), as implemented in the Hotspots Analysis and Reporting Program Version 2 (HARP2). Accordingly, this HRA evaluates and reflects conservative, health-protective methodologies to assess health impacts to adults, as well as infants, children, and other sensitive subpopulations.

For risk assessment purposes, PM_{10} in diesel exhaust is considered DPM, originating mainly from off-road equipment operating at a defined location for a given length of time at a given distance from sensitive receptors. Less-intensive, more-dispersed emissions result from on road vehicle exhaust (e.g., heavy-duty diesel trucks).

Air dispersion modeling was performed using AERMOD Version 23132 modeling system (computer software) with the Lakes Environmental Software implementation/user interface, AERMOD View Version 12.0. The dispersion modeling included the use of standard regulatory default options. AERMOD parameters were selected as representative of the project site and project activities. Principal parameters of this modeling are presented in **Error! Reference source not found.**.

Table 0-6. American Meteorological Society/Environmental Protection Agency Regulatory Model Principal Parameters

Parameter	Details
Meteorological Data	The latest 5-year meteorological data for the Fullerton Station (KFUL) from SCAQMD were downloaded, then input to AERMOD.
Urban versus Rural Option	Urban areas typically have more surface roughness, as well as structures and low-albedo surfaces that absorb more sunlight—and thus more heat—relative to rural areas. According to SCAQMD guidelines, the urban dispersion option was selected.

Table 0-6. American Meteorological Society/Environmental Protection Agency Regulatory Model Principal Parameters

Parameter	Details
Terrain Characteristics	Digital elevation data were imported into AERMOD and elevations were assigned to receptors and emission sources, as necessary. Digital elevation data were obtained through the AERMOD View in the U.S. Geological Survey's National Elevation Dataset format with a resolution of 1 arc-second resolution.
Source Release Characterizations	The following modeling parameters for emissions sources were incorporated into AERMOD. These parameters were obtained from information published by regulatory agencies and represent the best available information at the time of this writing. Construction: ▪ Off-road equipment and trucks were modeled as a line of adjacent volume sources across the project site with a release height of 5 meters, a plume height of 10 meters, and plume width of 10 meters (SCAQMD 2008a).
Receptors	A uniform fine 800-meter by 800-meter Cartesian grid with 20-meter spacing was centered on the project site and used to capture the maximum point of impacts.

Source: SCAQMD 2008a, 2024.
Notes: SCAQMD = South Coast Air Quality Management District; AERMOD = American Meteorological Society/Environmental Protection Agency Regulatory Model.
See Appendix A for complete model parameter inputs.

The health risk calculations presented herein were performed using the HARP2 Air Dispersion and Risk Tool (ADMRT, Version 22118). The exposure parameters included in HARP2 are described below:

- Maximally Exposed Individual Resident: For residential receptors during project construction and operation, TAC exposure was assumed to begin in the 3rd trimester of pregnancy (assumed to be the worst-case scenario for cancer risk) for a duration of 2 years (construction).
- School: For school children at Sanchez Elementary during project construction, TAC exposure was assumed to begin at 4 years old for a duration of 2 years (construction).

Results of the construction HRA without mitigation are presented in Table 3.3-7.

Table 3.3-7. Construction Health Risk Assessment Results – Unmitigated

Impact Parameter	Units	Project Impact	CEQA Threshold	Level of Significance
Cancer Risk – MEIR	Per Million	4.81	10	Less than Significant
Chronic Hazard Index – MEIR	Index Value	0.0028	1.0	Less than Significant
Cancer Risk – School	Per Million	0.28	10	Less than Significant
Chronic Hazard Index – School	Index Value	0.0010	1.0	Less than Significant

Source: Appendix A.
Note: MEIR = Maximally Exposed Individual Resident.

As shown in Table 3.3-7, the results of the construction HRA for the project demonstrate that the unmitigated construction DPM emissions would result in a potential maximum cancer risk at the Maximally Exposed Individual Resident and school that would be below the applicable SCAQMD thresholds. In addition, MM-AQ-2, which requires the use of Tier 4 engines for equipment greater than 75 horsepower, would

substantially reduce DPM emissions (by approximately 84%) and associated risk from implementation of stringent off-road equipment exhaust controls.

Health Effects of Criteria Pollutants

Short-term project construction would not exceed the significance thresholds for any criteria air pollutants after implementation of mitigation measures. Long-term project operations would not exceed any significance thresholds without mitigation.

VOCs and NO_x are precursors to O_3, for which the SCAB is designated as nonattainment with respect to the NAAQS and CAAQS. The health effects associated with O_3 are generally associated with reduced lung function. The contribution of reactive organic gases and NO_x to regional ambient O_3 concentrations is the result of complex photochemistry. The increases in O_3 concentrations in the SCAB due to O_3 precursor emissions tend to be found downwind from the source location to allow time for the photochemical reactions to occur. However, the potential for exacerbating excessive O_3 concentrations would also depend on the time of year that the VOC emissions would occur because exceedances of the O_3 CAAQS/NAAQS tend to occur between April and October when solar radiation is highest. The holistic effect of a single project's emissions of O_3 precursors is speculative due to the lack of quantitative methods to assess this impact. However, the project would not exceed the significance thresholds for VOC or NO_x; therefore, implementation of the project would contribute minimally to regional O_3 concentrations and the associated health effects.

Health effects that result from NO_2 and NO_x include respiratory irritation, which could be experienced by nearby receptors during the periods of heaviest use of off-road construction equipment. However, because project generated NO_x emissions would not exceed the significance threshold during construction or operations, the project would not result in potential health effects associated with NO_2 and NO_x.

CO tends to be a localized impact associated with congested intersections. The associated potential for CO hotspots were discussed previously and are determined to be a less-than-significant impact. Thus, the project's CO emissions would not contribute to significant health effects associated with this pollutant.

With mitigation, construction of the project would not exceed the LSTs for PM_{10} or $PM_{2.5}$ and would not contribute to exceedances of the NAAQS and CAAQS for particulate matter or obstruct the SCAB from coming into attainment for these pollutants. Due to the minimal contribution of particulate matter during construction and operation, the project is not anticipated to result in health effects associated with PM_{10} or $PM_{2.5}$.

In summary, because implementation of the project would not result in exceedances of the SCAQMD significance thresholds during construction and operation, the potential health effects associated with criteria air pollutants are considered less than significant with mitigation.

MM-AQ-1 Fugitive Dust Controls During Construction. The City shall water exposed soil during construction three times daily. The City shall also replace ground cover of disturbed areas during construction as expeditiously as feasible.

MM-AQ-2 Require Use of Tier 4 Off-Road Equipment During Construction. Prior to the commencement of construction activities for the project, the City shall require its construction contractor to demonstrate that all 75-horsepower or greater diesel-powered equipment is powered with California Air Resources Board–certified Tier 4 engines.

An exemption from this requirement may be granted if (1) the City documents that equipment with Tier 4 engines is not reasonably available and (2) the required corresponding reductions in criteria air pollutant emissions can be achieved for the project from other combinations of construction equipment. Before an exemption may be granted, the City's construction contractor shall (1) demonstrate that at least two construction fleet owners/operators in the County of Los Angeles were contacted and that those owners/operators confirmed Tier 4 equipment could not be located within the County of Los Angeles during the desired construction schedule and (2) the proposed replacement equipment has been evaluated using California Emissions Estimator Model or other industry standard emission estimation method and documentation provided to the City to confirm that necessary project-generated emissions reductions are achieved.

d) Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less-than-Significant Impact. Based on available information, the project is not anticipated to result in other emissions that have not been addressed under Section 3.3(a) through Section 3.3(c). As such, this analysis focuses on the potential for the project to generate odors.

The analysis of other emissions is focused on the potential for an odor impact to occur. The occurrence and severity of potential odor impacts depends on numerous factors. The nature, frequency, and intensity of the source; the wind speeds and direction; and the sensitivity of the receiving location each contribute to the intensity of the impact. Although offensive odors seldom cause physical harm, they can be annoying and cause distress among the public and generate citizen complaints.

Odors would be generated from vehicles and/or equipment exhaust emissions during construction of the project. Odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment, architectural coatings, and asphalt pavement application. Such odors would disperse rapidly from the project site and generally occur at magnitudes that would not affect substantial numbers of people. Therefore, impacts associated with odors during construction would be considered less than significant.

Land uses and industrial operations associated with odor complaints include agricultural uses, wastewater treatment plants, food-processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities (SCAQMD 1993). The project does not propose and would not engage in any of these activities or other potential activities that would generate operational odors. The project entails the rehabilitation of an existing park and would not create any new sources of odors during operation. Therefore, the project would result in an odor impact that is less than significant.

3.4 Biological Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES – Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☒	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Rincon Consultants Inc. prepared a Biological Resources Due Diligence Report for the project, included as Appendix B to this MND. A literature review and field survey were conducted to document the site conditions and determine the potential for special-status species to be present. The study area encompasses the entirety of Hermosillo Park.

Literature Review

The following data sources were reviewed by Rincon in preparation of Appendix B. See Appendix B for full source information.

- California Department of Fish and Wildlife (CDFW) California Natural Diversity Database
- CDFW State and Federally listed Endangered, Threatened, and Rare Plants of California
- CDFW California Natural Diversity Database Biogeographic Information and Observation System
- California Native Plant Society's Inventory of Rare and Endangered Plants
- Google Earth Pro
- U.S. Department of Agriculture Natural Resources Conservation Service
- U.S. Fish and Wildlife Service (USFWS) Critical Habitat Portal
- USFWS Information for Planning and Conservation
- USFWS National Wetlands Inventory
- U.S. Geological Survey

Field Survey

Rincon Consultants Inc. performed a field survey on November 8, 2023. The biological survey was limited to assessing the vegetation and overall conditions of the project site for potentially supporting sensitive biological resources, including special-status plant and wildlife species, sensitive plant communities, jurisdictional waters and wetlands, protected trees, and habitat for nesting birds.

a) ***Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?***

No Impact. Six special-status plant species and 17 special-status wildlife species were listed in the California Natural Diversity Database as occurring within a nine-quadrangle search area (i.e., U.S. Geological Survey 7.5-minute quadrangles). Based on the developed conditions on site, no special-status plant and wildlife species are expected to occur. Special-status plant species have specialized habitat requirements, including plant community types, soils, and other components absent from the study area. Special-status wildlife species typically have specific habitat requirements that include vegetation communities, elevations, topography, and availability of primary constituent elements (i.e., space for individual and population growth, breeding, foraging, and shelter). These habitat requirements do not occur within the study area. As such, special-status plant and animal species are not expected to occur within or immediately adjacent to the study area. Therefore, any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS, is not expected to occur due to the lack of suitable habitat. No impact would occur.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No Impact. Potentially jurisdictional surface waters and wetlands were not observed within the study area. The study area predominantly supports ornamental land cover and does not contain naturally occurring vegetation. The study area does not contain any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by CDFW or USFWS. No impact to these biological resources would occur as a result of the projects.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. Refer to Section 3.4(b). The study area does not contain any state or federally protected wetlands; no impact to these resources would occur as a result of the project.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less-than-Significant Impact with Mitigation Incorporated. Hermosillo Park is currently developed and is surrounded by urbanization. The study area is not located within or near a wildlife movement corridor. The study area contains suitable nesting habitat for numerous native bird species, which could nest in trees and shrubs during the nesting season (generally February 1 through August 31). Native bird species are protected pursuant to the California Fish and Game Code and federal Migratory Bird Treaty Act. Given the presence of shrubs and trees on and adjacent to the project site, it is probable nesting birds will be present during the nesting season. Project construction during the nesting season could impact nesting birds.

Project implementation of MM-BIO-1 (nesting bird avoidance) would reduce these potential indirect impacts to nesting birds to a less-than-significant level.

MM-BIO-1 Nesting Bird Avoidance. If project activities must begin during the breeding season (February 1–August 31), then a pre-construction nesting bird survey should be conducted no more than 7 days prior to initiation of ground disturbance and sediment removal activities. The nesting bird pre-construction survey should be conducted on foot inside the project site, including a 100-foot buffer (300-foot for raptors), and in inaccessible areas (e.g., private lands) from afar using binoculars to the extent practical. The survey should be conducted by a biologist familiar with the identification of avian species known to occur in Southern California communities. If nests are found, an avoidance buffer (dependent upon the species, the proposed work activity, and existing disturbances associated with land uses outside of the site) should be determined and demarcated by the biologist with bright orange construction fencing, flagging, construction lathe, or other means to mark the boundary. All construction personnel should be notified of the existence of the buffer zone and to avoid entering the buffer zone during the nesting season. No ground-disturbing or vegetation removal activities should occur inside this buffer until the avian biologist has confirmed that

breeding/nesting is completed and the young have fledged the nest. Encroachment into the buffer should occur only at the discretion of the qualified biologist.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact. Most of the existing trees within the park are likely to be removed. All trees that are removed would be replaced with new trees, and new landscape would be added, for a net increase in trees and plants within the park and along the park perimeter. However, as the City does not have a tree protection ordinance, there are no locally protected trees within the study area (Appendix B). Therefore, there is no conflict with any local policies or ordinances protecting biological resources, and no impact would occur.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. There are no local, regional, or state habitat conservation plan areas in the vicinity (Appendix B). As such, the project would not conflict with the provisions of an adopted conservation plan, and no impact would occur.

3.5 Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☐	☒	☐
c) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

This section is based on the results of archival research, including a search of the California Historical Resources Information System (CHRIS) database, and a pedestrian survey conducted by Dudek.

Archival Research

There are 24 historic aerial photographs (1953–2020) and 26 historic topographic maps (1896–2021) depicting the project site available online, and these were reviewed as part of the archival research conducted in support of the project (NETR 2024). The 1953 aerial photograph shows gridded areas located within the northwest portion of the project site. These features are likely associated with the project site's past agricultural uses. The remaining sections of the project site depicted in the 1953 historic aerial appear to be graded and undeveloped. Additionally, in 1953, three structures are present to the north of the project site, with a portion of one structure extending into

the northern section of the project site. In the 1972 aerial photograph, the project site exhibits indications of ground disturbance as evidenced by grading scars. The gridded areas in the northwest portion of the project site are now identified as cattle barriers. On the 1988 aerial photograph, the project site is depicted as the presently known Hermosillo Park, including its parking lot, a building located towards the south end of the park, trails, and Algardi Street, though the northern section of Algardi Street/the paved walking path is not yet depicted within the project site. Landscaped grass is present within the majority of the project site, along with trees scattered throughout park. No substantial changes are observed within the project site on the 1991 to 2016 aerial photographs. On the 2018 aerial photograph, the northern section of Algardi Street/the paved walking path is now observed within the project site. A review of the historic aerial photographs reveal that the project site has undergone some ground disturbing activities from its past use as an agricultural/ranching area, and its transition into a park in the 1980s. Three historic-age structures once existed to the north of the project site but are no longer extant. There is evidence to indicate that one potentially historic-era (constructed sometime between 1972 and 1988) structure remains extant within the project site, located within the southern central portion of Hermosillo Park.

In the 1896 to 1924 historic topographic (topo) maps, a structure is observed directly to the north of the project site. The structure is no longer observed on the 1925 topo map; however, two structures are observed in the southern section of the project site. An informal road intersects the project site near the center, oriented on a north to south axis, and terminates at the two structures. An additional informal road runs parallel to the southern boundary of the project site, extending east to west and terminates near the two structures. These informal roads are no longer depicted after the 1932 topo map. On the 1942 topo map, the two structures are no longer observed within the southern portion of project site. The depiction of the project site in the historic topographic maps remains largely unchanged until 1982. By 1982, there is a single structure depicted in the southern central portion of the project site. This structure appears to remain extant through the last available topographic map from 2020. Overall, a review of the historic topo maps identified the presence of two historic-age structures that once existed within the southern portion of the project site (circa 1925). Although there is evidence to indicate that these structures are no longer extant, one potentially historic-era structure (constructed sometime between 1975 and 1982) likely remains within the southern central portion of the project site.

A records search of the CHRIS database held at the South Central Coastal Information Center (SCCIC) for the project site was conducted on January 2, 2024. The records search identified five previously conducted cultural resources studies within 0.5 miles of the project site. These studies were conducted between 1997 and 2013 (Table 3.5-1). Of these studies, none address or intersect with the project site. The CHRIS records search indicates that no cultural resources have been previously recorded within the project site nor within 0.5 miles of the project site.

Native American Heritage Commission Sacred Lands File Search

Dudek contacted the Native American Heritage Commission (NAHC) on December 19, 2023, and requested a review of their Sacred Lands File (SLF) for the project site and a 0.5-mile radius. The SLF consists of a database of known Native American cultural resources. These resources may not be included in the CHRIS database. The NAHC replied via email on January 31, 2024, stating that the SLF search was completed with negative results. The NAHC additionally provided a list of 13 Native American individuals and/or tribal organizations that should be contacted for more information on potential tribal sensitivities regarding the project.

Pedestrian Survey

Dudek conducted an intensive-level archaeological resources and built environment resources pedestrian survey of the project site on January 25, 2024. The pedestrian survey employed standard archaeological and built environment procedures and techniques consistent with the Secretary of the Interior's Standards for a cultural resources inventory. The archaeological resource pedestrian survey was conducted in 15-meter intervals, oriented north to south. Where visible, the ground surface was examined for prehistoric artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools, ceramics, fire-affected rock), soil discoloration that might indicate the presence of a cultural midden, soil depressions, features indicative of the current or former presence of structures or buildings (e.g., standing exterior walls, post holes, foundations), and historic artifacts (e.g., metal, glass, ceramics, building materials).

The built environment pedestrian survey entailed recordation and photo documentation of all historic-era resources within the project site that are 45 years of age or older. All historic-era roadways, structures, and landscape features were documented with notes and photographs. Special attention was given to noting any character-defining features, spatial relationships, observed alterations, and historic landscape features.

The project site is a well-maintained public park. The project site is bounded by residential development to the west, north, and east and by a school and 162nd Street to the south. The project site is developed with several park-related structures including a playground, basketball and handball courts, an amphitheater, and several concrete picnic tables. An approximately 7-foot-tall cinder block wall and a paved walking path are located around the western, northern, and eastern borders of the project site. A parking lot and concrete block building constructed circa 1978 are located in the southern central section of the project site. Vegetation within the project site primarily

consists of well-manicured grass, along with sycamore, pine, and oak trees. The pedestrian survey did not identify any archaeological resources within the project site.

A) Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

No Impact. As defined by the CEQA Guidelines (14 CCR 15000 et seq.), a "historical resource" is considered to be a resource that is listed in or eligible for listing in the National Register of Historic Places or Califiornia Register of Historical Resources (CRHR), has been identified as significant in a historical resource survey, or is listed on a local register of historical resources. Under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (PRC Section 21084.1; 14 CCR 15064.5[b]). If a site is listed or eligible for listing in the CRHR, included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of PRC Section 5024.1[q]), it is a historical resource and is presumed to be historically or culturally significant for the purposes of CEQA (PRC Section 21084.1; 14 CCR 15064.5[a]).

A review of historical aerial photographs and topographic maps indicates that the project site has been subject to past ground disturbances associated with some development and various agricultural uses throughout the twentieth century, as well as disturbances associated with its current site use as a public park. By 1988, the project site is shown to be consistent with the present site conditions. Additionally, a review of the CHRIS database records search for the project site identified no previously recorded archaeological resources within the project site or the 0.5-mile search radius, and the archaeological resources pedestrian survey of the project site was negative.

Archival research and the built environment pedestrian survey identified the presence of a concrete block building constructed circa 1978 located in the southern central portion of the project site. The 1978 concrete block utilitarian building does not meet the definition of a historical resource pursuant to Section 15064.5(a) because it does not meet the 50-year threshold for consideration in the CRHR, nor does it meet the special considerations requirements of 14 CCR 4852(d), which specifies that for a resource less than 50 years of age to be considered eligible for listing in the CRHR, it must be demonstrated that sufficient time has passed to understand its historical importance. Since the building is not known to currently possess any important associations with significant events or the lives of persons important in history under CRHR Criteria 1 and 2, design or construction value under CRHR Criterion 3, or information important in history under CRHR Criterion 4, the subject building would also not meet the special considerations requirements of 14 CCR 4852(d). As such, the subject building lacks the necessary significance to meet any of the criteria for listing in the CRHR and is not considered a historical resource for the purposes of CEQA.

As no resources are present, the project would not cause a substantial adverse change in the significance of a known historical resource pursuant to Section 15064.5. There would be no impact.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Less-than-Significant Impact. As discussed above, the SCCIC records search, review of historic maps and aerial images, and a pedestrian survey did not identify any archaeological resources in the project site. A

review of the historic aerials reveals that the project site has undergone ground disturbing activities from its past use as an agricultural/ranching area and its transition into a park in the 1980s (NETR 2024).

A search of the NAHC SLF was completed and negative results were received on January 31, 2024. As previously mentioned above, a review of the CHRIS database records held at the SCCIC did not identify any cultural resources reports intersecting the project site. No record of previously recorded historic-era or prehistoric archaeological resources are on file with the CHRIS SCCIC as being present within project site.

As no resources are present, the project would not cause a substantial adverse change in the significance of a known archaeological resource pursuant to Section 15064.5.

There is a low potential for encountering subsurface archaeological deposits during project implementation due to the negative CHRIS records search results, negative NAHC SLF results, negative pedestrian survey results, and history of agricultural/ranching activities and transition into a public park impacting the project site. No further cultural resource assessment is recommended in support of implementation of the project. [Pending if mitigation is requested during AB52 consultation.]

Although potential for encountering subsurface archaeological deposits is low, it is possible previously unknown cultural resources could be inadvertently discovered during construction. As such, MM-CUL-1 would be implemented to prevent impacts to potential archaeological resources.

MM-CUL-1 Inadvertent Discovery. In the unlikely event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the project, all construction work occurring within 100 feet of the find shall immediately stop until a qualified archaeologist meeting the Secretary of the Interior's Professional Qualification Standards can evaluate the significance of the find. Construction activities may continue in other areas but should be redirected a safe distance from the find. If the new discovery is evaluated and found to be significant under the California Environmental Quality Act and avoidance is not feasible, additional work such as data recovery may be warranted. A data recovery plan shall be developed by the qualified archaeologist in consultation with the City and Native American representatives, if applicable. Ground disturbance can continue only after the resource has been properly mitigated and with approval by the City.

c) Would the project disturb any human remains, including those interred outside of formal cemeteries?

Less-than-Significant Impact. No prehistoric or historic-era burials, including those interred outside of formal cemeteries, were identified within the project site as a result of the CHRIS records search, NAHC SLF search, or archival background research. Based on the previous ground disturbing activities and the presence of a public park, it is highly unlikely humans remains could be present within the project site.

In the unlikely event that human remains are inadvertently encountered during ground disturbing activities, they must be treated consistent with state and local regulations including California Health and Safety Code Section 7050.5, PRC Section 5097.98, and the California Code of Regulations Section 15064.5l. In accordance with these regulations, if human remains are found, the county coroner shall be immediately notified of the discovery. No further excavation or disturbance of the location of the discovery or any nearby area reasonably suspected to overlie adjacent remains shall occur until the county coroner has determined

the appropriate treatment and disposition of the human remains. If the county coroner determines that the remains are, or are believed to be, Native American, he or she shall follow all required protocols according to PRC Section 5097.98. Compliance with these regulations would ensure that impacts to human remains resulting from the project would be less than significant.

3.6 Energy

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. Energy – Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	☒	☐
b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

a) Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Less-than-Significant Impact. Project implementation would result in energy use for construction and operation, including use of electricity, natural gas, and petroleum-based fuels. The following analysis evaluates the potential wasteful, inefficient, or unnecessary consumption of these energy sources during construction and operation.

Construction Energy Use

Electricity

Electricity consumed during project construction would vary throughout the construction period based on the construction activities being performed. Various construction activities would require electricity, including conveying water that would be used for dust control (supply and conveyance), powering any necessary lighting or electronic equipment, or other construction activities necessitating electrical power. Such electricity demand would be temporary, nominal, and would cease upon the completion of construction. Therefore, the use of electricity during project construction would not be wasteful, inefficient, or unnecessary.

Natural Gas

There would be no natural gas used during construction. Equipment and vehicles would be powered by petroleum-based fuels as discussed below. Therefore, the use of natural gas during project construction would not be wasteful, inefficient, or unnecessary.

Petroleum-Based Fuels

Construction of the project would consume energy resources as a result of the use of heavy-duty construction equipment, on-road delivery and haul trucks, and workers commuting to and from the project site. Petroleum emissions associated with the use of construction equipment and vehicles, which were used to calculate gallons of petroleum consumed, were calculated using CalEEMod and are provided in Appendix A. Fuel consumption from construction equipment was estimated by converting the total carbon dioxide (CO_2) emissions from each construction phase to gallons using the conversion factors for CO_2 to gallons of gasoline or diesel. The conversion factor for gasoline is 8.78 kilograms per metric ton (MT) CO_2 per gallon, and the conversion factor for diesel is 10.21 kilograms per MT CO_2 per gallon (The Climate Registry 2023). The estimated fuel usage from construction of the project is shown in Table 3.6-1.

Table 3.6-1. Total Proposed Project Construction Petroleum Demand

Scenario	Off-Road Equipment (diesel)	Haul Trucks (diesel)	Vendor Trucks (diesel)	Worker Vehicles (gasoline)
	Gallons			
Project Construction	79,734	16,486	2,187	4,728
			Total Petroleum Consumed for Project Construction	103,134

Source: Appendix A.

In summary, construction associated with the development of the project is estimated to consume a total of approximately 103,134 gallons of petroleum. The project would be subject to CARB's In-Use Off-Road Diesel Vehicle Regulation that applies to certain off-road diesel engines, vehicles, or equipment greater than 25 horsepower. The regulation (1) imposes limits on idling, requires a written idling policy, and requires a disclosure when selling vehicles; (2) requires all vehicles to be reported to CARB (using the Diesel Off-Road Online Reporting System) and labeled; (3) restricts the adding of older vehicles into fleets starting on January 1, 2014; and (4) requires fleets to reduce their emissions by retiring, replacing, or repowering older engines or installing Verified Diesel Emission Control Strategies (i.e., exhaust retrofits). The fleet must either show that its fleet average index was less than or equal to the calculated fleet average target rate, or that the fleet has met the Best Achievable Control Technology requirements.

Overall, while construction activities would consume petroleum-based fuels, consumption of such resources would be temporary and would cease upon the completion of construction. Further, the petroleum consumed related to construction would be typical of construction projects of similar types and sizes and would not necessitate new petroleum resources beyond what are typically consumed in California. Therefore, because petroleum use during project construction would be temporary and minimal and would not be wasteful or inefficient, impacts would be less than significant.

Operational Energy Use

Electricity

The proposed projects would require electricity for multiple purposes at buildout, including cooling, lighting, and appliances. CalEEMod default values for energy consumption for the proposed project and existing land uses were applied for the analysis. The energy use from non-residential land uses is calculated in CalEEMod based on the California Commercial End-Use Survey database. Energy use in buildings (both natural gas and electricity) is divided by the program into end-use categories subject to Title 24 requirements (end-uses associated with the building envelope, such as the heating, ventilating, and air conditioning [HVAC] system; water heating system; and integrated lighting) and those not subject to Title 24 requirements (such as appliances, electronics, and miscellaneous "plug-in" uses). Electricity consumption associated with project operations is based on the CalEEMod outputs presented in Appendix A.

According to these estimations, the proposed project would consume approximately 204,513 kilowatt-hours (kWh) per year during operation and the existing baseline conditions consume approximately 61,730 kWh per year, for a net increase of 142,783 kWh per year. For context, local electricity demand in Los Angeles County was approximately 68 billion kWh in 2022 (CEC 2024a). Overall, the net change in electricity demand would be minimal and would not be considered inefficient, wasteful, or unnecessary, and impacts would be less than significant.

Natural Gas

Operation of the proposed project and existing facilities would require natural gas for various purposes in the community services building, including to heat water and operate appliances. Natural gas consumption associated with operation is based on the CalEEMod outputs presented in Appendix A.

According to these estimations, the proposed project would consume approximately 215,445 kilo-British thermal units (kBtu) per year during operation and the existing baseline conditions consume approximately 78,574 kBtu per year, for a net increase of 136,871 kBtu per year. For context, local natural gas demand in Los Angeles County was approximately 282 billion kBtu in 2022 (CEC 2024b). Overall, the net change in natural gas demand would be minimal and would not be considered inefficient, wasteful, or unnecessary, and impacts would be less than significant.

Petroleum

During operations, the majority of fuel consumption resulting from the project would involve the use of motor vehicles traveling to and from the project site, as well as fuels used for alternative modes of transportation that may be used by employees and visitors of the project.

Petroleum fuel consumption associated with motor vehicles is a function of the vehicle miles traveled (VMT) and fuel efficiency. The net change in fuel estimates for the project versus existing scenarios is provided in Table 3.6-2.

Table 3.6-2. Petroleum Demand - Operations

Scenario	Gasoline (On-Road Vehicles and Landscape Equipment)	Diesel (On-Road Vehicles)	Total Petroleum
	Gallons		
Project	82,431	17,955	100,386
Existing	8,255	1,716	9,971
		Net Change (Project–Existing)	90,415

Source: Appendix A.

As depicted in Table 3.6-2, implementation of the project would lead to an incremental increase of approximately 90,415 gallons of petroleum per year, primarily associated with the estimated increase in vehicles from the proposed soccer fields. By comparison, California as a whole consumed approximately 22 billion gallons of petroleum in 2020 (EIA 2023), and in 2021 Los Angeles County consumed approximately 3,061 million gallons of gasoline and 224 million gallons of diesel (CEC 2022).

In summary, implementation of the proposed project would minimally increase the demand for electricity and natural gas at the project site and petroleum consumption in the region during construction and operation. However, because the project would be consistent with current regulations and policies, the proposed facilities would not be wasteful or inefficient and would not result in unnecessary energy resource consumption. The project's energy consumption demands during construction and operation would conform to the state's Title 24 standards such that the projects would not be expected to wastefully use gas and electricity. Since the proposed project would comply with Title 24 building standards, the proposed project would not directly require the construction of new energy generation or supply facilities or result in wasteful, inefficient, or unnecessary consumption of energy. Impacts would be less than significant.

b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Less-than-Significant Impact. The project would be subject to and would comply with, at a minimum, the California Building Energy Efficiency Standards (24 CCR Part 6). These energy efficiency standards are reviewed every 3 years by the Building Standards Commission and the California Energy Commission and revised if necessary (PRC Section 25402[b][1]). Part 6 of Title 24 establishes energy efficiency standards for non-residential buildings constructed in California in order to reduce energy demand and consumption. Part 11 of Title 24 sets forth voluntary and mandatory energy measures that are applicable to the project under the California Green Building Standards. As such, the project would comply with the California code requirements for energy efficiency. The current Title 24 standards are the 2022 Title 24 building energy efficiency standards, which became effective January 1, 2023. Although the project would result in a larger community center than the existing facility, the new building would be designed to be more energy efficient based on compliance with the latest Title 24 standards. Impacts related to the project's potential to conflict with plans for renewable energy and energy efficiency would be less than significant.

3.7 Geology and Soils

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GEOLOGY AND SOILS – Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☐	☒	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

a) Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

and

ii) Strong seismic ground shaking?

Less-than-Significant Impact. The project is located within a seismically active region, as is most of the Southern California region. The project would likely be exposed to seismic ground shaking at multiple points in the future. The intensity of ground shaking at any specific location within the region depends on the characteristics of the earthquakes, the distance from the earthquake epicenter, and the local geologic and soil conditions. Earthquake fault zones are delineated boundaries encompassing active faults that constitute potential hazards to structures from surface faulting or fault creep (DOC 2018).

The project site is not located within an Alquist-Priolo Earthquake Fault Zone; the nearest faults are faults in West Coyote Hills located approximately 7 miles northeast of the project site, the Newport-Inglewood-Rose Canyon Fault Zone located approximately 7.5 miles southwest of the project site, and the Whittier Fault Zone located approximately 7.5 miles northeast of the project site (DOC 2024a). Although the project is not located within a delineated earthquake fault zone, it is located within a seismically active region. However, project construction and operation would not increase or exacerbate the potential for fault rupture to occur. Therefore, the project would not directly or indirectly cause potential adverse effects involving rupture of a known earthquake fault, and impacts would be less than significant.

iii) Seismic-related ground failure, including liquefaction?

Less-than-Significant Impact. Ground failure is a secondary effect of ground shaking and can include landslides, liquefaction, lurching, and differential settlement. Liquefaction is the loss of soil strength due to seismic forces generating various types of ground failure. Liquefaction occurs when saturated and poorly consolidated granular material is shaken during an earthquake and is transformed into a fluid-like state.

According to maps obtained through the California Department of Conservation and California Geological Survey, the entire site is located in a liquefaction zone (DOC 2024a). As such, there is potential for liquefaction to occur. Full project design would include engineering design standards associated with seismic events, including liquefaction. Standard design and construction techniques such as spread footings, mat foundations, or other design considerations would be incorporated per California Building Code requirements, minimizing hazards due to liquefaction. Therefore, impacts would be less than significant.

iv) Landslides?

No Impact. Landslides typically occur on moderate to steep slopes that are affected by such physical factors as slope height, slope steepness, shear strength, and orientation of weak layers in the underlying geologic units. The project site and surroundings are generally flat with soils stabilized by development and landscaping. The project would not result in the creation of moderate to steep slopes that may become susceptible to landslides. As such, no impact would occur.

b) Would the project result in substantial soil erosion or the loss of topsoil?

Less-than-Significant Impact. Construction of the project would require earthwork activities that could potentially contribute to soil erosion or loss of topsoil. Construction of the project would result in more than 1 acre of land disturbance; therefore, a site-specific SWPPP in accordance with SWRCB Order No. 2009-0008-DWQ, National Pollutant Discharge Elimination System General Permit No. CAS00002 (Construction General Permit), amended by Order No. 2010-0014-DWQ and Order No. 2012-0006-DWQ, would be prepared and implemented during project construction. One of the purposes of the SWPPP is to address potential pollutants and their sources, including sources of sediment and site erosion. Conditions of these existing regulations would include adherence to sediment and stormwater pollutant control BMPs, such as covering of exposed soil stockpiles, sediment barriers, storm drain protection, and various other measures designed to minimize potential for soil erosion and loss of topsoil. Once complete, disturbed areas of the park would be similar to existing conditions. Operation of the proposed stormwater capture and filtration facility would be located underground and would not affect erosion. Therefore, the project would not result in substantial soil erosion of the loss of topsoil and impacts would be less than significant.

c) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less-than-Significant Impact. As previously discussed, the project site is located in a liquefaction zone. Full project design would include continued geotechnical investigations to inform final design and construction of the project relative to minimization of potential geotechnical risks, including soil stability, per applicable California Building Code requirements. Therefore, the project would not exacerbate geotechnical hazards related to unstable soils and impacts would be less the significant.

d) Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less-than-Significant Impact. Expansive soils are clay-based and tend to increase in volume due to water absorption and decrease in water volume due to drying. Full project design would include continued geotechnical investigations including sampling and analysis of soils on site. If such conditions are encountered, the project would employ standard engineering protocols to limit the potential effects on project-related infrastructure. Therefore, impacts would be less than significant.

e) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. The project would not involve the use of septic tanks or alternative wastewater disposal systems. Therefore, no impact would occur.

f) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less-than-Significant Impact with Mitigation Incorporated. The project site and underlying soils have been previously disturbed by the development of the existing Hermosillo Park, underlying infrastructure, and surrounding development.

Dudek submitted a paleontological records search request to the Natural History Museum of Los Angeles County (LACM) of the project site and the surrounding vicinity, and the results were received on February 5, 2024. The LACM reported no fossil localities within the project site; however, they did locate six fossil localities nearby from the same sedimentary deposits that may occur in the project site, either at the surface or at depth. These included LACM VP (vertebrate paleontology) 3347, LACM VP 4185-4201, LACM VP 3660, LACM VP 3382, LACM VP 3319, and LACM VP 4129, which yielded vertebrate specimens of horse, bison, camel, mammoth, mastodon, elephant clade, dire wolf, coyote, deer, dwarf pronghorn, unidentified artiodactyl, and sea duck. No paleontological resources were identified within the project site as a result of the records search and the project site is not anticipated to be underlain by unique geologic features. In the event that intact paleontological resources are located beneath the project site, ground-disturbing activities associated with construction of the proposed project, such as grading during site preparation and large diameter drilling (more than 2 feet diameter), have the potential to destroy a unique paleontological resource or site. Without mitigation, the potential damage to paleontological resources during construction would be a potentially significant impact. However, upon implementation of MM-GEO-1, impacts would be reduced to below the level of significance. Impacts of the proposed project would be less than significant with mitigation incorporated during construction.

MM-GEO-1 Paleontological Resources Monitoring: If excavations below a depth of 5 feet below the original ground surface are planned for the proposed project, a qualified City certified paleontologist meeting the Society of Vertebrate Paleontology's 2010 standards should be retained to determine when and where paleontological monitoring is warranted. The qualified paleontologist or a qualified paleontological monitor meeting the Society of Vertebrate Paleontology's 2010 standards under the direction of the qualified paleontologist should conduct the paleontological monitoring. If the sediments are determined by the qualified paleontologist to be too young or too coarse-grained to likely preserve paleontological resources, the qualified paleontologist can reduce or terminate monitoring per the Society of Vertebrate Paleontology's 2010 guidelines and based on the excavations remaining for the proposed project. The paleontological monitor should complete daily monitoring logs documenting construction activities and geological and paleontological observations. The qualified paleontologist should produce a final paleontological monitoring report that discusses the paleontological monitoring program, any paleontological discoveries, and the preparation, curation, and accessioning of the fossils into a suitable paleontological repository with retrievable storage.

3.8 Greenhouse Gas Emissions

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. GREENHOUSE GAS EMISSIONS – Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less-than-Significant Impact. Greenhouse gases (GHGs) are those that absorb infrared radiation (i.e., trap heat) in the Earth's atmosphere. The trapping and buildup of heat in the atmosphere near the Earth's surface (the troposphere) is referred to as the "greenhouse effect" and is a natural process that contributes to the regulation of the Earth's temperature, creating a livable environment on Earth. The Earth's temperature depends on the balance between energy entering and leaving the planet's system, and many factors (natural and human) can cause changes in Earth's energy balance. Human activities that generate and emit GHGs to the atmosphere increase the amount of infrared radiation that gets absorbed before escaping into space, thus enhancing the greenhouse effect and causing the Earth's surface temperature to rise. This rise in temperature has led to large-scale changes to the Earth's system (e.g., temperature, precipitation, wind patterns), which are collectively referred to as climate change. Global climate change is a cumulative impact; a project contributes to this impact through its incremental contribution combined with the cumulative increase of all other sources of GHGs. Thus, GHG impacts are recognized exclusively as cumulative impacts (CAPCOA 2008).

As defined in California Health and Safety Code Section 38505(g) for purposes of administering many of the state's primary GHG emissions reduction programs, GHGs include CO_2, methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and nitrogen trifluoride (see also CEQA Guidelines Section 15364.5). The primary GHGs that would be emitted by project-related construction and operations include CO_2, CH_4, and N_2O.[7]

The Intergovernmental Panel on Climate Change developed the global warming potential (GWP) concept to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. The reference gas used is CO_2; therefore, GWP-weighted emissions are measured in MT of CO_2 equivalent (CO_2e). The current version of CalEEMod assumes that the GWP for CH_4 is 25 (so emissions of 1 MT of CH_4 are equivalent to emissions of 25 MT of CO_2), and the GWP for N_2O is 298, based on the Intergovernmental Panel on Climate Change's Fourth Assessment Report (IPCC 2007).

[7] Emissions of hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and nitrogen trifluoride are generally associated with industrial activities, including the manufacturing of electrical components and heavy-duty air conditioning units and the insulation of electrical transmission equipment (substations, power lines, and switch gears). Therefore, emissions of these GHGs were not evaluated or estimated in this analysis because the project would not include these activities or components and would not generate hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, or nitrogen trifluoride in measurable quantities.

Section 15064.7(c) of the CEQA Guidelines specifies that "when adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies, or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence." The CEQA Guidelines do not prescribe specific methodologies for performing an assessment, establish specific thresholds of significance, or mandate specific mitigation measures. Rather, the CEQA Guidelines emphasize the lead agency's discretion to determine the appropriate methodologies and thresholds of significance that are consistent with the manner in which other impact areas are handled in CEQA (CNRA 2009).

As discussed in Section 3.3, the proposed project is located within the jurisdictional boundaries of the SCAQMD. In October 2008, the SCAQMD proposed recommended numeric CEQA significance thresholds for GHG emissions for lead agencies to use in assessing GHG impacts of residential and commercial development projects as presented in its Draft Guidance Document—Interim CEQA Greenhouse Gas (GHG) Significance Threshold (SCAQMD 2008b). This document, which builds on the California Air Pollution Control Officers Association's previous guidance, explored various approaches for establishing a significance threshold for GHG emissions. The draft interim CEQA thresholds guidance document was not adopted or approved by the Governing Board. However, in December 2008, the SCAQMD adopted an interim 10,000 MT CO_2e per-year screening level threshold for stationary source/industrial projects for which the SCAQMD is the lead agency (SCAQMD 2010). The 10,000 MT CO_2e per-year threshold, which was derived from GHG reduction targets established in Executive Order S-3-05, was based on the conclusion that the threshold was consistent with achieving an emissions capture rate of 90% of all new or modified stationary source projects.

The SCAQMD formed a GHG CEQA Significance Threshold Working Group to work with SCAQMD staff on developing GHG CEQA significance thresholds until statewide significance thresholds or guidelines are established. From December 2008 to September 2010, the SCAQMD hosted working group meetings and revised the draft threshold proposal several times, although it did not officially provide these proposals in a subsequent document. The SCAQMD has continued to consider adoption of significance thresholds for residential and general land-use development projects. The most recent proposal issued by SCAQMD, issued in September 2010, uses the following tiered approach to evaluate potential GHG impacts from various uses (SCAQMD 2010):

Tier 1. Determine if CEQA categorical exemptions are applicable. If not, move to Tier 2.

Tier 2. Consider whether or not the proposed project is consistent with a locally adopted GHG reduction plan that has gone through public hearing and CEQA review, that has an approved inventory, includes monitoring, etc. If not, move to Tier 3.

Tier 3. Consider whether the project generates GHG emissions in excess of screening thresholds for individual land uses. The 10,000 MT CO_2e per-year threshold for industrial uses would be recommended for use by all lead agencies. Under option 1, separate screening thresholds are proposed for residential projects (3,500 MT CO_2e per year), commercial projects (1,400 MT CO_2e per year), and mixed-use projects (3,000 MT CO_2e per year). Under option 2, a single numerical screening threshold of 3,000 MT CO_2e per year would be used for all non-industrial projects. If the project generates emissions in excess of the applicable screening threshold, move to Tier 4.

Tier 4. Consider whether the project generates GHG emissions in excess of applicable performance standards for the project service population (population plus employment). The efficiency targets were established based on the goal of AB 32 to reduce statewide GHG emissions to 1990 levels by 2020. The 2020 efficiency targets are 4.8 MT CO_2e per-service population for project-level analyses and 6.6 MT CO_2e per-service population for plan-level analyses. If the project generates emissions in excess of the applicable efficiency targets, move to Tier 5.

Tier 5. Consider the implementation of CEQA mitigation (including the purchase of GHG offsets) to reduce the project efficiency target to Tier 4 levels.

To determine the proposed project's potential to generate GHG emissions that would have a significant impact on the environment, its GHG emissions were compared to the SCAQMD 3,000 MT CO_2e per year screening threshold recommended for non-industrial projects.

Construction

Construction of the project would result in GHG emissions, which are primarily associated with off-road construction equipment, on-road haul and vendor trucks, and worker vehicles. The SCAQMD recommends that "construction emissions be amortized over a 30-year project lifetime, so that GHG reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies" (SCAQMD 2008b). CalEEMod was used to calculate the annual GHG emissions based on the construction scenario described in Section 2.3, Construction Phasing and Schedule. Table 3.8-1 presents the GHG emissions resulting from construction of the project. For further detail on the assumptions and results of this analysis, please refer to Appendix A.

Table 3.8-1. Estimated Annual Construction Greenhouse Gas Emissions

Year	CO_2	CH_4	N_2O	R	CO_2e
	Metric Tons				
2024	255.84	0.01	0.01	0.06	258.69
2025	659.97	0.03	0.03	0.18	668.97
2026	129.64	0.01	0.00	0.02	130.42
Total	**1,045.45**	**0.04**	**0.04**	**0.26**	**1,058.08**
			Amortized Construction Emissions (Over 30-Years)		*35.27*

Source: Appendix A
Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; R = refrigerants; CO_2e = carbon dioxide equivalent.
Totals may not sum due to rounding.

As shown in Table 3.8-1, the estimated total GHG emissions during construction would be approximately 1,058 MT CO_2e. Estimated project-generated construction emissions amortized over 30 years would be approximately 35 MT CO_2e per year. In addition, as with project-generated construction criteria air pollutant emissions, GHG emissions generated during proposed construction activities would be short term, lasting only for the duration of the construction period, and would not represent a long-term source of GHG emissions.

Operational Emissions

CalEEMod was also used to estimate potential project-generated operational GHG emissions from mobile sources, area sources (i.e., landscape maintenance equipment), energy sources (electricity and natural gas), water use and wastewater generation, refrigerants, and solid waste (i.e., CO_2e emissions associated with landfill off-gassing). Operational emissions were also quantified for the existing park uses. Table 3.8-2 shows the estimated annual GHG emissions from operation of the proposed project and the existing scenario. As discussed above, the net increase in annual operational emissions was combined with amortized construction emissions and compared to SCAQMD's recommended threshold of 3,000 MT CO_2e per year for non-industrial projects.

Table 3.8-2. Estimated Annual Operational GHG Emissions

Emission Source	CO_2	CH_4	N_2O	R	CO_2e
	Metric Tons per Year				
Project					
Mobile	906.89	0.04	0.04	1.24	920.49
Area	0.17	<0.01	<0.01	N/A	0.17
Energy	43.55	<0.01	<0.01	N/A	43.77
Water	10.24	0.05	<0.01	N/A	11.87
Waste	0.75	0.08	0.00	N/A	2.63
Refrigerants	N/A	N/A	N/A	<0.01	0.00
Total	**961.60**	**0.17**	**0.04**	**1.24**	**978.93**
Existing					
Mobile	89.94	<0.01	<0.01	0.16	91.37
Area	0.06	<0.01	<0.01	N/A	0.06
Energy	13.93	<0.01	<0.01	N/A	14.00
Water	9.49	0.02	<0.01	N/A	10.12
Waste	0.32	0.03	0.00	N/A	1.11
Refrigerants	N/A	N/A	N/A	<0.01	0.00
Total	**113.74**	**0.05**	**0.00**	**0.16**	**116.66**
				Net Increase (Project–Existing)	**862.27**
				Amortized 30-Year Construction Emissions	*35.27*
				Total Net Increase in Annual Emissions	**897.54**

Source: Appendix A.
Notes: GHG = greenhouse gas; CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; R= refrigerants; CO_2e = carbon dioxide equivalent; N/A = not applicable.

As shown in Table 3.8-2, the estimated total net increase in GHG emissions from operation of the proposed project would be approximately 898 MT CO_2e per year, including amortized construction emissions. The proposed project would not exceed the SCAQMD threshold of 3,000 MT CO_2e per year. Projects below this significance criterion have a minimal contribution to global emissions and are considered to have less-than-significant impacts. Therefore, operational impacts associated with directly or indirectly generating a significant quantity of GHG emissions would be less than significant.

b) Would the project generate conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less-than-Significant Impact. Applicable plans for the project site include SCAG's 2020–2045 RTP/SCS and CARB's 2017 and 2022 Scoping Plan Updates to address Senate Bill (SB) 32 and Assembly Bill (AB) 1279. Each of these plans is described below along with an analysis of the proposed project's potential to conflict with the related GHG emission reduction goals.

Project Consistency with SCAG's 2020 RTP/SCS

On September 3, 2020, the Regional Council of SCAG formally adopted the 2020–2045 RTP/SCS as a regional growth management strategy, which targets per capita GHG reduction from passenger vehicles and light-duty trucks in the Southern California region pursuant SB 375. In addition to demonstrating the region's ability to attain the GHG emission-reduction targets set forth by CARB, the 2020–2045 RTP/SCS outlines a series of actions and strategies for integrating the transportation network with an overall land use pattern that responds to projected growth, housing needs, changing demographics, and transportation demands (SCAG 2020). Thus, successful implementation of the 2020–2045 RTP/SCS would result in more complete communities with various transportation and housing choices while reducing automobile use.

The primary objective of the RTP/SCS is to provide guidance for future regional growth (i.e., the location of new residential and non-residential land uses) and transportation patterns throughout the region, as stipulated under SB 375. Given that the proposed project involves the renovation of an existing park and the construction of a stormwater capture and treatment facility, the goals and strategies of the RTP/SCS are not directly applicable. As such, the proposed project would not conflict with the goals and policies of the RTP/SCS and impacts would be less than significant.

Project Consistency with State Reduction Targets and CARB's Scoping Plan

The California State Legislature passed the Global Warming Solutions Act of 2006 (AB 32) to provide initial direction to limit California's GHG emissions to 1990 levels by 2020 and initiate the state's long-range climate objectives. Since the passage of AB 32, the state has adopted GHG emissions reduction targets for future years beyond the initial 2020 horizon year. For the proposed project, the relevant GHG emissions reduction targets include those established by SB 32 and AB 1279, which require GHG emissions be reduced to 40% below 1990 levels by 2030, and 85% below 1990 levels by 2045, respectively. In addition, AB 1279 requires the state achieve net zero GHG emissions by no later than 2045 and achieve and maintain net negative GHG emissions thereafter.

As defined by AB 32, CARB is required to develop the Scoping Plan, which provides the framework for actions to achieve the state's GHG emission targets. The Scoping Plan is required to be updated every 5 years and requires CARB and other state agencies to adopt regulations and initiatives that will reduce GHG emissions statewide. The first Scoping Plan was adopted in 2008, and it was updated in 2014, 2017, and most recently in 2022. Although the Scoping Plan is not directly applicable to specific projects, nor is it intended to be used for project-level evaluations,[8] it is the official framework for the measures and

[8] The Final Statement of Reasons for the amendments to the CEQA Guidelines reiterates the statement in the Initial Statement of Reasons that "the Scoping Plan may not be appropriate for use in determining the significance of individual projects because it

regulations that will be implemented to reduce California's GHG emissions in alignment with the adopted targets. Therefore, a project would be found to not conflict with the statutes if it would meet the Scoping Plan policies and would not impede attainment of the goals therein.

CARB's 2017 Scoping Plan update was the first to address the state's strategy for achieving the 2030 GHG reduction target set forth in SB 32 (CARB 2017); the most recent CARB 2022 Scoping Plan update outlines the state's plan to reduce emissions and achieve carbon neutrality by 2045 in alignment with AB 1279 and assesses progress toward the 2030 SB 32 target (CARB 2022b). As such, given that SB 32 and AB 1279 are the relevant GHG emission targets, the 2017 and 2022 Scoping Plan updates are the most applicable to the proposed project.

The 2017 Climate Change Scoping Plan Update included measures to promote renewable energy and energy efficiency (including the mandates of SB 350), measures to increase stringency of the Low Carbon Fuel Standard, measures identified in the Mobile Source and Freight Strategies, measures identified in the proposed Short-Lived Climate Pollutant Plan, and measures to increase stringency of SB 375 targets. The 2022 Scoping Plan for Achieving Carbon Neutrality builds upon and accelerates programs currently in place, including moving to zero-emission transportation; phasing out use of fossil gas use for heating homes and buildings; reducing chemical and refrigerants with high GWP; providing communities with sustainable options for walking, biking, and public transit; and displacement of fossil-fuel fired electrical generation through use of renewable energy alternatives (e.g., solar arrays and wind turbines) (CARB 2022b).

Many of the measures and programs included in the Scoping Plan would result in the reduction of project-related GHG emissions with no action required at the project-level, including GHG emission reductions through increased energy efficiency and renewable energy production (SB 350), reduction in carbon intensity of transportation fuels (Low Carbon Fuel Standard), and the accelerated efficiency and electrification of the statewide vehicle fleet (Mobile Source Strategy). Given that the proposed project is also not anticipated to result in substantial increase in mobile trips (see Section 3.17, Transportation), the project would also not conflict with the 2017 update's goal of reducing GHG emissions through reductions in VMT statewide.

The 2045 carbon neutrality goal required CARB to expand proposed actions in the 2022 update to include those that capture and store carbon in addition to those that reduce anthropogenic sources of GHG emissions. The proposed project would support the state's carbon neutrality goals, as implementation includes addition of urban trees and native plantings throughout the project site, which represent opportunities for potential carbon removal and sequestration over the project lifetime. However, the 2022 update emphasizes that reliance on carbon sequestration in the state's natural and working lands will not be sufficient to address residual GHG emissions, and achieving carbon neutrality will require research, development, and deployment of additional methods to capture atmospheric GHG emissions (e.g., mechanical direct air capture). Given that the specific path to neutrality will require development of technologies and programs that are not currently known or available, the project's role in supporting the statewide goal would be speculative and cannot be wholly identified at this time.

Overall, the proposed project would comply will all regulations adopted in furtherance of the Scoping Plan to the extent applicable and required by law. As mentioned above, several Scoping Plan measures would result

is conceptual at this stage and relies on the future development of regulations to implement the strategies identified in the Scoping Plan" (CNRA 2009).

in reductions of project-related GHG emissions with no action required at the project-level, including those related to energy efficiency, reduced fossil fuel use, and renewable energy production. As demonstrated above, the proposed project would not conflict with CARB's 2017 or 2022 Scoping Plan updates or with the state's ability to achieve the 2030 and 2045 GHG reduction and carbon neutrality goals.

Based on the preceding considerations, the proposed project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing GHG emissions, and impacts would be less than significant.

3.9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. HAZARDS AND HAZARDOUS MATERIALS – Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☒	☐	☐
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	☒
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	☐	☐	☐	☒

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less-than-Significant Impact. Relatively small amounts of commonly used hazardous substances such as gasoline, diesel fuel, lubricating oil, adhesive materials, grease, solvents, and architectural coatings would be used during construction. Operation and maintenance of the project would also require routine use of common hazardous substances. These materials are used routinely throughout urban environments for construction projects and operation of utility infrastructure. These materials would be transported and handled in accordance with all federal, state, and local laws regulating the management and use of hazardous materials. Consequently, use of these materials for their intended purpose would not pose a significant risk to the public or environment. With adherence to state and local regulations, impacts associated with routine transport, use, and disposal of hazardous materials would be less than significant.

b) Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less-than-Significant Impact. As discussed under Section 3.9(a), construction and operation would involve relatively small amounts of commonly used hazardous substances such as gasoline, diesel fuel, lubricating oil, grease, adhesive materials, and solvents. These materials are not considered acutely hazardous and are used routinely throughout urban environments for both construction and operation of projects. Further, these materials would be transported, handled, and disposed in accordance with all federal, state, and local laws regulating the management and use of hazardous materials. Impacts would be less than significant.

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less-than-Significant Impact with Mitigation Incorporated. Sanchez Elementary School is approximately 150 feet southwest of the project site, with 162nd Street between the project site and the school property. Construction and operation of the project would involve relatively small amounts of commonly used hazardous substances such as gasoline, diesel fuel, lubricating oil, grease, adhesive materials, and solvents. These materials are used routinely throughout urban environments for construction projects and would not pose a significant risk to the public or environment. Additionally, these materials would be transported and handled in accordance with all federal, state, and local laws regulating the management and use of hazardous materials.

Potential health impacts related to construction air emissions are analyzed in Section 3.3 of this MND. As discussed in Section 3.3, proposed construction activities would generate emissions in excess of site-specific LSTs for PM_{10} and $PM_{2.5}$; therefore, localized impacts of the proposed project warrant implementation of mitigation. MM-AQ-1 and MM-AQ-2, which require site watering and minimum construction equipment emissions standards, would be incorporated into project construction and would reduce emissions to below site-specific LSTs (refer to Table 3.3-5). Additionally, a construction HRA was performed for the project, which demonstrates that the unmitigated construction DPM emissions would result in a potential maximum cancer risk at the Maximally Exposed Individual Resident and school that would be below the applicable SCAQMD thresholds. In addition, MM-AQ-2, which requires use of Tier 4 Final engines for equipment greater than 75 horsepower, would substantially reduce DPM emissions (by

approximately 84%) and associated risk from implementation of stringent off-road equipment exhaust controls. With the incorporation of MM-AQ-1 and MM-AQ-2, emissions would be reduced to below applicable thresholds. As such, impacts would be less than significant with mitigation incorporated.

Operation of the project would involve the use of underground stormwater filtration system and the use of the park facilities consistent with the current uses. Operation of the project would not result in the release of hazardous emissions or the emission or use of acutely hazardous materials. Therefore, operational use would result in less-than-significant impacts.

d) Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less-than-Significant Impact. The California Department of Toxic Substances Control's EnviroStor database tracks cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known contamination. According to the EnviroStor database, no sites or facilities are located within or adjacent to the project site. The nearest identified active site is the Former Clown Cleaners, a Voluntary Cleanup Site, located approximately 1.3 miles northwest of the project site (DTSC 2024). Due to its status and distance from the project site, this active site would not have a significant effect on the project site. Other state and local government agencies are required to provide additional hazardous materials release information for the Cortese List. The SWRCB's GeoTracker database identifies leaking underground storage tanks, waste discharge sites, oil and gas sites, and other waste or cleanup sites. A review of GeoTracker did not identify any sites or facilities within or adjacent to the project site. The nearest identified sites with open-site assessment statuses include Diamond Tire Center (ID No. T0603704070), a LUST Cleanup Site, located approximately 0.35 miles southwest of the project site, and Artesia Building Materials, INC. (ID No. T0603750351), a LUST Cleanup Site, located approximately 0.40 miles southwest of the project site (SWRCB 2024). These hazardous materials sites are located at adequate distances from the project site such that they would not present a worker hazard for construction crews. Impacts would be less than significant.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. The project site is approximately 5.3 miles northwest of the Fullerton Municipal Airport, approximately 5.7 miles northeast of the Long Beach Airport, and approximately 9 miles east of the Compton/Woodley Airport. The project site does not fall within the airport land use plan for these airports. The project is not located within 2 miles of a public use airport. Therefore, no impact would occur.

f) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less-than-Significant Impact. The City has prepared a Local Hazard Mitigation Plan. The hazard mitigation plan is a document that contains information and policies to reduce risks from disasters to the people, property, economy, and environment within the City (City of Norwalk 2022). Construction of the stormwater capture and filtration facility would require the construction of diversion pipelines, one within park boundaries and one beneath Algardi Street. Construction would require temporary work in Algardi Street

and Horst Avenue, including pavement removal, trench excavation, pipe and vault installation, and pavement resurfacing. Portions of traffic lanes would be closed during construction. All road closures would be performed pursuant to a traffic-control plan prepared by the contractor and approved by the City Engineer (see Section 3.17 for further information). Access to residential driveways would be maintained at all times. Traffic on Algardi Street and Horst Avenue would resume to existing conditions upon completion of the project. Project construction and operation would not include any other activities that would interfere with emergency response or emergency evacuation. Impacts would be less than significant.

g) Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

No Impact. The project site is located within a Local Responsibility Area and is not located within a Very High Fire Hazard Severity Zone (CAL FIRE 2023). The nearest Very High Fire Hazard Severity Zone is located in Whittier, approximately 7 miles northeast of the project site. In the event of an emergency, fire response services for the project are provided by the Los Angeles County Fire Department. Construction and operation of the project would comply with Chapter 15.08 of the City's Municipal Code, which adopts the California Fire Code (CFC) by reference. Chapter 33 of the CFC outlines general fire safety precautions during construction and demolition that are intended to maintain minimum levels of fire protection and limit the spread of fire. The project would not include structures intended for long-term occupancy or include development that could exacerbate fire risk. Furthermore, the project site is relatively flat and would not influence prevailing winds or other factors that could exacerbate wildfire risk. As such, people and structures would not be exposed to a significant risk of loss, injury, or death involving wildfires. No impact would occur.

3.10 Hydrology and Water Quality

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
X. HYDROLOGY AND WATER QUALITY – Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
i) result in substantial erosion or siltation on- or off site;	☐	☐	☒	☐
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off site;	☐	☐	☒	☐
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) impede or redirect flood flows?	☐	☐	☒	☐
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

a) Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less-than-Significant Impact. The project site is located within the LSGR Watershed Group jurisdiction. The LSGR Watershed Group's WMP was developed to achieve reductions in the pollutants in the waterbodies of the LSGR and its tributaries. The WMP was developed to implement the requirements of the MS4 permits on a watershed scale, and it identified a need for watershed control measures and structural BMPs to address water quality objectives within the watershed (described in more detail in Section 1.1, Project Background and Overview).

Construction of the project would involve ground disturbing activities for grading that could result in sediment discharge in stormwater runoff. Additionally, construction would involve the use of oil, lubricants, and other chemicals that could be discharged from leaks or accidental spills. These potential sediment and chemical discharges during construction would have the potential to impact water quality in receiving water bodies. However, the project would be required to prepare and implement a SWPPP in compliance with the General Construction Permit, which would include water quality BMPs to ensure that water quality standards are met and that runoff from the construction work areas does not cause degradation of water quality in receiving water bodies. Further, the project would comply with the City's Municipal Code Chapter 18.04, Stormwater Management and Discharge Control, which regulates discharge to the municipal stormwater system. Through the incorporation of BMPs through implementation of SWPPP requirements, impacts associated with water quality standards during construction would be less than significant.

The purpose of the project is to decrease the amount of pollutants in stormwater and dry-weather runoff entering the LSGR. The project would be implementing identified improvements in the LSGR WMP for

pollution reduction. Upon operation, existing stormwater flows would be diverted and treated prior to infiltration and/or discharge, resulting in water quality benefits compared to existing conditions. Ongoing maintenance and sampling would ensure that the project is performing as expected in terms of treatment of stormwater. Therefore, impacts during operation would be less than significant.

b) Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less-than-Significant Impact. The project would include the installation of three underground storage reservoirs that would connect to existing storm drains to collect stormwater. The reservoirs would have permeable concrete floors to allow water to seep into the underlying aquifer and provide natural filtration through the soil. In this way, the project would increase groundwater recharge in areas under the park. The project would not otherwise result in a substantial change in impervious surfaces that would affect groundwater infiltration because the proposed park rehabilitation would replace all existing amenities with improved features that would not substantially alter the amount of impervious surface and would be consistent with the existing uses and conditions at the park. Additionally, the project would not entail temporary or permanent use of groundwater and, thus, would not deplete groundwater within the project vicinity. Therefore, the project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge; impacts would be less than significant.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial erosion or siltation on- or off site?

and

ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off site?

and

iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

and

iv) Impede or redirect flood flows?

Less-than-Significant Impact. The project would not substantially alter existing drainage patterns, including streams or river courses. Construction of the project would entail temporary earthwork to excavate and install the storage reservoirs and infiltration galleries. Implementation of the project-specific SWPPP, including BMPs, would prevent substantial erosion and siltation of exposed soils during construction activities. Once construction of the stormwater infrastructure is complete, the park facilities would be replaced with enhanced facilities to serve the needs of park visitors.

In operation, the intent of the project is to capture and divert stormwater flows, which would be directed to the underground system and therefore would not result in substantial erosion, siltation, or runoff. Operation of the stormwater infrastructure would improve the stormwater system because it would improve storage, infiltration, and filtration capabilities, which would reduce pollution of stormwater runoff. The project would not result in a substantial change in impervious surfaces within the project site because the proposed park rehabilitation would include the replacement of existing features with similar, enhanced park features. Therefore, implementation of the project would not substantially alter the existing drainage pattern of the site or area in a way that would cause substantial erosions, flooding, polluted runoff, or changes to flood flows. Impacts would be less than significant.

d) In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?

No Impact. According to Federal Emergency Management Agency flood maps, the project site is partially located in a Flood Zone X, characterized as an area with reduced flood risk due to levee (FEMA 2008). Additionally, the project site is not located within a tsunami inundation zone and seiches do not pose a hazard to the project site (DOC 2024b). The project would include the construction of a stormwater capture and treatment facility, which would improve the water quality of the LSGR. As discussed in Section 3.10(a), the project would prepare a SWPPP, which would include water quality BMPs to ensure that water quality standards are met and that runoff from the construction work areas does not cause degradation of water quality in receiving water bodies. Upon completion of construction, the project would not require the storage of pollutants that, in the event of inundation, could be released. When the water level in the reservoir reaches a predetermined elevation during heavy storm flows, excess inflow would enter a discharge pipeline for final pollutant removal prior to reentering the storm drain system and discharging into LSGR, similar to existing flow conditions except the stormwater flow would be pre-treated. Therefore, no impact associated with the risk of release of pollutants due to project inundation in a flood hazard, tsunami, or seiche zone would occur.

e) Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less-than-Significant Impact. As discussed in greater detail in Chapter 1, Introduction, the proposed project is identified in the LSGR WMP as a regional BMP project that would help meet regional pollution reduction goals. The project would implement the applicable water quality control plan for the region. As discussed previously, the project would allow for infiltration into the underlying soils and would not interfere with groundwater supplies. Therefore, the project would not conflict with a water quality control plan or sustainable groundwater management plan and impacts would be less than significant.

3.11 Land Use and Planning

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. LAND USE AND PLANNING – Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

a) Would the project physically divide an established community?

No Impact. The project would be located within the existing Hermosillo Park and beneath Algardi Street. The project would not create a physical division of an existing community, like what could occur with the development of a freeway or large linear infrastructure. The project would not result in a removal of an existing means of access, such as a road or bridge, that would impede mobility with an existing community and other areas. Construction would require temporary work in Algardi Street and Horst Avenue. Portions of traffic lanes would be closed during construction. Access to residential driveways would be maintained at all times. Upon completion, recreational use of the affected portion of the park and Traffic on Algardi Street and Horst Avenue would resume under existing conditions. Therefore, the project would not physically divide an established community and no impact would occur.

b) Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact. The project site is zoned as R1 (single-family residential) and has a General Plan land use designation of Open Space/Schools/Public Facilities. The project would include the construction of a stormwater capture and filtration facility, primarily located underground, and improvements to the existing Hermosillo Park. Upon completion, recreational use of the affected portion of the park would resume under similar conditions. Implementation of the project would not result in a change to land uses. Potential environmental impacts associated with the implementation of the project are analyzed throughout this MND. The project will incorporate applicable mitigation measures to reduce environmental impacts. Therefore, the project would not be in conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. Therefore, no impacts would occur.

3.12 Mineral Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. MINERAL RESOURCES – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

a) ***Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?***

and

b) ***Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?***

No Impact. According to maps obtained through the California Department of Conservation and California Geological Survey, the project site is located within in an area designated as Mineral Resource Zone 1, which denotes an area where adequate information indicates that no significant mineral deposits area present, or where it is judged that little likelihood exists for their presence (Miller and Corbaley 1981). Therefore, the project would not result in any further loss of availability of the identified resources and no impact would occur.

3.13 Noise

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. NOISE – Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Existing Setting

The project site is in a developed part of the City that primarily features residential development, along with areas of commercial, light industrial, and public uses. The project site is bounded on the south by 162nd Street and on the north, east, and west by single-family residential properties. On the park's eastern and western sides, Algardi Street and 161st Street feature cul de sacs that abut the project site, with gates providing pedestrian access but no vehicle access. Similar access is available from a Cobos Street cul de sac on the project site's northern side. Sanchez Elementary School is located southwest of Hermosillo Park, across 162nd Street. The project site is designated as Open Space/Schools/Public Facilities in the City General Plan Land Use Map (City of Norwalk 2020) and is zoned as R1 (single-family residential) in the City Zoning Map (City of Norwalk 2023).

Represented by locations ST1, ST2, ST3, and ST4 in Table 3.13-1, the existing outdoor ambient sound environment of Hermosillo Park was sampled during a field survey conducted on February 8, 2024. Collected sample sound pressure level measurements at these locations, along with documented investigator observations regarding perceived or witnessed acoustical contributors to this baseline or pre-project noise environment, also appear in Table 3.13-1. These locations are intended to be representative of the existing single-family homes adjoining the project area. Photographs, tagged survey positions, and instrument details can be found in Appendix C, Noise Modeling Data.

Table 3.13-1. Measured Samples of Existing Outdoor Ambient Sound Level

Survey Position	Description/Address	Time	L_{eq} (dBA)	L_{max} (dBA)	L_{min} (dBA)	Notes (Perceived Sound Sources)
ST1	10 feet northeast of the eastern border of Hermosillo Park	11:59 a.m.–12:15 p.m.	65.2	79.2	56.2	Distant aircraft, distant traffic, distant conversation/yelling, distant dog barking, rustling leaves
ST2	10 feet southeast of the eastern border of Hermosillo Park	12:27 p.m.–12:42 p.m.	57.3	72.7	48.5	Distant aircraft, distant traffic, distant conversation/yelling, distant dog barking, rustling leaves

Table 3.13-1. Measured Samples of Existing Outdoor Ambient Sound Level

Survey Position	Description/Address	Time	L_{eq} (dBA)	L_{max} (dBA)	L_{min} (dBA)	Notes (Perceived Sound Sources)
ST3	6 feet away from 162nd Street across the street of Hermosillo Park	12:47 p.m.–12:50 p.m.	54.2	77.8	51.5	Distant aircraft, distant traffic, distant conversation/yelling, distant dog barking, rustling leaves
ST4	10 feet northwest of the western border of Hermosillo Park	12:53 p.m.–1:08 p.m.	51.3	58.5	47.6	Distant aircraft, distant traffic, distant conversation/yelling, distant dog barking, rustling leaves

Source: Appendix C.
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); dBA = A-weighted decibels; L_{max} = maximum sound level during the measurement interval; L_{min} = minimum sound level during the measurement interval.
Measurements at ST3 were cut short due to a safety concern.

The measured outdoor energy-equivalent sound level (L_{eq}) values appearing in Table 3.13-1 range from 51.3 to 65.2 A-weighted decibels (dBA) and are consistent with expectations for the environment based on the distance to major roadways such as Alondra Boulevard. For instance, guidance from the Federal Transit Administration (FTA) on estimating outdoor ambient sound level indicates that noise from "other roadways" 10 to 50 feet away from a receptor would be an estimated 70 dBA L_{eq} during daytime hours (FTA 2018).

Regulatory Setting and Thresholds of Significance

Local Noise Ordinance and General Plan Guidance

The project site is zoned as R1 (single-family residential) and has a General Plan land use designation of Open Space/Schools/Public Facilities. Section 9.04.120 of the City's Municipal Code sets ambient base noise levels of 55 dBA daytime (7:00 a.m.–10:00 p.m.) and 45 dBA nighttime (10:00 p.m.–7:00 a.m.) for the R1 zoned residential properties north, east, and west of the park and for Sanchez Elementary School south of the park. These noise standards apply to related noise sources referenced in Section 9.04.120. Section 9.04.150(E) of the City's noise regulations (i.e., Chapter 9.04 of the Municipal Code) does not quantify allowable construction noise levels; however, it prohibits construction at any time outside the hours of 7:00 a.m. to 6:00 p.m. or sunset, whichever comes first. Section 9.04.150 G prohibits the operation of pile drivers, hammers, and similar equipment between the hours of 6:00 p.m. or sunset, whichever is later, and 7:00 a.m. . The City's General Plan Noise Element (City of Norwalk 1996) also provides the following relevant policies:

- "Clearly acceptable" Community Noise Exposure Levels, or CNEL, shall not exceed 60 L_{dn} [day–night sound level] or CNEL (dB) for low-density single family residential land uses and 65 L_{dn} or CNEL (dB) for schools.

- "Normally acceptable" CNEL shall not exceed 70 L_{dn} or CNEL (dB) for both low-density single family residential land uses and schools.

Federal Guidance

Lacking quantified noise limits for construction noise at the local level, this assessment adopts the FTA-based guidance of 80 dBA 8-hour L_{eq} at a noise-sensitive receptor to determine impact significance.

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less-than-Significant Impact.

Construction

Construction of the project would result in the temporary generation of noise at the project site. Construction would involve the use of heavy equipment and machinery, such as excavators, loaders, cranes, temporary generators, scrapers, and other equipment. Construction would generate levels of noise that can vary from hour to hour and day to day depending on the equipment in use, the operations being performed, and the distance between the source and receptor. Typically, construction equipment operates in alternating cycles of full power and low power, producing average noise levels less than the maximum noise level. The average sound level of construction activity also depends on the amount of time that the equipment operates and the intensity of construction activities during that time. Table 3.13-2 presents the estimated construction noise level (8-hour L_{eq}) for each anticipated phase of project construction activity. Details of these predictions in Appendix C show the expected acoustical contribution from each type of operating construction equipment for each phase.

Table 3.13-2. Estimated Per-Phase Construction Noise Levels

Project Construction Activity Phase	Nearest Horizontal Distance to Nearest Noise-Sensitive Receptor (Feet)	Predicted 8-hour L_{eq} (dBA) for Nearest Distance	Centroid Horizontal Distance to Nearest Noise-Sensitive Receptor (Feet)	Predicted 8-hour L_{eq} (dBA) for Centroid Distance
Site mobilization	50	71.6	180	64.8
Demolition	155	64.8	315	61.7
Reservoir excavation	50	74.9	180	66.5
Reservoir construction	50	70.2	180	63.4
Pipeline, diversion structure, and treatment facility/pump installation	45	75.3	170	68.4
Field surface replacement	50	74.5	180	63.3
Upper terrace and bleach construction	145	58.2	300	53.9
Community center building construction	155	57.7	315	53.5
Architectural coatings	155	55.6	315	49.4
Basketball court, handball court, amphitheater, splash pad construction	80	62.8	225	56.3
Parking lot reconfiguration	25	73.8	125	64.1

Table 3.13-2. Estimated Per-Phase Construction Noise Levels

Project Construction Activity Phase	Nearest Horizontal Distance to Nearest Noise-Sensitive Receptor (Feet)	Predicted 8-hour L_{eq} (dBA) for Nearest Distance	Centroid Horizontal Distance to Nearest Noise-Sensitive Receptor (Feet)	Predicted 8-hour L_{eq} (dBA) for Centroid Distance
Concrete pathway improvements	25	72.5	125	58.6
Ancillary park improvements	25	72.8	125	63.1

Note: L_{eq} = energy-equivalent sound level; dBA = A-weighted decibel.

The predicted aggregate noise levels for some of the 13 studied construction activity phases are substantially greater than the samples of baseline outdoor ambient noise levels appearing in Table 3.13-1 and would represent an audible change to the environment; however, all predicted levels are less than the 80 dBA 8-hour L_{eq} FTA-based standard and would therefore result in a less-than-significant impact.

Operation

Upon completion of construction, the project would feature underground infrastructure to convey stormwater. On-site features associated with the infrastructure would include a submersible pump station, and its powered mechanical systems would be enclosed in a concrete "wet well" below grade with only a double-door hatch to the above-surface environment. Additionally, it is assumed that the proposed community center would feature operational noise from on-site HVAC systems, along with increased vehicle presence on site associated with the parking lot expansion and potential community events at the proposed amphitheater. On this basis, project operation noise was modeled to determine its effect on nearby noise-sensitive receptors during a daytime scenario (7:00 a.m. to 10:00 p.m.) featuring on-site stormwater capture and HVAC operations; increased parking activity associated with the community center, amphitheater, and basketball/handball courts; and a community event at the proposed amphitheater. Additionally, a nighttime scenario (10:00 p.m. to 7:00 a.m.) featuring only the on-site stormwater capture and community center building HVAC operations was evaluated. Details of these predictions can be found in Appendix C and are presented below in Table 3.13-3.

Table 3.13-3. Predicted Stationary Source Operation Noise Levels

Receptor ID	Receptor Description	Predicted Daytime (7:00 a.m. to 10:00 p.m.) L_{eq} (dBA)	Predicted Nighttime (10:00 p.m. to 7:00 a.m.) L_{eq} (dBA)
NSR1	Sanchez Elementary School -- 50 feet south of project site	48.3	40.9
NSR2	Residence – west of project site	37.6	34.7
NSR3	Residence – west of project site	34.3	31.7
NSR4	Residence – east of project site	40.6	24.3
NSR5	Residence – east of project site	44.4	24.2

Note: L_{eq} = energy-equivalent sound level; dBA = A-weighted decibel.

The results presented in Table 3.13-3 suggest that project operation noise is anticipated to be less than 55 dBA during daytime hours and less than 45 dBA during nighttime hours at the nearest existing sensitive receptors, and thereby comply with the operational noise thresholds (55 dBA between 7:00 a.m. to 10:00

p.m., 45 dBA between 10:00 p.m. to 7:00 a.m.) established in Section 9.04.120 of the City's Municipal Code. Therefore, impacts from on-site operational noise would be less than significant.

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Less-than-Significant Impact. Vibration is oscillatory movement of mass (typically a solid) over time. Depending on their distances to a sensitive receptor, operation of large bulldozers, graders, loaded dump trucks, or other heavy construction equipment and vehicles on a construction site have the potential to cause high vibration amplitudes.

The City's Municipal Code does not have a vibration threshold against which project construction-related groundborne vibration impacts to the community can be assessed. For purposes of this impact assessment, a vibration velocity level of 0.2 inches per second (ips) peak particle velocity (PPV) is used as the standard for evaluating human annoyance (due to perceived groundborne vibration within an occupied structure) and the potential risk for residential building damage due to "continuous" or frequently occurring groundborne vibration events (Caltrans 2020).

Groundborne vibration attenuates rapidly, even over short distances. The attenuation of groundborne vibration as it propagates from source to receptor through intervening soils and rock can be estimated with expressions found in FTA and the California Department of Transportation guidance. For example, for a bulldozer or grader operating as close as 30 feet to the nearest receiving residential land use during the parking lot reconfiguration construction phase as shown in Table 3.13-2, the estimated vibration velocity level would be 0.068 ips PPV per the equation as follows (FTA 2018):

$$PPV_{rcvr} = PPV_{ref} \times (25/D)^{1.5} = 0.068 \text{ ips PPV} = 0.089 \times (25/30)^{1.5}$$

In the above equation, PPVrcvr is the predicted vibration velocity at the receiver position (i.e., residence), PPVref is the reference value at 25 feet from the vibration source (the bulldozer), and D is the actual horizontal distance to the receiver from the source.

During parking lot resurfacing, operation of a vibratory roller is anticipated and could be as close as 30 feet to an existing home. The roller has a reference PPV (PPV_{ref}) of 0.21 ips at 25 feet; therefore, its groundborne vibration would attenuate to 0.16 ips PPV. Both predicted groundborne vibration velocity PPV values associated with project construction are below the 0.2 ips PPV threshold for building occupant annoyance and building damage risk. Impacts during construction would be less than significant.

After completion of project construction, operation of the pump station and other project components are unlikely to cause vibration at the nearest off-site structures. Powered mechanical systems like the submersible pump are designed with reciprocating and/or rotating components that are balanced well and machined to high tolerances of precision that consequently minimize vibration and help sustain long operational life. Furthermore, vibrational energy from pump operation would be attenuated by both the pump enclosure and the surrounding soils. For this reason, project operation groundborne vibration at off-site receptors would be considered less than significant.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. There are no public airports or private airfields within 2 miles of project site, and the project site is far from any aviation traffic noise contour greater than 65 dBA community noise equivalent level. Construction workers and park users would not be exposed to significant aviation noise levels. No impact would occur.

3.14 Population and Housing

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. POPULATION AND HOUSING – Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	☒
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

a) Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

No Impact. Construction of the project would result in a temporary direct increase in construction jobs in the area. However, given the relatively small nature of the project construction and anticipated schedule, the demand for construction employment would likely be met within the existing and future labor market in the City and in the greater Los Angeles County area. If construction workers live outside of the City, these workers would likely commute during the temporary construction period. Operationally, the project does not contain land uses that typically result in direct population growth, such as new homes or large commercial/business centers. The project would not change the use of the existing Hermosillo Park. Upon completion, the project would improve Hermosillo Park to further serve the existing and anticipated future demand for recreational uses within the City. Additionally, the project is consistent with underlying land use and zoning designations. Therefore, the project would not directly result in substantial unplanned population growth in the area.

The project is located in an area served by existing roads and infrastructure. The project does not include the extension of utility infrastructure, such as sewer lines or roads, into previously undeveloped areas that may indirectly induce growth. Therefore, the project would not indirectly result in substantial unplanned population growth in the area. No impact would occur.

b) Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The project site does not contain any existing housing or provide other means of housing people. The project would not displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere. No impact would occur.

3.15 Public Services

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. PUBLIC SERVICES				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
Fire protection?	☐	☐	☐	☒
Police protection?	☐	☐	☐	☒
Schools?	☐	☐	☐	☒
Parks?	☐	☐	☒	☐
Other public facilities?	☐	☐	☐	☒

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

Fire Protection? Police protection? Schools? Other public facilities?

Less than Significant Impact. As discussed in Section 3.14, Population and Housing, the project would not induce substantial unplanned population growth in the area. The project's Community Center Building would include public services such as a Recreation and Park Services Department staff office space and a new police substation. The park office would house one staff member and the police substation would house one officer and one support staff member. The project would not require additional facilities, as these facilities would be part of the Community Center. As such, the potential physical effects have been analyzed in this IS/MND. Therefore, construction, operation, and maintenance of the project would not

require new or physically altered facilities associated with fire protection, police protection, schools, or other public facilities. No impacts would occur.

Parks?

Less-than-Significant Impact. The project is located within Hermosillo Park and would result in physical alteration to an existing park. The total duration of project construction is anticipated to be 24 months and would require temporary closure of the park. All of Hermosillo Park is expected to be closed to the public for the duration of project construction. Park activities would be expected to be temporarily moved to nearby parks, which would accommodate the demand. The proposed stormwater capture and filtration facility would be located primarily underground and would not affect park use. The project would replace all existing amenities at Hermosillo Park with improved features as described in Section 2.2.2. Upon completion of construction, recreational use of the park would resume similar to existing conditions. As such, implementation of the project would not require the provision of new parks. Therefore, impacts to parks as a result of the project would be less then significant.

3.16 Recreation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less-than-Significant Impact. The total duration of project construction is anticipated to be 24 months, and construction would require the temporary closure of Hermosillo Park. Park activities would be expected to be temporarily moved to nearby parks, which would accommodate the demand. As such, project construction may result in the temporary increase in use of other parks in the City. However, upon completion of construction, recreational use of the park would resume under existing conditions. As such, impacts to recreational facilities would be less than significant.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

Less-than-Significant Impact. The project would include improvements to the existing Hermosillo Park. As discussed in Section 3.16(a), the temporary closure of the park may result in an increase in use of other parks in the City. However, upon completion of construction, recreational use of the park would resume under existing conditions. Furthermore, as discussed in Section 3.14, implementation of the project would not induce population growth. As such, the project would not require the construction or expansion of other recreational facilities. As the proposed project includes the rehabilitation of a recreational facility, potential environmental impacts associated with the implementation of the project are analyzed throughout this MND, and potential impacts that have been identified related to air quality, biological resources, and archeological and paleontological resources would be reduced to a less-than-significant impact with mitigation. Therefore, impacts would be less than significant.

3.17 Transportation

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. TRANSPORTATION – Would the project:				
a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☒	☐
b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access?	☐	☐	☒	☐

This section evaluates the potential transportation related impacts of the project, including the potential for the project to conflict with a program, plan, ordinance, or policy addressing the circulation system; substantially increase hazards; or result in inadequate emergency access. The section also analyzes the potential impacts of the project based on CEQA Guidelines Section 15064.3(b), which focuses on newly adopted criteria (VMT) for determining the significance of transportation impacts. Pursuant to SB 743, the focus of transportation analysis has changed from level of service or vehicle delay to VMT. The City does not currently have VMT analysis guidelines; therefore, for the purposes of this section, the Governor's Office of Planning and Research Technical Advisory on Evaluating Transportation Impacts in CEQA (OPR 2018) has been used, as well as the Los Angeles County Public Works Transportation Impact Analysis Guidelines (County of Los Angeles 2020).

a) Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Less-than-Significant Impact. The project would not conflict with applicable programs, plans, ordinances, or policies addressing the circulation system, as further discussed below. This includes the City General Plan (City of Norwalk 1996), the City's Bicycle Master Plan (City of Norwalk 2020), and the existing and proposed roadway, pedestrian, bicycle, and transit facilities and services in the study area.

General Plan Circulation Element

The Circulation Element addresses the circulation improvements needed to relieve traffic congestion due to future land uses in the City. It also addresses potential demand management strategies and transit services. Corresponding goals and policies have been adopted to ensure that all components of the circulation system will meet the goals of the City (City of Norwalk 1996). The following goals are relevant to the project:

- Goal 2: A network of regional transportation facilities which ensure the safe and efficient movement of people and goods from within the City to areas outside its boundaries and which accommodates the regional travel demands of developing areas outside the city.
- Goal 4: An efficient public transportation system that provides mobility to all City residents, employees, and visitors.
- Goal 5: An efficient bicycle and pedestrian circulation system that encourages these alternative forms of transportation.
- Goal 6: Ensure that development of Class II bike lanes provides for the safe and efficient travel of both bicycles and vehicular traffic.
- Goal 8: A truck circulation system that provides effective transport of commodities while minimizing the negative impacts throughout the City.

Norwalk Bicycle Master Plan

The City has prepared a citywide Bicycle Master Plan that establishes the City's vision and comprehensive approach to improving biking in Norwalk. The Bicycle Master Plan lays out the steps for the City to promote and enhance biking in Norwalk. As a comprehensive action plan, the Bicycle Master Plan offers improvement projects, programs, and policies intended to encourage biking throughout Norwalk. This plan identifies facility needs that will enhance the safety and comfort of biking for every resident, employee, and visitor of Norwalk (Kittelson & Associates 2022). The goals and objectives of the plan are as follows:

- Provide safe, direct, and comfortable bike routes
- Improve safety for bicyclists
- Promote biking and encourage people to bike in Norwalk, improving community health and identity

Transit, Bicycle, and Pedestrian Facilities

Public transportation in the City is provided primarily by Norwalk Transit System (NTS) and the Los Angeles County Metropolitan Transportation Authority (Metro). Figure 5, Existing Transit Facilities, shows the various bus routes that provide service in the study area.

NTS operates fixed-route and paratransit service (a transit option for individuals who, due to disabilities, are unable to ride other NTS fixed-route buses) in Los Angeles County and serves the City of Norwalk and portions of Artesia, Bellflower, Cerritos, El Monte, La Mirada, Santa Fe Springs, South El Monte, La Habra, Whittier, and unincorporated areas of Los Angeles County (NTS 2024). The project site is served by NTS Route 3, a north–south route that runs along Norwalk Boulevard, connecting Tracy High School, Norwalk Public Library, John Glen High School, the Civic Center and Norwalk Transportation Center, Santa Fe High School and Santa Fe Springs City Hall, and Gateway Plaza. The nearest bus stop to the site is provided on Norwalk Boulevard and 161st Street, approximately 0.2 miles east of the project site. Metro Route 128 also serves the site and runs along Alondra Boulevard, connecting the Compton Station/MLK Transit Center, Bellflower, Paramount, Norwalk, and Cerritos. The nearest Metro bus stop is provided on Alondra Boulevard and Elaine Avenue, approximately 0.12 miles north of the project site (Metro 2024).

Existing bike lanes within the City are shown in Figure 6. There are a limited number of bikeways in and around the City at this time and the network is generally disconnected. The nearest bicycle facility to the project site is a Class II bike lane (on-street painted lane) on Bloomfield Avenue, between Alondra Boulevard and 166th Street, approximately 0.7 miles east of the site. The Bicycle Master Plan recommends implementing a comprehensive network throughout the City, including proposed facilities on Alondra Boulevard, Pioneer Boulevard, 166th Street, and Norwalk Boulevard near the project site. The recommended facilities are shown on Figure 7, City of Norwalk Planned Bikeways.

The City is well served by sidewalks, with relatively few gaps in the sidewalk network. Sidewalks are present along most of the roads within the vicinity of the site.

Impact Analysis

The project entails constructing and operating a stormwater capture, treatment, and infiltration facility within the northern portion of Hermosillo Park, as well as implementing a comprehensive park rehabilitation project to replace existing park features with improved amenities that will be similar in nature to the existing features.

Construction

The project would result in a temporary, short-term increase in traffic during construction. This includes construction workers arriving to and from the project site and the delivery of large construction equipment and hauling trips to the site as needed. The total duration of project construction is anticipated to be 24 months, with some phases overlapping. Typical construction work hours would be Monday through Friday, 7:00 a.m. to 7:00 p.m. Night work is not anticipated. Table 3.17-1 details the potential daily and peak hour trip estimates during the peak construction phase, which is assumed to occur during the reservoir excavation phase. As shown in Table 3.17-1, the project would generate 70 daily trips, 17 AM peak hour trips, and 17 PM peak hour trips during the peak construction period. This is equivalent to 166 daily

passenger car equivalent trips, 30 AM peak hour passenger car equivalent trips and 30 PM peak hour passenger car equivalent trips.

Table 3.17-1. Project Trip Generation (Peak Construction)

Vehicle Type	Daily Trips	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Trip Generation							
Workforce Trips[1]	20	10	0	10	0	10	10
Vendor Trucks[2]	4	1	0	1	0	1	1
Heavy Haul Trucks[2]	46	6	0	6	0	6	6
Total	**70**	**17**	**0**	**17**	**0**	**17**	**17**
Trip Generation w/PCE							
Workers (1.0 PCE)	20	10	0	10	0	10	10
Vendor Trucks (2.0 PCE)[3]	8	2	0	2	0	2	2
Haul Trucks (3.0 PCE)[3]	138	18	0	18	0	18	18
Total (w/PCE)	**166**	**30**	**0**	**30**	**0**	**30**	**30**

Notes: PCE = passenger car equivalence.

1 Conservatively assumes all construction workers arrive in the AM peak hour and depart the site in the PM peak hour.

2 Vendor and Haul trucks are assumed to arrive and depart the site evenly throughout the workday.

3 Vendor trucks were estimated to have an approximately 2.0 PCE adjusted value, while haul trucks were estimated to have an approximately 3.0 PCE adjusted value.

Regional access to the park is provided from Interstate (I) 605, which is approximately 1.5 miles to the west; I-5, which is approximately 1.5 miles northeast of the site; and SR-91, which is approximately 0.5 miles to the south. The City has an existing truck route system in order to accommodate truck traffic and encourage trucks to use roadways where their impacts on residential and congested areas will be minimal. The existing designated truck routes are presented in Figure 8. The truck routes near the site include the entire length of Alondra Boulevard, which provides direct access to I-605; the entire length of Pioneer Boulevard within the City limits, which provides access to I-5 via Imperial Highway (also a designated truck route); and Norwalk Boulevard between Alondra Boulevard on the north and 166th Street on the south (SCAG 2022). South of 166th Street, within the City of Cerritos, southbound Norwalk Boulevard is a designated truck route between 166th Street and Artesia Boulevard, with direct access to SR-91. Due to the nominal and temporary increase in construction traffic (approximately 30 trips during each peak hour), any effect on the operations of roadways or the overall circulation system along these roads would be minimal.

Local construction access would be provided from the south along 162nd Street. Temporary equipment staging and construction trailers would be established within the existing park boundary, with no additional off-site staging anticipated to be needed. Construction would require temporary work in Algardi Street and Horst Avenue, including pavement removal, trench excavation, pipe and vault installation, and pavement resurfacing. Portions of traffic lanes would be closed during construction. No full road closures are anticipated, and access to residential driveways would be maintained at all times. Once construction traffic exits 162nd Street, the construction related truck traffic will have direct access to the freeways noted above, via the City's designated truck routes.

To minimize potential impacts during construction, the project would implement a traffic control plan to be prepared by the contractor and approved by the City Engineer. The traffic control plan would include measures such as identifying the proposed truck routes, minimizing and/or avoiding truck travel during peak hours, using flaggers for local site access, and other measures. All lane closures would be performed pursuant to the traffic control plan. With implementation of the traffic control plan, the potential impact to residential neighborhoods would be minimized and there would be no changes that would affect the safety and accessibility of the transportation system. The park would be closed for the duration of construction; therefore, the existing pedestrian facilities within the park would be closed. The nearest bicycle facility to the project site is a Class II bike lane on Bloomfield Avenue, between Alondra Boulevard and 166th Street, approximately 0.7 miles east of the site. The nearest bus stop is provided on Norwalk Boulevard and 161st Street, approximately 0.2 miles east of the project site. The temporary and minimal increase in construction related traffic would not interfere with existing public transit, bicycle, or pedestrian facilities. Impacts would be less than significant.

Operations

Once construction is complete, project operation is anticipated to entail routine maintenance performed by the City at the stormwater capture facility and other park features. The proposed park rehabilitation would replace all existing amenities at Hermosillo Park with improved features that would allow for similar active and passive recreation uses as under existing conditions, but with an enhanced experience for park users. The project would remove and replace the two existing multi-use grass fields with new field surfaces (either new grass or artificial turf, subject to final project design). The City intends to make the fields available for organized recreational league play, with periods of open availability to the general public. Each field would accommodate either a single soccer field layout for adult and older youth league play or two smaller fields for younger youth league play. The project would remove the existing outdoor full-court basketball court and replace it with one full-court and one half-court basketball court. The existing four-court handball structure would be replaced with a new three-court structure. The amphitheater and outdoor community event space would be replaced by a similar feature and relocated to the existing grass field area east of the existing fountain, which would be demolished and removed. The existing 3,100 square-foot community center would be demolished and reconstructed with a new 8,500 square foot building. The building would include a multipurpose room for community event rentals and City public programs, a Recreation and Park Services Department staff office space, a new police substation, a storage room, and a restroom. The park office would house one staff member and the police substation would house two staff members. The estimated occupancy of the new building would be 208 people, an increase from the existing building's capacity of 80. Public use of the community center would be similar to that of the existing building. The expanded parking lot is anticipated to accommodate the increase in park use and activity without causing greater reliance on street parking in the adjacent residential neighborhood.

Based on the proposed park improvements, the project is estimated to generate a net increase of 397 daily trips, 13 AM peak hour trips and 71 PM peak hour trips during a typical weekday. During a typical Saturday, park use is expected to increase, and the project is estimated to generate a net increase of 1,502 daily trips and 140 peak hour trips. The estimated weekday project trip generation is presented in Table 3.17-2 and the estimated Saturday project trip generation is presented in Table 3.17-3.

Table 3.17-2. Weekday Project Trip Generation (Operations)

Land Use	Units	Daily	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total

Notes: TSF = thousand square feet.

1 Trip rates from ITE 2021.

2 A recreational community center is described as a stand-alone public facility similar to a YMCA. These facilities often include classes, a day care, meeting rooms, swimming pools, tennis, basketball courts, athletic fields, and a restaurant or snack bar. Therefore, this rate is considered conservative compared with what is being proposed at the park. It is also assumed that the trips associated with the racquetball and basketball courts are captured in this rate. Therefore, the trips for these land uses are not calculated separately.

3 A 10% trip reduction factor is applied to capture the potential park users who will walk or bike to the site.

Net New Trips with Trip Reduction		**1,502**	**68**	**73**	**140**

Notes: TSF = thousand square feet.

1 Trip rates from ITE 2021.

2 A recreational community center is described as a stand-alone public facility similar to a YMCA. These facilities often include classes, a day care, meeting rooms, swimming pools, tennis, basketball courts, athletic fields, and a restaurant or snack bar. Therefore, this rate is considered conservative compared with what is being proposed at the park. It is also assumed that the trips associated with the racquetball and basketball courts are captured in this rate. Therefore, the trips for these land uses are not calculated separately.

3 A 10% trip reduction factor is applied to capture the potential park users who will walk or bike to the site.

Hermosillo Park is served by multiple existing roads, including Alondra Boulevard, Norwalk Boulevard, Pioneer Boulevard, 162nd Street, and numerous local residential streets surrounding the site. Park users would also be served by the existing transit and pedestrian facilities near the site. On the park's eastern and western sides, Algardi Street and 161st Street feature cul de sacs that abut the park, with gates providing pedestrian access but no vehicle access. Similar pedestrian access is available from a Cobos Street cul de sac on the park's northern side. The existing perimeter walking path would be replaced in place, maintaining the pedestrian access points from the north, west, and east sides. All pedestrian areas within the project site would meet Americans with Disabilities Act requirements and adhere to City design guidelines.

The project would not include site improvements that would extend into the public right-of-way or interfere with the existing roadway network, public transit, bicycle, or pedestrian facilities or impede the construction of new or the expansion of existing facilities in the future. Bicyclist and pedestrian safety would be maintained at existing levels in the area. The project would also not severely delay, impact, or reduce the service level of transit in the area.

Therefore, the proposed project would not conflict with the circulation policies within the City's General Plan or the City's Bicycle Master Plan, including the City's ability to provide a network of regional transportation facilities that ensure the safe and efficient movement of people and goods; an efficient public transportation system that provides mobility to all City residents, employees, and visitors; an efficient bicycle and pedestrian circulation system that encourages these alternative forms of transportation; and the ability to ensure that development of Class II bike lanes provides for the safe and efficient travel of both bicycles and vehicular traffic. Impacts would be less than significant.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less-than-Significant Impact. CEQA Guidelines Section 15064.3(b) focuses on VMT for determining the significance of transportation impacts. It is further divided into four subdivisions: (1) land use projects, (2) transportation projects, (3) qualitative analysis, and (4) methodology. The updated CEQA Guidelines state that "generally, VMT is the most appropriate measure of transportation impacts," and define VMT as "the amount and distance of automobile travel attributable to a project" (14 CCR 15064.3[a]). "Automobile" refers to on-road passenger vehicles, specifically cars and light trucks. The Governor's Office of Planning and Research has clarified in its Technical Advisory (OPR 2018) that heavy-duty truck VMT is not required to be included in the estimation of a project's VMT.

Construction

The project is not a land use or transportation project; the project would not result in a major expansion of Hermosillo Park. Therefore, neither Section 15064.3(b)(1) nor Section 15064.3(b)(2) of the CEQA Guidelines apply. Instead, the project would be categorized under Section 15064.3(b)(3), suitable for qualitative analysis and not subject to a quantitative threshold.

The project would involve construction that would generate temporary construction-related traffic for approximately 24 months. Even though worker and vendor trips would generate VMT, once construction is completed, the construction-related traffic would cease, and traffic would return to pre-construction conditions. Measures to reduce the VMT generated by workers and trucks are limited, and there are no thresholds or significance criteria for temporary, construction-related VMT. The increase in VMT associated with the projects' construction is expected to be temporary and would therefore not cause a significant VMT impact.

Operations

Once construction is complete, project operations are anticipated to entail routine maintenance activities at the stormwater capture facility performed by City staff. The proposed park improvements would result in a net increase in weekday and weekend trips, primarily due to the new soccer fields and larger community center. However, Hermosillo Park is an existing neighborhood park, and the intent of the project is to implement a park rehabilitation project to replace existing park features with improved amenities that will be similar in nature to the existing features. While the proposed project would broaden and update the recreational opportunities for the residents of Norwalk, the park would continue to serve the local community and is not anticipated to increase VMT. Local serving projects, such as the project, generally redistribute trips rather than creating new trips. By adding enhanced local recreational opportunities into the community and thereby improving proximity, local serving projects tend to shorten trips and reduce VMT. The County of Los Angeles Parkland Standard and Classifications define a neighborhood park as having 3–10 acres with a service area of 0.5 miles which is consistent with the characteristics of Hermosillo Park (County of Los Angeles 2017). The majority of patrons that will utilize these facilities are from the surrounding residential neighborhoods, and therefore not anticipated to increase VMT. Therefore, the project would have a less than significant impact on VMT and would not conflict or be inconsistent with CEQA Guidelines Sections 15064.3(b)(1) and 15064.3(b)(3).

c) Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Construction

Less-than-Significant Impact. Access (ingress and egress) for construction-related traffic (workers and trucks) to the site would be from 162nd Street. Construction would also require temporary work in Algardi Street and Horst Avenue and portions of traffic lanes would be closed. No full road closures are anticipated. The project would implement a traffic control plan to be prepared by the contractor and approved by the City Engineer. All lane closures would be performed pursuant to the traffic control Plan. With implementation of the traffic control plan, the potential impact to residential neighborhoods would be minimized and there would be no changes that would affect the safety and accessibility of the transportation system. All of Hermosillo Park is expected to be closed to the public for the duration of project construction, which would also minimize unnecessary vehicular, pedestrian, or bicycle traffic to the site. Therefore, impacts associated with hazardous design features or incompatible land uses would be less than significant.

Operations

Less-than-Significant Impact. Access to the site would be provided from existing City streets and from the existing park driveway on 162nd Street. A second access driveway on 162nd Street would also be constructed. There would be no changes to the existing off-site circulation on City roads. Access from the new driveway would be designed to City standards for sight distance and other safety concerns, similar to the existing access point. Therefore, the project would not substantially increase hazards due to a roadway design feature or introduce incompatible uses. Impacts would be less than significant.

d) Would the project result in inadequate emergency access?

Construction

Less-than-Significant Impact. The project site is located in an established, developed area with sufficient access for emergency service providers. Construction would require temporary work in Algardi Street and Horst Avenue, which would require closing portions of the travel lanes. However, construction activities would occur on the project site and no full road closures in the public right-of-way or driveway closures are anticipated that would impact adopted emergency access or response plans. As part of the traffic control plan, the contractor would follow standard construction practices and ensure that adequate on-site circulation and access is always maintained for all users, including coordinating with local emergency response providers (local police, fire, and medical dispatch) regarding proposed construction activities. As such, the project would have a less-than-significant impact related to emergency access.

Operations

Less-than-Significant Impact. As previously discussed, the project site is located in an established, developed area with sufficient access for emergency service providers. The project is constructing a secondary access to the park on 162 Street, which would provide additional access for emergency service providers if needed. No other changes to operational site access would occur as part of this project. As such, there would be no impacts to emergency access.

3.18 Tribal Cultural Resources

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. TRIBAL CULTURAL RESOURCES				
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☐	☐	☐	☐
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☐	☐

The evaluation of potential impacts to tribal cultural resources (TCRs) is based on the findings resulting from tribal consultation conducted by the City, as the lead agency, as well as the findings of Section 3.5, Cultural Resources, in this MND. Background research conducted to inform this analysis include a NAHC SLF search, archival research and CHRIS database records search, and the results of formal tribal consultation completed by the City pursuant to California AB 52.

Assembly Bill 52

AB 52 of 2014 amended PRC Section 5097.94 and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. AB 52 established that TCRs must be considered under CEQA and also provided for additional Native American consultation requirements for the lead agency. PRC Section 21074 describes a TCR as a site, feature, place, cultural landscape, sacred place, or object that is considered of cultural value to a California Native American Tribe. A TCR is either:

- On the CRHR or a local historic register
- Eligible for the CRHR or a local historic register
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1

AB 52 formalizes the lead agency–tribal consultation process, requiring the lead agency to initiate consultation with California Native American groups that are traditionally and culturally affiliated with the project area, including tribes that may not be federally recognized. Lead agencies are required to begin consultation prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report by contacting those tribal groups who have previously provided formal written request for notification of projects under the agency's jurisdiction.

Section 1(a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment." Effects on TCRs should be considered under CEQA. Section 6 of AB 52 adds Section 21080.3.2 to the PRC, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource." Further, if a California Native American tribe requests consultation regarding project alternatives, mitigation measures, or significant effects to TCRs, the consultation shall include those topics (PRC Section 21080.3.2[a]). Finally, the environmental document on which the tribal consultation is focused, as well as the mitigation monitoring and reporting program (where applicable), developed in consideration of information provided by tribes during the formal consultation process, shall include any mitigation measures that are adopted (PRC Section 21082.3[a]).

The project is subject to compliance with AB 52 (PRC Section 21074), which requires consideration of impacts to TCRs as part of the CEQA process and that the lead agency notify California Native American tribal representatives (that have requested notification) who are traditionally or culturally affiliated with the geographic area of the proposed project. All NAHC-listed California Native American tribal representatives identified on the NAHC contact list were sent letters from the City on February 9, 2024, via U.S. Postal Service mailing. The notification letters contained a project description, outline of AB 52 timing, an invitation to consult, a project site plan, and contact information for the appropriate lead agency representative. Table 3.18-1 summarizes the results of the AB 52 and consultation efforts for the project thus far.

Table 3.18-1. Assembly Bill 52 Native American Tribal Outreach Results

Native American Tribal Representatives	Consultation Record
Christina Swindall Martinez, Secretary Gabrieleño Band of Mission Indians–Kizh Nation (Kizh Nation)	No response has been received to date.
Andrew Salas, Chairperson Gabrieleño Band of Mission Indians–Kizh Nation (Kizh Nation)	**February 20, 2024** Email from Mr. Salas to the City acknowledging receipt of AB 52 notification letter for the project and requesting a consultation. Consultation is ongoing
Anthony Morales, Chairperson Gabrieleno/Tongva San Gabriel Band of Mission Indians	No response has been received to date.
Sandonne Goad, Chairperson Gabrielino/Tongva Nation	No response has been received to date.
Robert Dorame, Chairperson Gabrielino Tongva Indians of California Tribal Council	No response has been received to date.

Table 3.18-1. Assembly Bill 52 Native American Tribal Outreach Results

Native American Tribal Representatives	Consultation Record
Christina Conley, Cultural Resource Administrator Gabrielino Tongva Indians of California Tribal Council	No response has been received to date.
Charles Alvarez, Chairperson Gabrielino/Tongva Tribe	No response has been received to date.
Sam Dunlap, Cultural Resource Director Gabrielino/Tongva Tribe	No response has been received to date.
Joyce Perry, Cultural Resource Director Juaneño Band of Mission Indians Acjachemen Nation - Belardes	No response has been received to date.
Heidi Lucero, Chairperson Juaneño Band of Mission Indians Acjachemen Nation 84A	No response has been received to date.
Lovina Redner, Tribal Chair Santa Rosa Band of Cahuilla Indians	No response has been received to date.
Joseph Ontiveros, Tribal Historic Preservation Officer Soboba Band of Luiseño Indians	No response has been received to date.
Jessica Valdez, Cultural Resource Specialist Soboba Band of Luiseño Indians	No response has been received to date.

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a) ***Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?***

As discussed in Section 3.5 of this MND, the SCCIC records search, NAHC SLF search, archival review, and pedestrian survey did not identify any cultural resources in the project site. A review of the historic aerials reveals that the project site has undergone ground disturbing activities from its past use as an agricultural/ranching area and its transition into a park in the 1980s (NETR 2024).

Under AB 52, TCRs are defined as resources that are determined eligible for or listed in the CRHR. The City reached out to the California Native American tribal representatives that have requested notification and are traditionally or culturally affiliated with the geographic area on February 9, 2024. A response was received from the Kizh Nation February 20, 2024, requesting AB 52 consultation for the project. AB 52 consultation is currently ongoing. [Pending results of AB52 consultation meetings.]

b) ***A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.***

[Pending results of AB52 consultation meetings.]

3.19 Utilities and Service Systems

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. UTILITIES AND SERVICE SYSTEMS – Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☐	☒
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☐	☒

a) ***Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?***

Less-than-Significant Impact. The project includes the construction of a stormwater capture and filtration facility and improvements to the existing Hermosillo Park. The proposed stormwater facility would intercept stormwater from the existing storm drain channel beneath the park and in Horst Avenue, where it would be

allowed to infiltrate into underlying soils or would be treated and discharged back into the storm drain channel. The proposed pump associated with the treatment facility would be electrically powered, thus requiring an additional connection to the electrical power that currently serve the park's lights and irrigation system. Connection to these existing distribution facilities would be sufficient for providing power to the project and would not require any other relocation or construction of electrical power facilities. The project would also require reconstruction of minor existing water infrastructure in the removal and replacement of the existing irrigation pipes and sprinkler heads. These minor improvements would be subject to engineering design to ensure adjacent facilities and users are not negatively affected. Any relocation of existing facilities would not be substantial enough to result in a significant impact pursuant to CEQA. Impacts would be less than significant.

b) Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Less-than-Significant Impact. Project construction would temporarily require a minor amount of water, primarily associated with site watering in compliance with SCAQMD Rule 403 to prevent, reduce, or mitigate fugitive dust emissions from construction activities. Once construction is complete, operational changes in water use would include the minor irrigation changes and the replacement community center building (which would contain modern water-efficient fixtures). Other existing components of the park that require water would not change their existing usage. As such, operation of the project would not demand additional water use. Therefore, impacts would be less than significant.

c) Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

No Impact. Construction and operation of the project would not generate wastewater demand. The proposed restroom would replace the existing facility. Therefore, no impacts would occur.

d) Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Less-than-Significant Impact. During construction, the project would generate solid waste such as residual wastes, plastics, and soils. Construction-generated solid waste would be temporary and would cease once construction is completed. Solid waste generated by project construction would be properly disposed of at designated landfill facilities for construction and demolition debris. Further, the City would comply with City Code of Ordinances Chapter 8.48 Article X, Waste Management Plan for Construction and Demolition, which requires covered projects to prepare and submit a waste management plan to the Waste Management Plan Compliance Office; noncovered projects must divert at least 65% of project-related construction and demolition debris. Operation of the project would not generate any substantial additional solid waste beyond current park conditions. In 2011, California AB 341 was passed, establishing a state goal to reduce, recycle, or compost no less than 75% of waste generated by the year 2020. Norwalk residents are asked to participate fully in the program by recycling all products that are recyclable (City of Norwalk 2024). As such, solid waste generated by the project would not exceed state or local standards or the capacity of local infrastructure. Impacts would be less than significant.

e) Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

No Impact. As discussed in Section 3.19(d), construction-generated solid waste would be temporary, and operation of the project would not generate substantially more solid waste than existing conditions. Solid waste generated by the project construction would be disposed of at designated landfill facilities under federal, state, and local regulation. Additionally, the project would be required to adhere to City and county ordinances with respect to waste reduction and recycling. As a result, no impacts related to state and local statutes governing solid waste are anticipated.

3.20 Wildfire

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XX. WILDFIRE – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

a) Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

Less-than-Significant Impact. According to the California Department of Forestry and Fire Protection Fire Hazard Severity Zone Viewer, the project site is not located within a Very High Fire Hazard Severity Zone (CAL FIRE 2023). The City has prepared a Local Hazard Mitigation Plan. The hazard mitigation plan is a document that contains information reduce risks from disasters to the people, property, economy, and environment within the City (City of Norwalk 2022). Construction would require temporary work in Algardi Street and Horst Avenue, including pavement removal, trench excavation, pipe and vault installation, and pavement resurfacing. Portions of traffic lanes would be closed during construction. All road closure would

be performed pursuant to a traffic-control plan prepared by the contractor and approved by the City Engineer. Access to residential driveways would be maintained at all times. Traffic on Algardi Street and Horst Avenue would resume to existing conditions upon completion of the project. Impacts would be less than significant.

b) Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less-than-Significant Impact. Construction of the project would comply with Chapter 15.08 of the City's Municipal Code, which adopts the CFC by reference. Chapter 33 of the CFC outlines general fire safety precautions during construction and demolition that are intended to maintain minimum levels of fire protection and limit the spread of fire. The project would not include structures intended for long-term occupancy. Furthermore, the project site is relatively flat and would not influence prevailing winds or other factors that could exacerbate wildfire risk. As such, the project would not exacerbate wildfire risks such that project users would be exposed to pollutants concentrations. Impacts would be less than significant.

c) Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Less-than-Significant Impact. As discussed previously, the project overall would not exacerbate fire risk. Construction would comply with CFC requirements to manage and minimize fire risk during construction. Operation of the project would not contain potential sources for fire risk. As such, the project would not result in installation or maintenance of associated infrastructure that may exacerbate fire risk. Impacts would be less than significant.

d) Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less-than-Significant Impact. For reasons described previously in Sections 3.9(g) and 3.20(a), (b), and (c), the project would not pose a substantial risk for wildfire. The project would be located on relatively flat land within Hermosillo Park. As such, implementation of the project would not expose people or structures to significant risks from post-fire slope instability or drainage changes. Impacts would be less than significant.

3.21 Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant Impact With Mitigation Incorporated	Less Than Significant Impact	No Impact
XXI. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☐	☒	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less-than-Significant Impact with Mitigation Incorporated**.** Potential impacts related to sensitive and special-status habitat, wildlife species, and plant species are discussed in Section 3.4, Biological Resources. As discussed in Section 3.4, all potentially significant impacts to biological resources would be reduced to a level below significance with incorporation of mitigation measures. The proposed project would not substantially degrade the quality of the environment or impact fish or wildlife species or plant communities. As discussed in Section 3.5, potential impacts to cultural resources would be reduced to a level below significance with incorporation of mitigation measures. The proposed project would not eliminate important examples of the major periods of California history or prehistory. Overall, impacts would be less than significant with incorporation of mitigation measures.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Less-than-Significant Impact with Mitigation Incorporated. As indicated in the analysis presented throughout Chapter 3, Initial Study Checklist, of this MND, the proposed project would not result in significant and unavoidable impacts in any issue area. Mitigation measures would reduce impacts to below a level of significance.

Cumulative projects in the City include the Alondra Maidstone Mixed Use Project, located at 11600 Alondro Boulevard, and The Views, a multi-family residential development project, located at 14807 Pioneer Boulevard, as well as various other small, capital improvement projects occurring in the vicinity such as XX. The project is not located in the immediate vicinity of any large cumulative projects whose construction phase would overlap to create cumulative impacts. The proposed project, as with potential cumulative projects, would incorporate mitigation measures to reduce impacts, as applicable, particularly during construction. Upon completion of construction, the proposed project would have no potential to contribute to a cumulative impact. Impacts would be less than significant with incorporation of mitigation measures.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less-than-Significant Impact with Mitigation Incorporated. The potential for adverse direct or indirect impacts to human beings was considered throughout Chapter 3 of this MND. Based on this evaluation, there is no substantial evidence that construction or operation of the project with the proposed mitigation measures incorporated would result in a substantial adverse effect on human beings. Impacts would be less than significant with incorporation of mitigation measures.

LEGEND

KEY DESCRIPTION

1.0 PARK FEATURES

- 1.1 UPPER TERRACE FOR GROUP GATHERINGS & SPECTATORS
- 1.2 AMPHITHEATRE AND COMMUNITY EVENT SPACE
- 1.3 WALKING PATHS (LIGHTED)
- 1.4 SPLASH PAD
- 1.5 PICNIC TABLE
- 1.6 BIKE RACK
- 1.7 DRINKING FOUNTAIN
- 1.8 LITTER RECEPTACLE
- 1.9 ENTRY MONUMENT
- 1.10 TREE WELL
- 1.11 OUTDOOR PLAZA
- 1.12 GROUP BBQ FACILITIES

2.0 PLAYGROUND

- 2.1 EXISTING PLAY EQUIPMENT & PLAY SURFACING TO REMAIN
- 2.2 PORTION OF EXISTING PLAYGROUND TO ADJUSTED ACCOMMODATE SOCCER PITCH

3.0 FIELD SPORTS

- 3.1 SOCCER PITCH - 2 NATURAL TURF FIELDS (U19)
- 3.2 SOCCER PITCH (OVERLAY) - 4 FIELDS (U8)
- 3.3 30' HIGH SPORTS NETTING
- 3.4 SPORTS FIELD LIGHTING
- 3.5 CONCRETE BLEACHER SEATING

4.0 SPORT COURTS

- 4.1 BASKETBALL COURT (1 - FULL COURT & 1- 1/2 COURT)
- 4.2 HANDBALL COURTS (3- COURTS)

5.0 BUILDINGS & STRUCTURES

- 5.1 COMMUNITY CENTER (8500 SF)
  TOTAL ESTIMATED OCCUPANCY LOAD: 208 PEOPLE
  MULTI-PURPOSE ROOM: 3970 SF
  STAFF OFFICE SPACE: 280 SF
  POLICE SUB-STATION: 240 SF
  RESTROOM (MEN & WOMEN): 1225 SF
  STORAGE: 670 SF
- 5.2 SHADE CANOPY (3800 SF)
  (TENSILE FABRIC TYPE STRUCTURE)

6.0 PEDESTRIAN CIRCULATION

- 6.1 PAVED WALKWAYS (MINIMUM 8' WIDE)
- 6.2 EXERCISE PATH WITH TRAIL MARKERS - .4 MILE LOOP
- 6.3 EXISTING PERIMETER WALK TO REMAIN
- 6.4 PEDESTRIAN CROSSING

7.0 VEHICULAR CIRCULATION

- 7.1 EXPANDED PARKING LOT (NET GAIN: 135 SPACES)
- 7.2 EXISTING PARKING LOT ENTRY & EXIT TO REMAIN
- 7.3 NEW PARKING LOT ENTRY & EXIT

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2024) - Unmitigated

3.2. Demolition (2024) - Mitigated

3.3. Site Preparation (2024) - Unmitigated

3.4. Site Preparation (2024) - Mitigated

3.5. Reservoir Excavation (2024) - Unmitigated

3.6. Reservoir Excavation (2024) - Mitigated

3.7. Reservoir Excavation (2025) - Unmitigated

3.8. Reservoir Excavation (2025) - Mitigated

3.9. Field Surface Replacement (2025) - Unmitigated

3.10. Field Surface Replacement (2025) - Mitigated

3.11. Reservoir Construction (2025) - Unmitigated

3.12. Reservoir Construction (2025) - Mitigated

3.13. Pipe/Diversion/Treatment Facility (2025) - Unmitigated

3.14. Pipe/Diversion/Treatment Facility (2025) - Mitigated

3.15. Upper Terrace/Bleacher Construction (2025) - Unmitigated

3.16. Upper Terrace/Bleacher Construction (2025) - Mitigated

3.17. Upper Terrace/Bleacher Construction (2026) - Unmitigated

3.18. Upper Terrace/Bleacher Construction (2026) - Mitigated

3.19. Community Center Construction (2026) - Unmitigated

3.20. Community Center Construction (2026) - Mitigated

3.21. Courts/Splash Pad/Amphitheater Construction (2026) - Unmitigated

3.22. Courts/Splash Pad/Amphitheater Construction (2026) - Mitigated

3.23. Concrete Pathway Construction (2026) - Unmitigated

3.24. Concrete Pathway Construction (2026) - Mitigated

3.25. Ancillary Park Improvements (2026) - Unmitigated

3.26. Ancillary Park Improvements (2026) - Mitigated

3.27. Parking Lots (2026) - Unmitigated

3.28. Parking Lots (2026) - Mitigated

3.29. Architectural Coating (2026) - Unmitigated

3.30. Architectural Coating (2026) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.1. Unmitigated

4.3.2. Mitigated

4.4. Water Emissions by Land Use

4.4.1. Unmitigated

4.4.2. Mitigated

4.5. Waste Emissions by Land Use

4.5.1. Unmitigated

4.5.2. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Hermosillo Park Stormwater Capture Project
Construction Start Date	8/15/2024
Operational Year	2027
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	1.80
Precipitation (days)	8.00
Location	11959 162nd St, Norwalk, CA 90650, USA
County	Los Angeles-South Coast
City	Norwalk
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4886
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

City Park	6.00	Acre	6.00	0.00	261,360	261,360	—	—
Parking Lot	154	Space	1.39	0.00	0.00	—	—	—
Other Non-Asphalt Surfaces	131	1000sqft	1.41	0.00	0.00	—	—	—
General Office Building	8.50	1000sqft	0.20	8,500	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	10.4	annual days of extreme heat
Extreme Precipitation	4.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	42.6
AQ-PM	74.9
AQ-DPM	38.1
Drinking Water	66.2
Lead Risk Housing	75.5
Pesticides	0.00
Toxic Releases	90.7
Traffic	83.0
Effect Indicators	—
CleanUp Sites	5.69
Groundwater	59.6
Haz Waste Facilities/Generators	50.5
Impaired Water Bodies	0.00

Solid Waste	0.00
Sensitive Population	—
Asthma	40.5
Cardio-vascular	65.3
Low Birth Weights	39.0
Socioeconomic Factor Indicators	—
Education	85.4
Housing	64.8
Linguistic	74.8
Poverty	47.8
Unemployment	86.2

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	30.41190812
Employed	40.65186706
Median HI	53.75336841
Education	—
Bachelor's or higher	13.64044655
High school enrollment	100

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	69.0
Healthy Places Index Score for Project Location (b)	36.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	9-acre total park including 8,500 sf community building (modeled as General Office), courts/sidewalks, and 154 space parking lot
Construction: Construction Phases	Adjusted the construction phases and duration based on the Project Description
Construction: Off-Road Equipment	Adjusted default equipment mix based on Project Description
Construction: Trips and VMT	Rounded trips up to nearest even number. Added vendor trips to account for water trucks during site preparation and grading. Also added vendor and haul trucks during reservoir construction and pipeline/diversion/treatment facility phases to account for precast concrete and other structural/material import.
Operations: Vehicle Data	Adjusted trip rates based on traffic trip gen estimates for the proposed land uses

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	10.4	annual days of extreme heat
Extreme Precipitation	4.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—

AQ-Ozone	42.6
AQ-PM	74.9
AQ-DPM	38.1
Drinking Water	66.2
Lead Risk Housing	75.5
Pesticides	0.00
Toxic Releases	90.7
Traffic	83.0
Effect Indicators	—
CleanUp Sites	5.69
Groundwater	59.6
Haz Waste Facilities/Generators	50.5
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	40.5
Cardio-vascular	65.3
Low Birth Weights	39.0
Socioeconomic Factor Indicators	—
Education	85.4
Housing	64.8
Linguistic	74.8
Poverty	47.8
Unemployment	86.2

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	30.41190812
Employed	40.65186706
Median HI	53.75336841
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	69.0
Healthy Places Index Score for Project Location (b)	36.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	9-acre total park including 3,100 sf community building (modeled as General Office), courts/sidewalks, and 19 space parking lot
Construction: Construction Phases	Adjusted the construction phases and duration based on the Project Description
Construction: Off-Road Equipment	Adjusted default equipment mix based on Project Description
Construction: Trips and VMT	Rounded trips up to nearest even number. Added vendor trips to account for water trucks during site preparation and grading. Also added vendor and haul trucks during reservoir construction and pipeline/diversion/treatment facility phases to account for precast concrete and other structural/material import.
Operations: Vehicle Data	Adjusted trip rates based on traffic trip gen estimates for the existing land uses

Parking Lots	0.00	0.00	0.00	0.00	2.80

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
City Park	0.00	0%
Parking Lot	1.39	100%
Other Non-Asphalt Surfaces	1.41	0%
General Office Building	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2024	0.00	532	0.03	< 0.005

2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	10.4	annual days of extreme heat
Extreme Precipitation	4.50	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score

Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	42.6
AQ-PM	74.9
AQ-DPM	38.1
Drinking Water	66.2
Lead Risk Housing	75.5
Pesticides	0.00
Toxic Releases	90.7

Traffic	83.0
Effect Indicators	—
CleanUp Sites	5.69
Groundwater	59.6
Haz Waste Facilities/Generators	50.5
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	40.5
Cardio-vascular	65.3
Low Birth Weights	39.0
Socioeconomic Factor Indicators	—
Education	85.4
Housing	64.8
Linguistic	74.8
Poverty	47.8
Unemployment	86.2

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	30.41190812
Employed	40.65186706
Median HI	53.75336841
Education	—
Bachelor's or higher	13.64044655

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	69.0
Healthy Places Index Score for Project Location (b)	36.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Land Use	9-acre total park including 8,500 sf community building (modeled as General Office), courts/sidewalks, and 154 space parking lot
Construction: Construction Phases	Adjusted the construction phases and duration based on the Project Description
Construction: Off-Road Equipment	Adjusted default equipment mix based on Project Description
Construction: Trips and VMT	Rounded trips up to nearest even number. Added vendor trips to account for water trucks during site preparation and grading. Also added vendor and haul trucks during reservoir construction and pipeline/diversion/treatment facility phases to account for precast concrete and other structural/material import. For HRA/LST, reduced vehicle trip lengths to 0.25 miles to account for on-site/ pass by localized emissions

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description

Demolition	Demolition	10/25/2024	12/6/2024	5.00	31.0	—
Site Preparation	Site Preparation	8/15/2024	10/24/2024	5.00	51.0	—
Reservoir Excavation	Grading	12/7/2024	4/26/2025	5.00	100	—
Field Surface Replacement	Grading	10/20/2025	12/1/2025	5.00	31.0	—
Reservoir Construction	Building Construction	4/27/2025	10/19/2025	5.00	125	—
Pipe/Diversion/Treatment Facility	Building Construction	7/27/2025	10/19/2025	5.00	60.0	—
Upper Terrace/Bleacher Construction	Building Construction	12/2/2025	1/27/2026	5.00	41.0	—
Community Center Construction	Building Construction	1/20/2026	4/14/2026	5.00	61.0	—
Courts/Splash Pad/Amphitheater Construction	Building Construction	3/31/2026	5/26/2026	5.00	41.0	—
Concrete Pathway Construction	Building Construction	5/27/2026	6/24/2026	5.00	21.0	—
Ancillary Park Improvements	Building Construction	6/20/2026	8/15/2026	5.00	40.0	—
Parking Lots	Paving	5/12/2026	7/7/2026	5.00	41.0	—
Architectural Coating	Architectural Coating	3/18/2026	4/14/2026	5.00	20.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Rubber Tired Dozers	Diesel	Average	2.00	8.00	367	0.40
Demolition	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Demolition	Concrete/Industrial Saws	Diesel	Average	1.00	8.00	33.0	0.73
Site Preparation	Rubber Tired Dozers	Diesel	Average	3.00	8.00	367	0.40

Site Preparation	Tractors/Loaders/Backh	Diesel	Average	4.00	8.00	84.0	0.37
Reservoir Excavation	Graders	Diesel	Average	1.00	8.00	148	0.41
Reservoir Excavation	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Reservoir Excavation	Tractors/Loaders/Backhoes	Diesel	Average	3.00	8.00	84.0	0.37
Reservoir Excavation	Rubber Tired Dozers	Diesel	Average	2.00	8.00	367	0.40
Field Surface Replacement	Graders	Diesel	Average	1.00	8.00	148	0.41
Field Surface Replacement	Skid Steer Loaders	Diesel	Average	1.00	8.00	71.0	0.37
Field Surface Replacement	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Reservoir Construction	Cranes	Diesel	Average	1.00	8.00	367	0.29
Reservoir Construction	Rubber Tired Dozers	Diesel	Average	2.00	8.00	367	0.40
Reservoir Construction	Skid Steer Loaders	Diesel	Average	2.00	8.00	71.0	0.37
Pipe/Diversion/Treatment Facility	Cranes	Diesel	Average	1.00	8.00	367	0.29
Pipe/Diversion/Treatment Facility	Trenchers	Diesel	Average	2.00	8.00	40.0	0.50
Pipe/Diversion/Treatment Facility	Skid Steer Loaders	Diesel	Average	2.00	8.00	71.0	0.37
Upper Terrace/Bleacher Construction	Cranes	Diesel	Average	1.00	8.00	367	0.29
Upper Terrace/Bleacher Construction	Forklifts	Diesel	Average	1.00	8.00	82.0	0.20
Upper Terrace/Bleacher Construction	Cement and Mortar Mixers	Diesel	Average	1.00	8.00	10.0	0.56
Upper Terrace/Bleacher Construction	Aerial Lifts	Diesel	Average	1.00	8.00	46.0	0.31

Community Center Construction	Cranes	Diesel	Average	1.00	8.00	367	0.29
Community Center Construction	Forklifts	Diesel	Average	1.00	8.00	82.0	0.20
Community Center Construction	Cement and Mortar Mixers	Diesel	Average	1.00	8.00	10.0	0.56
Community Center Construction	Aerial Lifts	Diesel	Average	1.00	8.00	46.0	0.31
Courts/Splash Pad/Amphitheater Construction	Cranes	Diesel	Average	1.00	8.00	367	0.29
Courts/Splash Pad/Amphitheater Construction	Forklifts	Diesel	Average	1.00	8.00	82.0	0.20
Courts/Splash Pad/Amphitheater Construction	Cement and Mortar Mixers	Diesel	Average	1.00	8.00	10.0	0.56
Courts/Splash Pad/Amphitheater Construction	Aerial Lifts	Diesel	Average	1.00	8.00	46.0	0.31
Concrete Pathway Construction	Cement and Mortar Mixers	Diesel	Average	1.00	8.00	10.0	0.56
Ancillary Park Improvements	Cranes	Diesel	Average	1.00	8.00	367	0.29
Ancillary Park Improvements	Skid Steer Loaders	Diesel	Average	1.00	8.00	71.0	0.37
Ancillary Park Improvements	Forklifts	Diesel	Average	1.00	8.00	82.0	0.20
Ancillary Park Improvements	Cement and Mortar Mixers	Diesel	Average	1.00	8.00	10.0	0.56
Parking Lots	Skid Steer Loaders	Diesel	Average	1.00	8.00	71.0	0.37
Parking Lots	Rollers	Diesel	Average	1.00	8.00	36.0	0.38
Parking Lots	Plate Compactors	Diesel	Average	1.00	8.00	8.00	0.43
Parking Lots	Pavers	Diesel	Average	1.00	8.00	81.0	0.42

Architectural Coating	Air Compressors	Diesel	Average	1.00	8.00	37.0	0.48

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Rubber Tired Dozers	Diesel	Tier 4 Interim	2.00	8.00	367	0.40

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	10.4	annual days of extreme heat
Extreme Precipitation	4.50	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—

AQ-Ozone	42.6
AQ-PM	74.9
AQ-DPM	38.1
Drinking Water	66.2
Lead Risk Housing	75.5
Pesticides	0.00
Toxic Releases	90.7
Traffic	83.0
Effect Indicators	—
CleanUp Sites	5.69
Groundwater	59.6
Haz Waste Facilities/Generators	50.5
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	40.5
Cardio-vascular	65.3
Low Birth Weights	39.0
Socioeconomic Factor Indicators	—
Education	85.4
Housing	64.8
Linguistic	74.8
Poverty	47.8
Unemployment	86.2

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	30.41190812
Employed	40.65186706
Median HI	53.75336841
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	69.0
Healthy Places Index Score for Project Location (b)	36.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	9-acre total park including 8,500 sf community building (modeled as General Office), courts/sidewalks, and 154 space parking lot
Construction: Construction Phases	Adjusted the construction phases and duration based on the Project Description
Construction: Off-Road Equipment	Adjusted default equipment mix based on Project Description
Construction: Trips and VMT	Rounded trips up to nearest even number. Added vendor trips to account for water trucks during site preparation and grading. Also added vendor and haul trucks during reservoir construction and pipeline/diversion/treatment facility phases to account for precast concrete and other structural/material import. For HRA/LST, reduced vehicle trip lengths to 0.25 miles to account for on-site/ pass by localized emissions
