PHASE I ENVIRONMENTAL SITE ASSESSMENT**PROPOSED COMMERCIAL DEVELOPMENT
SWC 10TH STREET WEST & WEST AVENUE L
LANCASTER, CALIFORNIA****1.0 EXECUTIVE SUMMARY**

SALEM Engineering Group, Inc. (SALEM) has conducted a Phase I Environmental Site Assessment (ESA) of the Proposed Commercial Development site located on the southwest corner of 10th Street West and West Avenue L in Lancaster, California (subject property). The subject property consists of three contiguous parcels totaling approximately 3.73 acres (Los Angeles County Assessor's Parcel Numbers [APNs] 3109-026-047; 3109-026-048; and 3109-026-049). SALEM conducted this Phase I ESA of the subject property in conformance with the American Society for Testing and Materials (ASTM) E1527-21 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The U.S. Environmental Protection Agency (U.S. EPA) has determined that the ASTM E1527-21 Standard is consistent with the requirements for conducting an "All Appropriate Inquiry" under 40 C.F.R. Part 312. Thus, this Phase I ESA constitutes All Appropriate Inquiry (AAI) designed to identify Recognized Environmental Conditions (RECs) in connection with the previous ownership and uses of the subject property as defined by ASTM E1527-21 and 40 C.F.R. Part 312.

ASTM E1527-21 Section 1.1.1 *Recognized Environmental Conditions* – The term *recognized environmental conditions* is defined as "(1) the presence of hazardous substances or petroleum products in, on or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment." Conditions determined to be *de minimis* are not *recognized environmental conditions*.

During the course of this assessment, SALEM identified no evidence of a REC in connection with the subject property as defined by ASTM E1527-21.

2.0 PURPOSE AND SCOPE OF ASSESSMENT**2.1 Purpose**

According to ASTM E1527-21, the purpose of this practice is to define good commercial and customary practice in the United States of America for conducting an *environmental site assessment* of a parcel of *commercial real estate* with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. As such, this practice is intended to permit a *user* to satisfy one of the requirements to qualify for the *innocent landowner, contiguous property owner, or bona fide prospective purchaser* limitation on CERCLA liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"): that is, the practice that constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35) (B).

The Phase I ESA was conducted to identify ‘Recognized Environmental Conditions’ (RECs), ‘Controlled RECs’ (CRECs) and ‘Historical RECs’ (HRECs) as defined by the American Society for Testing and Materials (ASTM) Designation E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Section 1.1.1 of the ASTM Designation E1527-21 defines an REC as “(1) the presence of hazardous substances or petroleum products in, on or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on or at the subject property under conditions that pose a material threat of a future release to the environment.” The term as further defined by ASTM “is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.” Section 3.2.18 defines a CREC as “a recognized environmental condition affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of controls (for example, activity and use limitations or other property use limitations).” Section 3.2.42 defines HREC as “a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities, without subjecting the property to any controls (for example activity and use limitations, or other property use limitations).”

2.2 Scope of Work

The objective of the SALEM Phase I ESA scope of work is to provide an evaluation of RECs at the subject property and potential off-site sources. The scope of work for this Phase I ESA conforms to ASTM E1527-21. SALEM was provided authorization to conduct the Phase I ESA by Ms. Kristine Simmons with Rich Development Enterprises, LLC, on August 30, 2023 in accordance with the scope of work outlined in SALEM’s Proposal No. P3-423-1334. In fulfillment of the SALEM scope of work for this Phase I ESA, SALEM was retained to perform the following tasks:

- Acquire readily available information regarding land-use history and property development by reviewing historical aerial photographs, pertinent building permit records, historic city directories, as well as reviewing recent and historic topographic land-use maps of the subject property and surrounding area.
- Reviewing readily available local, state, and federal regulatory agency databases listed in ASTM E1527-21 and compiled by Environmental Data Resources, Inc. (EDR), including but not limited to CERCLA and NPL lists for sites within one mile of the subject property. State databases, including but not limited to CALSITES, Hazardous Substance Account Act, CORTESE, SWIS, SWAT, Well Investigation Program (AB1803), and LUFT, were reviewed for sites within 1 mile of the subject property.
- Performing a reconnaissance of the subject property and surrounding areas (up to ½- mile beyond site boundary), with regard to potential off-site sources of degradation to the subject property, which included photograph documentation of subject property conditions, and identification of potential environmental concerns. Interviews with persons knowledgeable of the previous and current ownership and uses of the subject property.
- Identifying aboveground storage tanks and/or indications of underground storage tanks on-site.
- In addition to ASTM E1527-21, SALEM recognizes ASTM *Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions* (ASTM E2600-

22) as an industry-accepted guideline to determine if a Vapor Encroachment Condition (VEC) exists at the target property. A VES consists of reviewing the Phase I ESA data combined with the application of professional judgment. SALEM evaluates the regulatory agency databases to determine if there are known or suspect contaminated sites within a minimum search distance of the target property. In addition, SALEM attempted to determine whether soil and/or groundwater have been impacted within the critical distances outlined in ASTM E2600-22.

- Preparing this report of SALEM's findings and recommendations if warranted.

3.0 SITE DESCRIPTION

The subject property consists of three contiguous parcels totaling approximately 3.73 acres (Los Angeles County APNs 3109-026-047; 3109-026-048; and 3109-026-049) located on the southwest corner of 10th Street West and West Avenue L in Lancaster, California. At the time of SALEM's September 10, 2023 site reconnaissance, the subject property was vacant land covered with native vegetation and gravel areas. The subject property is located within Section 33, Township 7 North, Range 12 West, San Bernardino Baseline and Meridian, United States Geological Survey (U.S.G.S.) 7.5 Minute Topographic Map, Lancaster West, California Quadrangle dated 2018.

4.0 PHYSIOGRAPHY AND HYDROGEOLOGIC CONDITIONS

The subject property is located within the Lancaster area of the Antelope Valley, which is within the southwestern portion of the Mojave Desert Geometamorphic Providence. The Antelope Valley is bounded by the Tehachapi Mountains of the Sierra Nevada Providence to the northwest and the San Gabriel of the Transverse Ranges to the southwest. A major portion of the Mojave Desert Providence is underlain by Mesozoic granitic rocks. Quarternary alluvium covers a majority of the Antelope Valley floor. Both the Tehachapi and San Gabriel mountain ranges are geologically young mountain ranges and possess active and potentially active fault zones. The City of Lancaster is on and within the San Andreas Fault zone in the Antelope Valley. Although the San Andreas Fault is classified by the State of California as an active fault, there has not been any record of recent fault activity in the general area.

According to California Regional Water Quality Control Board (RWQCB) records, for the Costco Gasoline Station #762 leaking underground storage tank (LUST) site at 1051 West Avenue L, located adjoining to the northwest of the subject property, groundwater was expected to be encountered at a depth of 100 feet below ground surface (bgs). Based upon SALEM's topographic map interpretation, the estimated groundwater flow direction is anticipated to follow the topography at the subject property towards the north. However, local groundwater level and flow direction may vary due to seasonal fluctuations in precipitation, usage demands, geology, and/or surface topography.

5.0 SITE RECONNAISSANCE

A site reconnaissance, which included a visual observation of the subject property and properties within the subject area, was conducted by SALEM's environmental assessor on September 10, 2023. The objective of the site reconnaissance is to identify RECs, including the storage and handling of hazardous substances and petroleum products on or in the vicinity of the subject property which have the potential to environmentally impact on-site soils, surface water and groundwater.

5.1 Observations

Table I summarizes the visual observations made during our site reconnaissance. A discussion of the physical observations follows Table I. Refer to the Site Map (Figure 1) and color photographs following the text for the locations of the features discussed in this section of the report.

The subject property consists of three contiguous parcels totaling approximately 3.73 acres (Los Angeles County APNs 3109-026-047; 3109-026-048; and 3109-026-049) located on the southwest corner of 10th Street West and West Avenue L in Lancaster, California. At the time of SALEM's site reconnaissance, the subject property was vacant land covered with native vegetation and gravel areas.

- Minor amounts of household trash and debris were observed throughout the property. Additionally, what appeared to be cut metal posts were observed along the western boundary of the subject property.
- During visual observations of the subject property, no hazardous substances or petroleum products were observed to be stored or handled on the subject property. Exposed surface soils did not exhibit obvious signs of discoloration. No other obvious evidence (vent pipes, fill pipes, dispensers, etc.) of USTs was noted within the area observed. No standing water or major depressions were observed on the subject property. No indications of former structures, such as foundations, were observed on the subject property.

5.2 Adjacent Streets and Property Usage

Table II summarizes the adjacent streets and properties uses observed during the SALEM's site reconnaissance.

TABLE II
Adjacent Streets and Property Use

DIRECTION	ADJACENT STREET	ADJACENT PROPERTY USE
North	West Avenue L	Wendy's (1015 W. Avenue L)
East	10 th Street West	Carl's Jr. (852 W. Avenue L); Multi-Tenant Strip Mall (830 W. Avenue L); Budget Self-Storage (42722 10 th Street W.); California Tile Supply (42704 10 th Street W.)
South	None	Undeveloped
West	None	Kingdom Hall of Jehovah's Witnesses (1034 W. Avenue L)
Northwest	West Avenue L	Costco Gasoline Station (1051 W. Avenue L)

Based on the observed uses of the properties located immediately adjacent to the subject property, it is unlikely that significant quantities of hazardous substances or petroleum products are stored or handled at the adjoining properties, with the exception of the Costco Gasoline Station.

The Costco Gasoline Station #762 at 1051 West Avenue L, located adjoining to the northwest and down-gradient of the subject property was identified in the EDR-provided Radius Map Report on the Cortese, CERS HAZ WASTE, CERS TANKS, CERS, UST, and LUST databases as having had an unauthorized release of gasoline discovered in February 2019 which impacted "soil only" beneath the facility. The petroleum hydrocarbon-impacted soils were remediated under the regulatory agency supervision of the Los Angeles County Fire Department (LACFD) and the RWQCB. A "case closed" designation for the LUST incident was granted on February 10, 2020. Based upon various influencing factors including; the down-gradient location of the Costco Gasoline Station #762 LUST site from the subject property; media impacted ("soil only"); identification of a responsible party (RP) for assessment and remediation costs; and the current regulatory agency status ("case closed"); the Costco Gasoline Station #762 LUST site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property. Please refer to Section 8.0 *Regulatory Agency Records Review* for a detailed discussion pertaining to the adjoining property.

5.3 Potable Water Source

The water purveyor for the subject property is the Los Angeles County Public Works Department (LACPWD). The LACPWD's water quality monitoring is an on-going program with water samples obtained on a regular basis. It is the responsibility of the LACPWD to provide customers with potable water in compliance with the California Maximum Contaminant Levels (MCLs) for primary drinking water constituents in water supplied to the public. Water sampling was not conducted to verify water quality.

5.4 Sewage Disposal System

SALEM's research indicates that no sewage disposal systems have historically serviced the subject property.

5.5 Heating and Cooling Source

No structures are located on the subject property. Therefore, no heating or cooling sources exist at the subject property. No documentation of fuel oil use was identified during review of reasonably ascertainable records and no visual evidence of fuel oil use was identified during the site reconnaissance.

6.0 USER-PROVIDED INFORMATION

A review of the user-provided Title report and a Phase I ESA User Questionnaire was conducted in order to help identify pertinent information regarding potential environmental impacts associated with the subject property.

6.1 Title Report

On August 29, 2023, a Commitment for Title Insurance Report for the subject property by First American Title Insurance Company, dated August 16, 2023 was provided to SALEM by Ms. Kristine Simmons with Rich Development Enterprises, LLC. The Commitment for Title Insurance Report was reviewed to identify potential deed restrictions, environmental liens or activity and use limitations (AULs) which may have occurred on or exist in connection with the subject property as indicated by the Commitment for Title Insurance Report. SALEM's review of the Commitment for Title Insurance Report indicated no deed restrictions, environmental liens or AULs for the subject property. Please refer to Appendix A for a copy of the Commitment for Title Insurance Report.

6.2 Phase I Environmental Site Assessment User Questionnaire

On August 30, 2023, a completed Phase I ESA User Questionnaire was received from Mr. John Rich with Rich Development Enterprises, LLC. Please refer to Appendix B for a copy of the completed Phase I ESA User Questionnaire.

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete. The user is asked to provide information or knowledge of the following:

- Environmental cleanup liens that are filed or recorded against the site.
- Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry.
- Specialized knowledge or experience of the person seeking to qualify for the LLPs.
- Relationship of the purchase price to the fair market value of the *property* if it were not contaminated.
- Commonly known or *reasonably ascertainable* information about the *property*.
- The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation.

According to Mr. Rich, to the best of his knowledge as the user of this Phase I ESA, no environmental cleanup liens and no activity or land use limitations have been filed or recorded against the subject property. Mr. Rich indicated that he did not have knowledge of the past or current spills or chemical releases or environmental cleanups at the subject property. Additionally, Mr. Rich indicated that the purchase price of the subject property reasonably reflects fair market value.

7.0 SITE USAGE SURVEY

In order to assess the subject property's history, SALEM reviewed a Phase I ESA Owner Questionnaire, historical aerial photographs, building department records, city directories, planning department records and SFIMs.

7.1 Phase I Environmental Site Assessment Owner Questionnaire

On September 8, 2023, a Phase I ESA Owner Questionnaire was received from Mr. Farzin Halavy, the current owner of the subject property. The Phase I ESA Owner Questionnaire is designed to provide pertinent information regarding potential environmental and historical impacts associated with the subject property. Mr. Halavy reported that he had been familiar with the subject property since 2004, and that the subject property has always been undeveloped land.

According to Mr. Halavy, to the best of his knowledge, no on-site treatment or discharge of waste; no on-site leach fields, dry wells, sumps, or disposal ponds; no use, storage or disposal of hazardous substances and/or petroleum products; no existing or former USTs or ASTs; no hazardous material spills; no buried materials; no domestic, monitoring, or irrigation wells; or any additional items of environmental concern were associated with the subject property. Please refer to Appendix C for a copy of the completed Phase I ESA Owner Questionnaire.

7.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property and vicinity dated 1928, 1940, 1948, 1953, 1968, 1972, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2020 were reviewed to evaluate changes in land-use for the subject property. The historical aerial photographs were supplied by EDR. Refer to Appendix D for a copy of the EDR-provided aerial photographs. A summary of the aerial photographs is provided below:

- **2020 Aerial Photograph**
The majority of the subject property appears to have been paved with an asphalt parking lot. The conditions on the adjoining properties are similar to the 2016 aerial photograph.

7.3 Building Department Records Review

On September 7, 2023, a records request was made to the City of Lancaster Building Department (LBD) for the subject property. According to a LBD representative, building permit records are filed by street address, and a street address has not been assigned to the subject property. Therefore, no building permits for items of environmental concern including, USTs, ASTs, septic systems, demolition, or previous structures were on file for the subject property.

7.4 City Directories

On September 5, 2023, SALEM contracted with EDR to provide a City Directory Image Report dated 1971 through 2020 for the subject property, as well as the adjoining properties. The subject property was not listed in the City Directory Abstract Report. The listed occupants of the adjoining properties did not appear likely to store or handle significant quantities of hazardous substance or petroleum products that may present an REC to the subject property. Please refer to Appendix E for a copy of the EDR-provided City Directory Image Report.

7.5 Sanborn Fire Insurance Maps

SALEM reviews Sanborn Fire Insurance Maps (SFIMs) to evaluate prior land use at the subject property and adjacent properties. SFIMs typically exist for cities with populations of 2,000 or more, the coverage dependent on the location of the property. On August 31, 2023, SALEM contracted with EDR to provide a Fire Insurance Map Abstract indicating the availability of historic SFIMs for the subject property and adjacent properties as far back as 1867. EDR's search of collections at the Library of Congress, University Publications of America, and various public and local sources revealed no coverage for the subject property and adjacent properties. Please refer to Appendix F for a copy of the EDR SFIM No Coverage Certification.

7.6 Agricultural Chemicals

Review of historical aerial photographs dating to 1928 reveals that the subject property has not been utilized for agricultural purposes. Therefore, the use, storage, and application of agricultural chemicals at the subject property are not considered an environmental concern.

7.7 Phase I Environmental Site Assessment Interview - Previous Owner

SALEM attempted to interview the previous owner of the subject property to provide pertinent information regarding potential environmental and historical impacts associated with the subject property. However, a Phase I ESA interview with the previous owner of the subject property was not reasonably ascertainable.

7.8 Previous Environmental Reports

SALEM was not provided with additional environmental reports for the subject property.

8.0 REGULATORY AGENCY RECORDS REVIEW

SALEM conducted a review of regulatory agency records for the purpose of determining if hazardous substances/petroleum products or hazardous wastes have been stored or handled on the subject property and area properties of environmental concern. The most current records available were reviewed.

California Environmental Protection Agency, Department of Toxic Substances Control

SALEM's September 7, 2023 review of the California Environmental Protection Agency (Cal-EPA), Department of Toxic Substances Control (DTSC) EnviroStor database available via the DTSC EnviroStor website (<https://www.envirostor.dtsc.ca.gov/public/>), which tracks federal superfund sites, state response sites, voluntary cleanup sites, and school cleanup sites, indicated that no records of cleanup sites are on file with the DTSC for the subject or adjoining properties.

California Regional Water Quality Control Board

SALEM's September 7, 2023 review of the RWQCB GeoTracker leaking underground fuel tank (LUFT) database available via the RWQCB Internet Website indicated no records of LUFTs are on file with the RWQCB for the subject property. However, the following records of LUFTs are on file with the RWQCB for one adjoining property:

The Costco Gasoline Station #762 at 1051 West Avenue L, located adjoining to the northwest and down-gradient of the subject property was identified as having had an unauthorized release of “gasoline” reported in February 2019 following UST upgrade activities at the site. After removal activities were conducted, compliance soil sampling was conducted under the direction of the LACFD. Soil samples were collected beneath each of the eight dispensers to a depth of approximately 20 feet bgs. A total of 16 soil samples were analyzed for gasoline range total petroleum hydrocarbons (TPH-g); benzene, toluene, ethylbenzene and xylenes (BTEX); fuel oxygenates and ethanol. Analytical results of the soil samples indicated hydrocarbon constituents were not present at concentrations at or above their respective reporting limits, except for toluene in one sample (Pipe-7), which had a reported toluene concentration of 0.008 milligrams per kilogram (mg/kg). Based on the results of the investigation, it was determined that the vertical and lateral extent of hydrocarbon impact had been adequately defined. Therefore, the RWQCB issued a “no further action” designation for the Costco Gasoline Station #762 site on February 10, 2020. Based upon various influencing factors including the down-gradient location of the Costco Gasoline Station #762 LUFT site from the subject property; media impacted (“soil only”); current regulatory agency status (“case closed”); and the identification of a RP for assessment and remediation costs, the Costco Gasoline Station #762 LUFT site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property. Please refer to Appendix G for copies of RWQCB records.

California Geologic Energy Management Division

SALEM reviewed the California Geologic Energy Management Division (CalGEM) Well Finder website (<http://maps.conservation.ca.gov/doggr/wellfinder>) to evaluate the potential for existing/former oil, gas, or geothermal wells on the subject property or adjoining properties. The subject property is located within CalGEM Southern District. The subject property vicinity is not located within an oil, gas, or geothermal field. The review of CalGEM information does not indicate that an oil, gas, or geothermal well has been drilled on the subject or adjoining properties.

Los Angeles County Department of Public Works – Environmental Programs Division

On August 31, 2023, the Los Angeles County Department of Public Works – Environmental Programs Division (LACDPW) was contacted regarding records of historical hazardous/flammable permits, hazardous substances and/or petroleum products handling, registered USTs, and unauthorized releases of hazardous substances and/or petroleum products for the subject property. According to the LACDPW, no records were available for the subject property.

Los Angeles County Fire Department – Health Hazardous Materials Division

On August 31, 2023, the Los Angeles County Fire Department – Health Hazardous Materials Division (LACFD-HHMD) regarding records of historical hazardous/flammable permits, hazardous substances and/or petroleum products handling, and unauthorized releases of hazardous substances and/or petroleum products for the subject property. According to the LACFD-HHMD, no records were available for the subject property.

Los Angeles County Sanitation District

On August 31, 2023, the Los Angeles County Sanitation District (LACSD) was contacted regarding records of historical wastewater discharge permits, industrial waste clarifiers, hazardous substances and/or petroleum products, hazardous wastes, and unauthorized releases of hazardous substances and/or petroleum products for the subject property. According to the LACSD, no records were available for the subject property.

Local Area Tribal Records

According to the EDR Radius Map Report, no tribal records are listed for the subject or adjoining properties.

8.1 Standard Environmental Record Sources

EDR performed a search of federal, state, and local regulatory agency databases for the subject property and surrounding area. The various search distances as required by ASTM E1527-21 extended up to one mile from the subject property. Several agencies have published documents that list businesses or properties which have handled hazardous materials or hazardous waste, or may have had a documented release of hazardous substances or petroleum products. The databases consulted in the course of this assessment were compiled by EDR on August 31, 2023 and represent reasonably ascertainable current listings. SALEM did not verify the locations and distances of every site listed by EDR. SALEM verified locations and distances of the sites SALEM deemed as having a potential to environmentally impact the subject property. The actual location of the off-site properties identified may differ from the EDR listing. Table III summarizes the listed properties located within the specified ASTM Search Radii. The EDR Radius Map report is included in Appendix H.

0 = No sites in radius identified

--- = Not Searched

The subject property was not identified in the EDR-provided government database report. The following site with a reported release of hazardous substances or petroleum products to the subsurface was reported within a one-eighth-mile radius of the subject property:

- The Costco Gasoline Station #762 at 1051 West Avenue L, located adjoining to the northwest and down-gradient of the subject property, was identified in the EDR-provided Radius Map Report on the Cortese, CERS HAZ WASTE, CERS TANKS, CERS, UST, and LUST databases as having had an unauthorized release of gasoline discovered in February 2019 which impacted “soil only” beneath the facility. The petroleum hydrocarbon-impacted soils were remediated under the regulatory agency supervision of the LACFD and the RWQCB. A “case closed” designation was granted by the RWQCB for the LUST incident on February 10, 2020. Based upon various influencing factors including; the down-gradient location of the Costco Gasoline Station #762 LUST site from the subject property; media impacted (“soil only”); identification of a RP for assessment and remediation costs; and the current regulatory agency status (“case closed”); the Costco Gasoline Station #762 LUST site is deemed to have a low potential to environmentally impact the subject property and therefore, does not present an REC to the subject property. Please refer to Section 8.0 *Regulatory Agency Records Review* for a detailed discussion pertaining to the adjoining property.

In general, only hazardous substances or petroleum products released from facilities located approximately up-gradient and within a few hundred feet of the subject property, or in a cross-gradient direction close to the subject property, are judged to have a reasonable potential of migrating to the subject property. This opinion is based on the assumption that materials generally do not migrate large distances laterally within the soil, but rather tend to migrate with groundwater in the general direction of groundwater flow.

One orphan site was identified in the EDR-provided government database report. Based upon SALEM’s visual observations made during our site reconnaissance, as well as various influencing factors including approximate distance from the subject property, the orphan site is deemed to have a low potential to environmentally impact the subject property.

No engineering control sites, sites with institutional controls, or sites with deed restrictions were listed for the subject property, adjoining, or vicinity properties in the EDR-provided government database report.

No Indian reservations or LUSTs on Indian land were reported on the subject property, adjoining, or vicinity properties in the EDR-provided government database report.

The remaining properties identified by EDR within the specified search radius of the subject property, which appeared on local, state, or federally published lists of sites that use of have had releases of hazardous substances or petroleum products, were determined through SALEM’s field observations to be of sufficient distance and/or situated hydraulically cross/downgradient of the subject property, such that impacts to the subject property are not likely.

9.0 POTENTIAL VAPOR ENCROACHMENT CONDITION

Vapor intrusion is a way by which chemicals in soil and groundwater can migrate into indoor air. Chemical vapors moving up through soil and into a building are a potential source of indoor air contamination and may pose a risk to human health. In evaluating the potential for a vapor encroachment condition (VEC) on the subject property, SALEM attempted to determine if there was information indicating that chemicals of concern were located within the “critical distance,” defined as the lineal distance between the nearest edge of a contaminated plume and the nearest target property boundary. Based on ASTM E 2600-22 *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the “critical distance” is equal to 100 feet, with the exception of dissolved petroleum hydrocarbons, which have a “critical distance” of 30 feet. If non-aqueous phase petroleum hydrocarbons are present, the 100-foot “critical distance” is utilized.

9.1 Vapor Encroachment Screening

SALEM has performed a Vapor Encroachment Screening (Tier 1) in general accordance with the scope and limitations of ASTM Standard Practice E2600-22 for the subject property. SALEM utilized site and site vicinity specific criteria including groundwater gradient, distance of area properties of environmental concern from the subject property, and the types of constituents of concern which were released to evaluate potential vapor encroachment issues. The purpose of this Vapor Encroachment Screening (Tier 1) is to identify the existing or potential Vapor Encroachment Conditions (VEC), (as defined by ASTM E2600-22) affecting the subject property. As part of the screening, SALEM has completed the following questionnaire, as duplicated from Section X3 of ASTM E2600-22.

TABLE IV
Vapor Encroachment Questionnaire

TABLE V
Additional VEC Criteria

QUESTION	RESPONSE	COMMENTS
1. Is the subject property known to have current or past contamination?	No	
2. Is contamination of the subject property suspected?	No	
3. Is an <u>adjacent</u> property known to have current or past contamination which may have impacted the subject property?	No

5. Is regional groundwater contamination known to exist beneath the subject property?	No	
6. Are you aware of other conditions which may result in vapor intrusion at the subject property?	No	

Based upon the results of SALEM's Tier 1 VES, it is SALEM's opinion that a potential VEC "likely does not exist" at the subject property. As such, no further assessment is recommended.

10.0 BUSINESS ENVIRONMENTAL RISKS

10.1 Asbestos-Containing Building Materials

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. Asbestos is commonly used as an acoustic insulator, thermal insulation, fire proofing and in other building materials. Friable asbestos-containing material (ACM), when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. Non-friable ACM can be crumbled, pulverized, or reduced to powder during machining, cutting, drilling, or other abrasive procedures. Friable ACM is more likely to release fibers when disturbed or damaged than non-friable ACM. Exposure to airborne friable asbestos may result in a potential health risk because persons breathing the air may breathe in asbestos fibers. Continued exposure can increase the amount of fibers that remain in the lung. Fibers embedded in lung tissue over time may cause serious lung diseases including: asbestosis, lung cancer, or mesothelioma. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are “presumed asbestos-containing material” (PACM).

During SALEM’s site reconnaissance, no structures were observed on the subject property. Therefore, ACMs are not considered an on-site environmental concern at this time.

10.2 Lead-Based Paint

Lead is a highly toxic metal that affects virtually every system of the body. While adults can suffer from excessive lead exposures, the groups most at risk are fetuses, infants, and children under 6. The Consumer Product Safety Commission banned the use of lead in paint in 1978. Most manufactures, however, had ceased using lead well before this time. Paint applied after 1978 is not considered suspect LBP. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as “Title X,” to protect families from exposure to lead from paint, dust, and soil. Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on lead-based paint (LBP) and LBP hazards before the sale or lease of most housing built before 1978. Sellers, landlords, and their agents are responsible for providing this information to the buyer or renter before sale or lease.

According to Section 1017 of Title X, “LBP hazard is any condition that causes exposure to lead from lead-contaminated dust; bare, lead-contaminated soil; or LBP that is deteriorated or intact LBP present on accessible surfaces, friction surfaces, or impact surfaces that would result in adverse human health effects.” Therefore, under Title X intact lead-based paint on most walls and ceilings is not considered a “hazard,” although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. LBP is defined as any paint, varnish, stain, or other applied coating that has 1.0 mg/cm² (or 5,000 µg/g by weight) or more of lead.

During SALEM’s site reconnaissance, no structures were observed on the subject property. Therefore, LBP is not considered an on-site environmental concern at this time.

10.3 Radon

Radon is a naturally occurring gaseous substance resulting from the radioactive decay of uranium to radium and then to radon. Uranium is a common element found in many geologic formations and substrates, particularly igneous and metamorphic rocks. Radon has a half-life of only 3.8 days and decays to its daughter elements (polonium 218, polonium 214, bismuth 214, and lead 214). It is these daughter elements that represent the health hazard commonly associated with radon. Radon gas can enter a building through cracks in the foundation and walls and become attached to dust particles and inhaled which could cause

damage to human lung tissue. Radon is measured in picocuries per liter of air (pCi/L). The EPA has an established safe radon level of 4 pCi/L. Based on the EPA Radon Zone Map of California, the subject Property is located within **EPA Zone 2**, which has a predicted indoor radon screening less than 4 pCi/L (Low Potential). The EDR-provided radon data cites Los Angeles County has having 98% of 1st floor spaces with <4 pCi/L. However, radon levels may vary from one area to another and the only way to accurately assess radon gas levels on the subject property is to conduct a radon gas survey.

10.4 Mold

Molds are microscopic organisms found virtually everywhere, indoors, and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding). Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brown, black, yellow, and green. In large quantities, molds can cause allergic symptoms when inhaled or through the toxins the molds emit.

During SALEM's site reconnaissance, no structures were observed on the subject property. Therefore, mold is not considered an on-site environmental concern at this time.

11.0 DISCUSSION OF FINDINGS

Historical Uses

The subject property consists of three contiguous parcels totaling approximately 3.73 acres (Los Angeles County APNs 3109-026-047; 3109-026-048; and 3109-026-049) located on the southwest corner of 10th Street West and West Avenue L in Lancaster, California (subject property). SALEM's review of historical aerial photographs dating to 1928 indicates that the subject property has been undeveloped land. No structures have historically been located on the subject property.

Based on SALEM's site reconnaissance, and contacts with state and local regulatory agencies, the potential for RECs to exist in connection with the historical use of the subject property appears to be low.

Current Uses

At the time of SALEM's September 10, 2023 site reconnaissance, the subject property was vacant land covered with native vegetation and gravel areas. Minor amounts of household trash and debris were observed throughout the property. Additionally, what appeared to be cut metal posts were observed on the subject property along the subject property's western boundary. During visual observations of the subject property, no hazardous substances or petroleum products were observed to be stored or handled on the subject property. Exposed surface soils did not exhibit obvious signs of discoloration. No other obvious evidence (vent pipes, fill pipes, dispensers, etc.) of USTs was noted within the area observed. No standing water or major depressions were observed on the subject property. No indications of former structures, such as foundations, were observed on the subject property.

Based on SALEM's, field observations, and contacts with state and local regulatory agencies, the potential for adverse environmental impacts to the subject property associated with current site use appears to be low and therefore, there is a low potential for RECs to exist in connection with the current use of the subject property.

Adjoining Properties

Based on SALEM's field observations, review of the EDR Radius Map Report and consultation with state and local regulatory agencies, the potential for RECs to exist in connection with the subject property from adjoining property uses appears to be low.

11.1 Evaluation of Data Gaps/Data Failure

In accordance with ASTM E1527-21 guidance, data gaps represent a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice. Data failure represents the failure to achieve the historical research objectives of this practice even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap. The following is a summary of data gaps encountered in the process of preparing this report including an observation as the presumed significance of that data gap to the conclusions of this assessment.

- Some of the intervals between documented sources exceeded five years.

However, taken in consideration with the available information obtained in the course of preparing this report in conjunction with professional experience, there is no evidence to suggest that these data gaps might alter the conclusions of this assessment.

12.0 SUMMARY AND CONCLUSIONS

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-21 of the Proposed Commercial Development site located on the southwest corner of 10th Street West and West Avenue L in Lancaster, California (Los Angeles County APNs 3109-026-047; 3109-026-048; and 3109-026-049), the *property*. Any exceptions to, or deletions from, this practice are described in Section 13 of this *report*. During the course of this assessment, SALEM identified no evidence of a REC in connection with the subject property as defined by ASTM E1527-21.

13.0 LIMITATIONS

This Phase I ESA Report has been prepared for the exclusive use of **Rich Development Enterprises, LLC** and its subsidiaries and affiliates. Unauthorized use of or reliance on the information contained in this report, unless given express written consent by SALEM and **Rich Development Enterprises, LLC**, is strictly prohibited. The following limitations and exceptions apply:

- The scope of work completed was designed solely to meet the needs of SALEM's client. SALEM shall not be liable for any unintended usage of this report by another party. In addition, based on the ASTM guidelines, the ESA is only valid if completed within 180 days of an acquisition or the transaction necessitating the ESA.
- No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. This ESA was designed to reduce, but not eliminate the potential for RECs at the subject property, within reasonable limits of time and cost. The ESA is not intended to be exhaustive or all-inclusive and does not represent a guarantee of the identification of all possible environmental risk.
- An ESA is intended to be a non-intrusive investigation and generally does not include sampling or testing of air, soil, water or building materials. No destructive testing was completed and concealed areas, such as behind walls or within machinery, were not accessed. Testing, if any, is designed solely to meet the needs of the ESA, not to meet any local, state, or federal regulations and should not be utilized as such.

- Information in this report is based on personal interviews, government records, published resources, and various historical documents. Accuracy and completeness of information varies among information sources and is often inaccurate or incomplete. The information utilized in this ESA is from sources deemed to be reliable; however, no representation or warranty is made as to the accuracy thereof. SALEM will have no ongoing obligation to obtain and include information that was not reasonably ascertainable, practically reviewable or provided to SALEM in a reasonable timeframe to formulate an opinion and complete the assessment by the agreed upon due date.
- Unless specifically identified in the scope of work, the ESA excludes consideration of non-ASTM scope issues including, but not limited to, lead in drinking water, asbestos, lead-based paint, industrial hygiene, health and safety, endangered species, wetlands, indoor air quality, vapor intrusion, electromagnetic fields, biological agents, or mold.
- The ESA includes some information that may be relevant to regulatory compliance, but is not intended and shall not be construed as a compliance audit and cannot be considered a verification of regulatory compliance. While the general environmental setting of the subject property is described, this assessment is not intended to be a formal flood plain or wetland determination, and no warranty is made thereof. Depending on its past, present, or future intended use, the property under review may or may not be subject to regulation and permitting under environmental and Health and safety laws, such as, but not limited to, the Clean Air Act, the Clean Water Act, the Solid Waste Disposal Act, the Occupational Safety and Health Act, and other federal, state, and local regulations. SALEM assumes no responsibility or liability respecting regulatory permitting or compliance issues.
- Client is advised that if the ESA is obtained with the intent of qualifying the purchaser as an innocent landowner, contiguous property owner, or bona fide prospective purchaser under CERCLA, there will be continuing obligations of due care and responsiveness and additional legal requirements that likely apply to such status. SALEM accepts and undertakes no responsibility as to such requirements and advises that counsel be separately consulted with respect to such requirements.
- The findings and conclusions presented in this Phase I ESA Report are based on field review and observations and on data obtained from the sources listed in the report. The findings of this report are valid as of the present. The passage of time, natural processes or human intervention on the subject property or adjacent properties and changes in the regulations can cause changed conditions which can invalidate the findings and conclusions presented in this report.

Contract No. 01-1010-14-7**

C-9169167

Dear Mr. Grice:

Kleinfelder is pleased to provide Costco Wholesale Corporation (Costco) this *Compliance Sampling Report* describing compliance soil sampling activities performed at Costco's Warehouse Number (No.) 762 (the "Site"), which is located at 1051 West Avenue "L" in Lancaster, California (see Figures 1 and 2). The compliance sampling was performed in association with gas station expansion activities that included replacement of eight existing dispensers and the controller enclosure and upgrading of conveyance piping.

Compliance soil sampling was performed at the Site on February 12, 2019, following removal of the gas station's dispensers and associated conveyance piping, and was directed by Los Angeles County Fire Department (LACFD) staff. As is further described in this report, analytical results of soil samples collected by Kleinfelder during the upgrade activities indicate toluene was present in a single compliance soil sample, at a concentration marginally above its laboratory practical quantitation limit (PQL), but other petroleum hydrocarbon constituents were not present in the samples at concentrations at or above their respective reporting limits. Given the compliance soil sampling results, Kleinfelder recommends no further action.

COMPLIANCE SOIL SAMPLING, ANALYSES, AND RESULTS

On February 12, 2019, post-removal compliance soil sampling was performed by Kleinfelder. Pursuant to the direction of LACFD inspector Mr. Tom Custard, soil samples were collected from beneath where each of the eight dispensers had been removed, and at approximate 20-foot lateral intervals from beneath where product piping had been removed. The approximate sample locations are shown on Figure 2.

A 881702

In total, 16 compliance soil samples were collected from approximately 2 feet beneath where dispensers had been removed (Samples Disp-1 through Disp-8) and from approximately 2 feet beneath where piping had been removed (Samples Pipe-1 through Pipe-8). The samples were placed in laboratory-provided glass jars, with the portion of each soil sample to be analyzed by the laboratory for volatile organic compounds (VOCs) preserved in the field in accordance with United States Environmental Protection Agency (US EPA) Method 5035. As part of Kleinfelder's quality control (QC) program, field QC samples were collected, including a field duplicate (Pipe-3 Dup), equipment blank (EQ Blank), and trip blank (190211-TB) that were submitted to the laboratory for analysis along with the regular samples. Each sample was labeled and then placed into a water ice-chilled cooler, which was subsequently delivered, accompanied by chain of custody, to a California Environmental Laboratory Accreditation Program-accredited laboratory.

Soil samples (including the field duplicate) and the equipment blank were analyzed for gasoline-range total petroleum hydrocarbons (TPH-g) and VOCs including benzene, toluene, ethylbenzene, and total xylenes (BTEX), fuel oxygenates, and ethanol. The trip blank was analyzed for BTEX, fuel oxygenates, and ethanol. TPH-g analysis of the soil samples was performed using US EPA Methods 5035/8015B, whereas TPH-g analysis of the equipment blank was performed using US EPA Methods 5030/8015B. The soil samples were analyzed for BTEX and fuel oxygenates using US EPA Methods 5035/8260B, whereas the equipment blank and trip blank samples were analyzed for these analytes using US EPA Methods 5030/8260B. Ethanol analysis of the soil and QC samples was performed using US EPA Method 8260B.

The analytical results for the compliance soil samples are summarized in Table 1, whereas the analytical results for the trip blank and equipment blank are summarized in Table 2. Except for Sample Pipe-7, which contained a reported toluene concentration of 0.008 milligram per kilogram (mg/kg), TPH-g, BTEX, fuel oxygenates, and ethanol were not present in the soil samples at concentrations at or above their respective practical quantitation limit (PQL).

Analytical results for the trip blank indicated TPH-g, BTEX, fuel oxygenates, and ethanol were not present at concentrations at or above their respective PQL. Finally, results for the equipment blank indicated BTEX, fuel oxygenates, and ethanol were not present at concentrations at or above their respective PQL.

A copy of the analytical laboratory report is provided in Attachment A.

DISCUSSION

Compliance soil sampling was performed at the Site on February 12, 2019, following removal of the gas station's dispensers and associated conveyance piping, and was directed by LACFD staff. Figure 2 shows the approximate compliance sampling locations. Analytical results of the compliance soil samples indicate hydrocarbon constituents were not present at concentrations at or above their respective PQL except for toluene in one soil sample (Pipe-7), which had a reported toluene concentration of 0.008 mg/kg.

Sample Pipe-7's toluene concentration was compared to the Regional Water Quality Control Board, Los Angeles and Ventura Counties, Region 9's 1-mg/kg Maximum Soil Screening Level

for toluene for soil having a gravel lithology and situated approximately 80 feet above the groundwater surface¹ (note that in the Site vicinity, groundwater is estimated to be present at a depth of approximately 100 feet below ground surface). The toluene concentration was also compared to toluene's modified screening levels for residential and commercial soil (1,100 mg/kg and 5,300 mg/kg, respectively), issued in June 2018 by the California Environmental Protection Agency's Department of Toxic Substances Control (DTSC),² and to toluene's Regional Screening Levels (RSLs) for residential and industrial soil (4,900 mg/kg and 47,000 mg/kg, respectively) issued by the US EPA in November 2018.³ These comparisons indicated the 0.008-mg/kg toluene concentration in Sample Pipe-7 is below each screening level.

Given these compliance soil sampling results, Kleinfelder recommends no further action.

Hazardous Substances Underground Storage Permit (HSUSP) New Construction Plan Clearance, Permit Addendum, or Piping Replacement Review

Do not use this form for closure, transfer, or renewal of an existing HSUSP (Operating Permit) or Unified Program (UP) Permit.

This form is for authorization to construct or modify hazardous substances Underground Storage Tank (UST) facilities only. A separate HSUSP or UP Facility Permit, is required to operate the approved system. This authorization will not be approved unless a valid HSUSP or UP Facility Permit application is on file with the Department of Public Works.

A The UST Owner/Operator, Facility name, and facility address on this form must correspond with the information provided in California Environmental Reporting System (CERS) for the UST Facility Operating Permit Application.

B This form must be submitted for new construction (installation of new USTs) plan clearance, piping replacement, or for an addendum to an existing HSUSP. Specify the number of USTs to be installed and the total number of USTs after installation. Existing facilities with a valid operational HSUSP or UP Facility Permit need not make a separate HSUSP application to add or modify USTs. Work must commence within 180 days from the date of issuance of plan approval or the approval will be voided. An extension of up to 180 days may be granted at one-half the initial new construction plan clearance fee. If construction work has not commenced within 360 days from the date of plan approval issuance, such plan approval shall be null and void.

C Plans and specifications submitted for a new construction plan clearance must conform to the Los Angeles County Code, Title 11, Division 4, and shall be to the satisfaction of the Director of the Department of Public Works. Other clearances such as local fire department, building and safety, planning, and/or Air Quality Management District, etc. may also be required.

In addition to the plan clearance fee, an operating permit application fee will be required when applying to construct a new facility. No refund of current year HSUSP fees due will be allowed for a net decrease in the number of USTs. State surcharge or service fees paid on existing or renewed USTs are not transferable to new USTs.

D Specify the type of modification or change to existing USTs. Types of modifications and changes requiring an addendum include: repair of USTs, replacements of piping, change or addition of hazardous substances stored, change in monitoring equipment, change of overfill protection devices, or additions or modifications to dispenser containment devices.

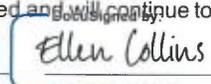

E A fee of **\$751** must be submitted for each addendum. Where a previously unregistered UST is added to an existing HSUSP, an additional application fee including maintenance fee will be charged.

Closures shall be carried out such that all applicable regulations from the following agencies are complied with: Los Angeles County, Department of County Engineer - Facilities; Los Angeles County Fire Department, Fire Prevention Division or the appropriate City Fire Department; South Coast Air Quality Management District; and Los Angeles County Department of Health Services.

2. The County Engineer and Fire Departments shall be notified in advance of any closure in accordance with the following:

- a. Removal of tank shall require a three (3)-business day advance notification.
- b. Permanent closure of a tank in place or a temporary closure shall require a 30-written notification.

3. Consult current fee schedule for costs.

4. All abandoned wells shall be destroyed in such a way that they will not produce water or act as a channel for interchange of water, when such interchange may result in deterioration of the quality of water in any or all water bearing formations penetrated, or present a hazard to the safety and well-being of people and animals.

5. A well destruction permit issued by the Los Angeles Department of Health Services shall be required for all wells requiring a permit for their initial construction.

6. Well destruction shall be accomplished according to methods described in the latest "Water Well Standards: State of California" by the Department of Water Resources, contained in Bulletin 74 - 81, December 1981, or any other methods that will provide equivalent or better protection.

7. Plans for the decontamination of a facility shall be submitted to the County Engineer for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies are the California Regional Water Quality Board, the Los Angeles County Department of Health Services, and the South Coast Air Quality Management District.

8. Decontamination shall require the following, as a minimum:

STATE OF CALIFORNIA
California Regional Water Quality Control Board
Los Angeles Region
(Underground Storage Tank Program)

General Laboratory Testing Requirements for Petroleum Hydrocarbon Impacted Sites

The purpose of this document is to supplement the Regional Board's Laboratory Report Form (6/00) in order to update obsolete testing requirements and set forth the new requirements for fuel oxygenates and natural attenuation testing. Each analytical method used must be certified by the California Environmental Accreditation Laboratory Program (ELAP).

1. General Laboratory QA/QC Requirements

Conform to the Regional Board's Laboratory Report Form (6/00) in general, except for items specified below.

2. Compounds to be Tested

Total petroleum hydrocarbons in gasoline range (TPHg) (C4 – C12); Total petroleum hydrocarbons in diesel range (TPHd) (C13 – C22); benzene, toluene, ethylbenzene, xylenes (BTEX); methyl tertiary butyl ether (MTBE); di-isopropyl ether (DIPE); ethyl tertiary butyl ether (ETBE); tertiary amyl methyl ether (TAME); tertiary butyl alcohol (TBA). If the gasoline tanks historically or currently contain methanol or ethanol, these compounds are also to be tested.

3. Analytical Test Methods and Detection Limits

Conform to Table 1 below. Report any concentration detected between the method detection limit (MDL) and estimated quantitation limit (EQL) (or reporting limit (RL)) in a numerical value with a "J" flag indicator. All "Non-Detect" (ND) shall be reported in the format with "< (numerical MDL)." Integrate all fuel oxygenate additive concentrations into total petroleum hydrocarbons (TPH) and report it as TPH. EPA Method 8021B may be used to substitute EPA Method 8260B at the sites where all fuel oxygenates have not been identified by EPA Method 8260B in soil and/or groundwater.

4. Use of EPA Method 5035 for Soil Samples

Apply EPA Method 5035A specified in the USEPA SW-846, (7/2002) for soil sample preparation and preservation in order to minimize volatile organic losses. Use the sample collection devices, or equivalent, specified in the method (e.g., the Encore™ sampler). If the Encore™ sampler is used, analyze sample within 48 hours from the collection. Analyze sample within 14 days for soil samples stored under frozen conditions.

5. Natural Attenuation Parameters

Natural attenuation processes include dispersion, dilution, sorption, volatilization, biodegradation, and chemical or biological transformation. A carefully controlled monitoring program for the natural attenuation can be used to confirm site-specific mass reduction and achieve remedial objectives. In order to test parameters to confirm the occurrence of natural attenuation, site characterization must be complete first.

5.1 Primary Natural Attenuation Criteria

Meet the following conditions prior to testing for the secondary natural attenuation parameters:

- a) Groundwater contaminant plume must be fully defined.
- b) Groundwater monitoring program on a quarterly basis must be completed for at least two years including data of MTBE and other oxygenates.
- c) Groundwater concentration has consistently decreased or been stable.
- d) Determination of site-specific hydraulic conductivity must be conducted: Refer the ASTM D4044-91 for the slug test procedures. Other field methods (e.g., pumping test) are also acceptable to determine hydraulic conductivity.
- e) Characterization of MTBE and other oxygenates plume vertical extent must be completed with discrete multi-depth groundwater sampling at all groundwater vulnerable areas designated by the Board.

5.2 Secondary Natural Attenuation Parameters

Analyze the secondary natural attenuation parameters only after the primary natural attenuation criteria are met. Analyze the secondary natural attenuation parameters at all groundwater monitoring wells inside and outside of the plume. Conform to Table 2 below for parameters and testing methods.

Article 2. - ELECTRONIC SUBMITTAL OF INFORMATION

Section 3891. Definition of Terms

"COELT" is the United States Army Corps of Engineers Loading Tool program. It is a relational database application that is designed to run with the Microsoft Windows operating system. COELT places laboratory data into the standardized Electronic Deliverable Format (EDF). The program can accept data from Laboratory Information Management System (LIMS) or manually entered data. COELT is an optional software application that is intended to help laboratories that require new software to produce the EDF data deliverable. COELT includes a report utility that allows hard copy laboratory reports to be printed that match the actual electronic data. For purposes of the requirements of this chapter, version 1.2a of COELT may be used. The program (coelt12i.exe) and documents (coelt 1.2i manual.zip) for version 1.2i of COELT are available through links provided at <http://www.waterboards.ca.gov/ust> "CSRS-H" is the California Spatial Reference System-Horizontal, which includes the High Precision Geodetic Network (HPGN), the High Precision Geodetic Network-Densification (HPGN-D) and other geodetic control positions. These control positions have been determined by Global Positioning System survey methods in accordance with first order or better standards and specifications from the Federal Geodetic Control Subcommittee (FGCS) of the Federal Geographic Data Committee. These control positions are published by the National Geodetic Survey, California Spatial Reference Center or its successor.

“EDCC” is the Electronic Deliverable Consistency Checker program, which was developed for the EDF1.2i format, described below. The EDCC program is run upon completion of an EDF report and produces an error report. This error report identifies problems within the given data set based upon the EDF database structure, guidelines, restrictions, and valid values. The error report also indicates the nature of each problem, so that the submitter can correct them. For purposes of the requirements of this chapter, the interactive web-version 1.2i or personal computer version 1.2i of EDCC shall be used. Programs (edcc.zip and edccservicepac1.zip) for version 1.2i of EDCC are available through links provided at <http://www.waterboards.ca.gov/ust>.

“EDF” is the Electronic Deliverable Format, originally developed for the United States Army Corps of Engineers. It is a data standard designed to facilitate transfer of electronic data files from analytical laboratories to end-users. It is a relational database whose files are related to one another through key fields. Laboratories can produce electronic EDF files by using their own LIMS or COELT software. The data components include chain-of custody information, laboratory results, and quality assurance information. For purposes of the requirements of this chapter, version 1.2i of EDF shall be used. Specifications for version 1.2i of EDF (The Electronic Deliverable Format [EDF] Version 1.2i data dictionary are available in Title 27, Division 3, Subdivision 2, Chapter 1 (Laboratory Results) CCR, through links provided at <http://www.waterboards.ca.gov/ust>.

“Geotracker” is the State Board’s Internet-accessible database system used by the State Board, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. This system consists of a relational database, on-line compliance reporting features, a geographical information system (GIS) interface and other features that are utilized by the State Board, regional boards, local agencies, regulated industry and the public to input, manage, or access compliance and regulatory tracking data. Geotracker, initially known as the Geographical Environmental Information Management System (GEIMS) database, is available at <http://geotracker.swrcb.ca.gov/>.

“PDF” means Portable Document Format. “PDF” files are self-contained and cross-platform documents. A PDF file will look the same on the screen and in print, regardless of what type of computer or printer a person uses or which software package originally created the file. Although PDF files contain the complete formatting of the original document, including fonts and images, they are highly compressed, allowing efficient transfer of complex information.

“Permanent monitoring well” means any artificial excavation by any method made for the purpose of monitoring fluctuations in groundwater levels, the quality of groundwater, or the concentration of contaminants in groundwater and which is used for at least thirty days.

“Report” means any document or item that is required for submittal in order for a person to comply with a regulation, directive, or order issued by the State Board, a regional board, or a local agency, including but not limited to, any analysis of material by a laboratory that has accreditation or certification pursuant to Article 3 (commencing with Section 100825) of Chapter 4 of Part 1 of Division 101 of the Health and Safety Code.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13195 (b) and 13196, Water Code.

Section 3892. Reports

The following reports are subject to the requirements of this Chapter, when those reports are required for the purpose of subsurface investigation or remediation of: (1) an unauthorized discharge or deposit of waste as defined in section 13050 of the Water Code, (2) an unauthorized release of a hazardous substance as defined in section 25281 of the Health and Safety Code, or (3) a discharge of waste to land subject to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the California Code of Regulations (CCR).

- (a) Reports submitted pursuant to Division 3, Chapter 16, Article 11 of Title 23 of the CCR.
- (b) Reports submitted pursuant to Division 2 of Title 27 or Division 3, Chapter 15 of Title 23 of the CCR.
- (c) Reports submitted pursuant to section 13304 of the Water Code.
- (d) Reports submitted pursuant to section 13267 of the Water Code.
- (e) Reports submitted pursuant to any order or directive of the State Board, a regional board or a local agency.
- (f) Reports submitted pursuant to the Two-year Joint Cooperative Agreement Execution Plans under the Defense / State Memorandum of Agreement and Navy Cost Recovery Cooperative Agreement, for the State of California.

Authority cited: Sections 13196 and 13198 (c), Water Code.

Reference: Sections 13196 (a) and 13198 (c), Water Code.

Section 3893. Electronic Submittal of Reports

(a) Persons responsible for submitting reports pursuant to this Chapter shall submit the following information described in subdivision (b) electronically over the Internet to the State Board's Geotracker system in conformance with data dictionaries found in Title 27, Division 3, Subdivision 2 (Monitoring and Release Information) and specifications contained in the State Water Resources Control Board EDF Guidelines and Restrictions (version 1.2i) and Survey XYZ Guidelines and Restrictions (Version 6). These data dictionaries and documents are available through links provided at <http://www.waterboards.ca.gov/ust>.

(b) Data generated after the effective date of the regulations by chemical analysis of soil, vapor, or water samples (including surface water, groundwater and influent/effluent water samples from remediation systems), shall be submitted in EDF format. All data submitted in EDF format shall be checked for errors prior to and during submittal using the EDCC software consistency-checking tool. All data submitted in EDF format must pass this error-checking tool as well as meet normal regulatory requirements in order to be considered valid data. In addition, when required for reports subject to this Chapter, the following shall also be submitted electronically:

- (1) The latitude and longitude of any permanent monitoring well for which data is reported in EDF format, accurate to within 1 meter and referenced to a minimum of two reference points from the California Spatial Reference System (CSRS-H), if available.

Lahontan Regional Water Quality Control Board

February 10, 2020

Geoffrey Grice, Senior Associate
Costco Wholesale Corporation c/o MG2
1101 Second Avenue, Suite 100
Seattle, Washington 98101

No Further Action Required for Costco Gasoline Station No 762, 1051 West Avenue L, Lancaster, Los Angeles County, UST 6B1920040T

The Lahontan Regional Water Quality Control Board finds the release of petroleum products at this site poses a low threat to human health, safety, and the environment, and concludes the site meets the criteria of the Water Quality Control Policy for Low-Threat Underground Storage Tank (UST) Case Closure.

This letter confirms the completion of a site investigation for the UST-related equipment replaced at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the investigation are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation carried out at your UST site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required at this time. This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

Claims for reimbursement of corrective action costs submitted to the UST Cleanup Fund more than 365 days after the date of this letter or issuance of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

PETER C. PUMPHREY, CHAIR | PATTY Z. KOUYOUMDJIAN, EXECUTIVE OFFICER

Please note that the finding of No Further Action Required is not a conclusion that all petroleum hydrocarbons have been removed and does not relieve the responsible parties of potential liability associated with remaining petroleum hydrocarbons. Should the conditions at the site be shown to be a significant threat to health, safety or the environment, or land use changes, no further action required (NFAR) status may be rescinded and additional actions may be required.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/24/2023 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/24/2023 has revealed that there are 7 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset, as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

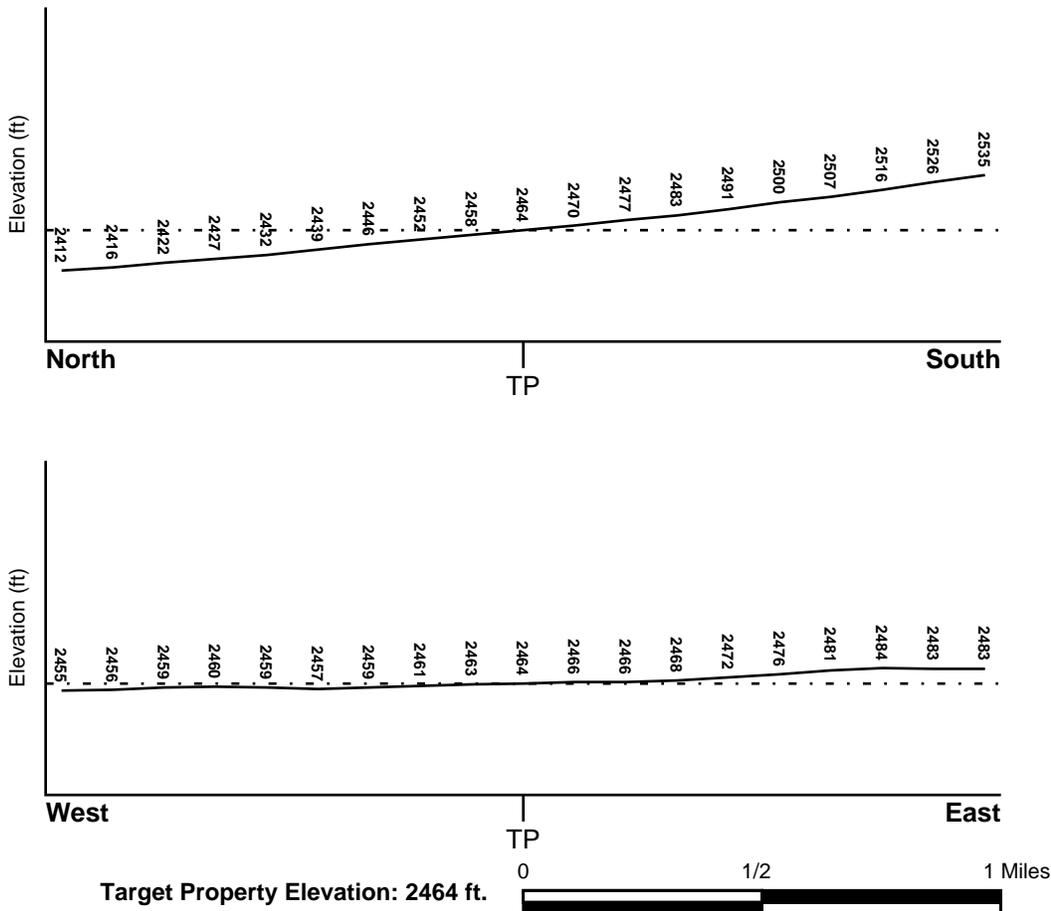

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
