

# Summary Form for Electronic Document Submittal

**Form F**

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Decoto Reservoir Seismic Improvements and Roof Replacement

Lead Agency: Alameda County Water District

Contact Name: Carlos Sempere

Email: carlos.sempere@acwd.com

Phone Number: 510-304-2525

Project Location: Fremont

*City*

Alameda

*County*

Project Description (Proposed actions, location, and/or consequences).

The Alameda County Water District (District) proposes to replace the roof of, and seismically retrofit, the Decoto Reservoir. The project is located in Fremont, CA, at the end of Florence Street, Union City, CA. The seismic upgrade of the reservoir would include the construction of interior special concrete moment frames, new timber roof framing, and a new structural roof deck. The project would also include a new reservoir liner, insulated metal roof, inlet/outlet and drain valves, mechanical ventilation, and interior lighting. Construction would occur between late 2024 and early 2026.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The potentially significant impacts resulting from project work could occur on the following resources: Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Noise, and Tribal Cultural Resources.

The project would have a less than significant impact on each resource with the incorporation of mitigation measures defined in the Initial Study/Mitigated Negative Declaration. The mitigation measures include dust and engine emissions control, conducting a burrowing owl survey prior to construction, conducting a nesting bird survey if construction activities occur during nesting bird season (February 1 to August 31), the installation of silt fencing to protect a vegetated drainage area near the site's access road, protection of riparian vegetation, conducting cultural awareness training in coordination with a tribal cultural representative prior to construction, the monitoring of ground-disturbing activities by an archaeologist, temporarily halting work if fossils are discovered, implementing measures to reduce impacts from hazardous materials, and implementing noise reduction measures during construction.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

No areas of controversy are known at this time.

Provide a list of the responsible or trustee agencies for the project.
