The project is the planned seismic retrofit of the Douglas Drive Bridge. The retrofit would consist of extending existing partial scour walls located at the base of the piers supporting the bridge. The existing scour walls would be extended to the bridge soffit by constructing new infill walls between the columns of the piers. The project would also install pipe seat extenders at both hinges in the superstructure.

In addition, two pre-cast concrete flumes would be installed between selected bridge piers to provide fish passage through the riprap underneath the bridge.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

Reviewing Agencies Checklist

Lead Agencies may recommend State Clearinghouse distribution by marking agencies below with an "X".
If you have already sent your document to the agency please denote that with an "S".
