

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Big Bear Municipal Water District Special Use Boat Launch & Deepening Project

Lead Agency: Big Bear Municipal Water District

Contact Name: Jared Cheek

Email: jcheek@bbmwd.net Phone Number: (909) 866-5796

Project Location: Big Bear Lake San Bernardino
City *County*

Project Description (Proposed actions, location, and/or consequences).

The Big Bear Municipal Water is proposing the project to remove approximately 14,000 cubic yards of sediment from approximately 2.6 acres of the Big Bear Lake-bottom to dredge the West Navigation Channel that would provide access for District boats and other recreational boaters. The dredging would also support implementation of a proposed special use boat launch facility for the District and first responder operations and support the overall project objective of improving access to the Lake. Equipment and spoils from dredging and additional sediment removed to construct the special use boat launch facility would be stored on a vacant parcel adjacent to the District Headquarters. The project area would be closed to the public during construction activities; however, use of the existing boat launch facility immediately north of the District Headquarters and the Marina boat dock/slips would be available for use. Construction would begin in late summer or early fall and is expected to take approximately 20 weeks.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The project would result in potential significant impacts to biological resources, cultural resources, geology and soils, hazards and hazardous materials, and tribal cultural resources without the implementation of mitigation measures. With mitigation, all potentially significant impacts would be reduced to less-than-significant levels. Mitigation measures include minimizing and compensating for the loss of riparian vegetation, compensating for permanent fill of Waters of the US and Waters of the State, addressing previously undiscovered historic resources, archaeological resources, and tribal cultural resources, avoiding potential effects on undiscovered burials, preparing and implementing a Storm Water Pollution Prevention Plan, implementing erosion control best management practices (BMPs), implementing BMPs to minimize potential releases of hazardous materials, BMPs for wildland fire prevention, and preparing and implementing a fire safety plan.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

No areas of controversy

Provide a list of the responsible or trustee agencies for the project.

United States Army Corps of Engineers
National Marine Fisheries Service
United States Fish and Wildlife Service
State Historic Preservation Office
Santa Ana Regional Water Quality Control Board
California Department of Fish and Wildlife
