Project Description (Proposed actions, location, and/or consequences).

As a mechanism to mitigate for the impacts associated with this shallow groundwater, HMRD and SLCC plan to implement a two-tiered program consisting primarily of (1) elimination of seepage losses through infrastructure improvement projects including lining and piping of canals and (2) shallow groundwater pumping. For shallow groundwater pumping, the groundwater will be pumped from the upper water table through a series of existing shallow wells and conveyed through HMRD's existing water delivery system for use within the Company's service area.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

HMRD has determined that the project will not have a significant effect on the environment.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

HMRD has determined that the project will not have a significant effect on the environment.

Provide a list of the responsible or trustee agencies for the project.
