

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

SCH #: _____

Project Title: Reservoir 20B Project

Lead Agency: Dublin San Ramon Services District

Contact Name: Jason Ching, PE

Email: ching@dsrsd.com

Phone Number: 925-875-2263

Project Location: Dublin
City

Alameda
County

Project Description (Proposed actions, location, and/or consequences).

The Reservoir 20B Project would involve installation of a pre-stressed concrete reservoir with a water storage capacity of 1.3 million gallons (DSRSD will determine a final optimal reservoir capacity). The reservoir would have a diameter of approximately 102 feet and footprint of approximately 17,500 square feet, and would be located underground at the top of a hill within the project site. At this location, the reservoir would have a similar elevation to the existing Reservoir 20A, located approximately 1.4 miles northwest of the project site, so that the hydraulic gradient throughout the District's Zone 20 system remain consistent. The project would involve installation of an access staircase, 425-foot storm drain pipeline, and a 1,000-foot water supply main pipeline. The project would also include a sewer connection to the sewer system planned for the surrounding East Ranch Development, and a future access road. Although the access road would not be constructed at this time, it is considered in this IS-MND. Construction is anticipated to occur over 15 months.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The project would require mitigation measures for air quality, biological resources, cultural resources, paleontological resources, and tribal cultural resources. These measures would reduce all potentially significant impacts to less than significant.

See attached page for additional details.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

None known at this time.

Provide a list of the responsible or trustee agencies for the project.

The District has sole approval authority regarding the proposed project and this related IS-MND.

An Incidental Take Permit from the California Department of Fish and Wildlife may be required for project construction purposes pursuant to California Fish and Game Code Section 2081.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid the effect.

- **Mitigation Measure AQ-1** requires implementation of Bay Area Air Quality Management District basic construction mitigation measures to reduce potential air quality impacts to less than significant.
- **Mitigation Measure AQ-2** requires the use of Tier 4 engines in construction equipment during construction to reduce potential air quality impacts to less than significant.
- **Mitigation Measure BIO-1** requires the preparation and implementation of a Worker Environmental Awareness Program to aid construction workers in recognizing special-status species to reduce potential biological impacts to less than significant.
- **Mitigation Measure BIO-2** requires pre-construction surveys for California red legged frog and California tiger salamander to reduce potential biological impacts to less than significant.
- **Mitigation Measure BIO-3** requires pre-construction surveys for burrowing owls, raptors, and other nesting birds and impact avoidance measures to reduce potential biological impacts to less than significant.
- **Mitigation Measure CUL-1** requires halting work and evaluating unanticipated discoveries of archaeological resources to reduce potential cultural resources impacts to less than significant.
- **Mitigation Measure GEO-1** requires preparation and implementation of a Worker Environmental Awareness Program and halting work and evaluating unanticipated discoveries of paleontological resources to reduce potential paleontological resources impacts to less than significant.
- **Mitigation Measure TCR-1** requires implementation of a Worker Environmental Awareness Program to aid construction workers in recognizing tribal cultural resources to reduce potential tribal cultural resources impacts to less than significant.
