

**Summary Form for Electronic Document Submittal****Form F**

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Description (Proposed actions, location, and/or consequences).

The project would involve removing an existing sixty (60) inch diameter corrugated metal pipe (CMP) culvert at the site, and replacing it with a seven (7) foot, eleven (11) inch by five (5) foot, seven (7) inch aluminum multi-plate arch pipe culvert, commonly referred to as a "squash pipe culvert". The existing culvert is corroded, and several holes have formed. The new culvert would be backfilled with slurry with a six (6) inch layer of slurry on top of the new pipe. A one (1) foot thick layer of road base would be placed forming a gravel road over the new culvert. The gravel road approaches to the culvert would have a five (5) percent slope.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

Impacts to the stream channel and riparian vegetation surrounding the culvert may occur during construction. Special status species may be present on the site during construction and could be impacted by construction activities. Several mitigation measures would avoid or reduce these impacts, including avoidance of breeding seasons, ad hoc pre-construction surveys, contractor education, avoidance of rain events, avoidance of disturbance to special status species potential habitat, requirements of the Regional Water Board, and requirements of the Lake and Streambed Alteration Agreement (LSAA), including a revegetation plan for riparian vegetation.

Unanticipated discovery of cultural resources could occur during construction. A mitigation measure would require archaeological and tribal monitoring during ground disturbance to prevent unanticipated discoveries.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

None.

Provide a list of the responsible or trustee agencies for the project.
