

COUNTY CLERK'S USE

**CITY OF LOS ANGELES**

OFFICE OF THE CITY CLERK  
200 NORTH SPRING STREET, ROOM 395  
LOS ANGELES, CALIFORNIA 90012

**CALIFORNIA ENVIRONMENTAL QUALITY ACT**

**NOTICE OF EXEMPTION**

(PRC Section 21152; CEQA Guidelines Section 15062)

Pursuant to Public Resources Code § 21152(b) and CEQA Guidelines § 15062, the notice should be posted with the County Clerk by mailing the form and posting fee payment to the following address: Los Angeles County Clerk/Recorder, Environmental Notices, P.O. Box 1208, Norwalk, CA 90650. Pursuant to Public Resources Code § 21167 (d), the posting of this notice starts a 35-day statute of limitations on court challenges to reliance on an exemption for the project. Failure to file this notice as provided above, results in the statute of limitations being extended to 180 days.

# JUSTIFICATION FOR PROJECT EXEMPTION CASE NO. ENV-2023-7799-CE

---

## Project Description

The project includes the demolition of an existing single-family dwelling, garage, and pool with a total square footage of 3,278 square feet, and the construction of a new two-story, single-family dwelling with a basement, attached garage, new retaining walls, and a new pool, with a total residential floor area of 5,103.5 square feet. The project site is on a lot that is approximately 18,053 square feet located at 1733 North Doheny Drive and is within the Hollywood Community Plan. The single-family dwelling is proposed to have a building height of 16 feet.

In conjunction with the construction of a new two-story, single-family dwelling, the project requests the approval of a haul route for the export of approximately 2,780 cubic yards of earth. Construction of the project will require grading (BHO exempt and non-exempt) consisting of a total cut of 2,504 cubic yards of soil and a total fill of approximately 87 cubic yards of soil, resulting in total export of 2,780 cubic yards of soil with a 25% bulk and swell factor already accounted for.

Additionally, the project proposes the following haul route:

Location of Staging Area: 1733 North Doheny Drive

Location of Disposal Site for Exported Soil: Scholl Canyon Landfill

Loaded Trucks: Right onto Doheny Drive; Right onto Flicker Way; Right onto Cory Avenue; Left onto Sunset Boulevard; Left onto La Brea Avenue; Right onto Franklin Avenue; Left onto Highland Avenue; Left onto Cahuenga Boulevard; Right onto Barham Boulevard; Right onto Forest Lawn Drive; Right onto CA-134 E Fwy; Exit 11 to North Figueroa Street; Right onto Figueroa Street; Continue onto Scholl Canyon Road to Scholl Canyon Landfill.

Emptied Trucks: Scholl Canyon Landfill; Continue onto Scholl Canyon Road; Left onto CA-134 E Fwy; Exit 4 for Forest Lawn Drive; Left onto Barham Boulevard; Left onto Cahuenga Boulevard; Continue onto Highland Avenue; Right onto Franklin Avenue; Left onto La Brea Avenue; Right onto Sunset Boulevard; Right onto Doheny Drive to project site.

**CEQA Determination – Class 1 and 3 Categorical Exemptions Apply**

A project qualifies for Class 1 Categorical Exemptions if it consists of the demolition of one single-family residence; and a project qualifies for Class 3 Categorical Exemptions if it consists of the following: demolition and removal of one single-family residences and accessory (appurtenant) structures including, garages, carports, patios swimming pools, and fences; and the construction and location of a limited number of new, small facilities or structures, which include one single-family residence and accessory (appurtenant) structures including garages, carports, patios, swimming pools, and fences. As the project proposes the demolition of a single-family residence, garage, and pool, along with the construction of a single-family residence and new pool, it meets the qualifications of both Class 1 and Class 3 Categorical Exemptions.

The Director of Planning determined that, based on the whole of the administrative record, the project is exempt from CEQA pursuant to State CEQA Statutes and Guidelines, Section 15301 (Class 1) and Section 15303 (Class 3) and that there is no substantial evidence demonstrating that an exception to a Categorical Exemption pursuant to CEQA Guidelines, Section 15300.2 applies.

**CEQA Section 15300.2: Exceptions to the Use of Categorical Exemptions.**

The City has considered whether the proposed project is subject to any of the six (6) exceptions that would prohibit the use of a categorical exemption as set forth in State CEQA Guidelines Section 15300.2. The six (6) exceptions to this Exemption are: (a) Location; (b) Cumulative Impacts; (c) Significant Effect; (d) Scenic Highways; (e) Hazardous Waste Sites; and (f) Historical Resources.

**(a) Location.** *Classes 3, 4, 5, 6, and 11 are qualified by consideration of where the project is to be located – a project that is ordinarily insignificant in its impact on the environment may in a particularly sensitive environment be significant. Therefore, these classes are considered to apply in all instances, except where the project may impact on an environmental resource of hazardous or critical concern where designated, precisely mapped, and officially adopted pursuant to law by federal, state, or local agencies.*

The subject site is located within a Hillside Construction Regulation (HCR) District, Hillside Area, the Hollywood Fault Zone, a Very High Fire Hazard Severity Zone, Urban Agriculture Incentive Zone, and a Special Grading Area (BOE Basic Grid Map A-13372); however, specific Regulatory Compliance Measures (RCMs) in the City of Los Angeles regulate the grading and construction of projects in these sensitive locations and will reduce any potential impacts to less than significant. The following specific RCMs would apply to the proposed project:

- **Regulatory Compliance Measure RC-GEO-1 (Seismic):** The design and construction of the project shall conform to the California Building Code seismic standards as approved by the Department of Building Safety.
- **Regulatory Compliance Measure RC-GEO-2 (Hillside Grading Area):** The grading plan shall conform with the City's Landform Grading Manual guidelines, subject to approval by the Advisory Agency and the Department of Building and Safety's Grading Division. Appropriate erosion control and drainage devices shall be provided to the satisfaction of the Building and Safety Department. These measures include interceptor terraces, berms, vee-channels, and inlet and outlet structures, as specified by Section 91.7013 of the Building Code, including planting fast-growing annual and perennial grasses in areas where construction is not immediately planned.

- **Regulatory Compliance Measure RC-GEO-5 (Subsidence Area):** Prior to the issuance of building or grading permits, the applicant shall submit a geotechnical report prepared by a registered civil engineer or certified engineering geologist to the written satisfaction of the Department of Building and Safety. The geotechnical report shall assess potential consequences of any subsidence and soil strength loss, estimation of settlement, lateral movement or reduction in foundation soil-bearing capacity and discuss mitigation measures that may include building design consideration. Building design considerations shall include, but are not limited to: ground stabilization, selection of appropriate foundation type and depths, selection of appropriate structural systems to accommodate anticipated displacements or any combination of these measures. The project shall comply with the conditions contained within the Department of Building and Safety's Geology and Soil Report Approval Letter for the proposed project, and as it may be subsequently amended or modified.
- **Regulatory Compliance Measure RC-GEO-6 (Expansive Soils Area):** Prior to the issuance of grading or building permits, the applicant shall submit a geotechnical report, prepared by a registered civil engineer or certified engineering geologist, to the Department of Building and Safety, for review and approval. The geotechnical report shall assess potential consequences of any soil expansion and soil strength loss, estimation of settlement, lateral movement, or reduction in foundation soil-bearing capacity, and discuss mitigation measures that may include building design consideration. Building design considerations shall include, but are not limited to: ground stabilization, selection of appropriate foundation type and depths, selection of appropriate structural systems to accommodate anticipated displacements or any combination of these measures. The project shall comply with the conditions contained within the conditions contained within the Department of Building and Safety's Geology and Soils Report Approval Letter for the proposed project, and as it may be subsequently amended or modified.

These RCMs have been historically proven to work to the satisfaction of the City Engineer to reduce any potential impacts from the specific environment in which the project is located. In addition, all haul route applications require the submittal of a Geology and Soils Report to the Los Angeles Department of Building and Safety (LADBS). A Geology and Soils Report Approval Letter, Log No. 126729-01, for the subject property, which details conditions of approval that must be followed, was issued by LADBS on April 5, 2024. In addition, roof and site drainage as well as sewer availability must comply with Bureau of Engineering and Bureau of Sanitation standards; and hydrants, Fire Department Access, and Fire Safety must be reviewed and approved by the Los Angeles Fire Department before permits can be issued. Due to its location within a Very High Fire Hazard Severity Zone, the project must also comply with the Brush Clearance Requirements of the Fire Code. Furthermore, the project must comply with the Baseline Hillside Ordinance and is subject to the Hillside Construction Regulation District (Ordinance No. 184,827). Therefore, in conjunction with the above RCMs and compliance with other applicable regulations, the location of the project will not result in a significant impact based on its location.

**(b) Cumulative Impacts.** *All exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant.*

According to the data pulled from Navigate LA on July 2, 2024, there are no other properties with active haul routes in within 500 feet of the subject property. However, there are two pending Haul Route permits located at 9212-9214 West Nightingale Drive and 1800 North Marcheeta Place. As these permits have not been approved, the construction timeline is

unknown for this project. If all projects were approved at the same time, it is unlikely that this would result in a cumulative impact for the reasons below.

In light of the increase in construction activity in Grading Hillside Areas and the increase in associated truck traffic related to the import and export of soil, a haul route monitoring program is being implemented by the Department of Building and Safety for Council Districts 4 and 5 for added enforcement to ensure safety and to protect the quality of life of area residents. As part of this program, a haul route monitor is assigned to a geographic area to monitor haul routes and keep track of daily activities in order to minimize impacts to neighboring residents. Haul routes are tracked via a Map for each district to identify the locations of construction sites for which a haul route was required.

In addition, the haul route approval will be subject to recommended conditions prepared by Los Angeles Department of Transportation (LADOT) to be considered by the Board of Building and Safety Commissioners that will reduce the impacts of construction-related hauling activity, monitor the traffic effects of hauling, and reduce haul trips in response to congestion.

According to SCAQMD, individual construction projects that do not exceed the SCAQMD's recommended daily thresholds for project-specific impacts would not cause a cumulatively considerable increase in emissions for those pollutants for which the Air Basin is in nonattainment. Interim thresholds were developed by DCP staff based on the CalEEMod model runs relying on reasonable assumptions, consulting with AQMD staff, and surveying published air quality studies. For this reason, it can be assumed that construction-related daily emissions at the project site would not exceed SCAQMD's regional or localized significance thresholds. Therefore, the project's contribution to cumulative construction-related regional emissions would not be cumulatively considerable and therefore would be less than significant. Construction of the project would also have a less-than-significant impact with regard to localized emissions.

As noise is a localized phenomenon and decreases in magnitude as distance from the source increases, only projects and ambient growth in the nearby area could combine with the proposed project to result in cumulatively considerable noise impacts. Therefore, the project is not likely to result in a significant cumulative impact due to the construction of the same type of development in the same place over time.

Therefore, in conjunction with Citywide RCMs and compliance with other applicable regulations, no foreseeable cumulative impacts are expected.

- (c) Significant Effect.** *A categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances.*

The project proposes the demolition of a single-family dwelling, garage, and pool, and the construction of a two-story 5,103.5 square-foot single-family dwelling with a basement, an attached garage, and a new pool. The single-family dwelling is proposed to have a building height of 16 feet and 5,103.5 square feet of Residential Floor Area (RFA).

The project proposes to construct a single-family dwelling in an area zoned and designated for such development. The surrounding neighborhood is comprised of lots that are uniquely shaped and range in size from 17,000 to 29,000 square feet with similar slopes and topography to the subject site. The site of the current project is developed with an existing single-family dwelling, which was constructed originally in 1962. The built structure on the

site is proposed for demolition to consequently develop a new two-story single-family dwelling with an attached garage, and a new pool. The site is zoned as RE15-1-H-HCR and designated as Very Low II Residential, as are all the surrounding and adjacent properties. The size of the proposed project (5,103.5 square feet of Residential Floor Area) is similar in size to the adjacent lots, which range from 4,304 to 7,070 square feet. The location of the building pad for the proposed project is already largely disturbed and developed with the existing single-family dwelling.

According to the Tree Disclosure Statement signed and dated on October 9, 2023, by the Property Owner, Zachary Ersoff, there are no protected trees or shrubs onsite. There are thirty (30) Non-Protected Significant Trees onsite recommended for removal – one Aleppo Pine, one Rubber Tree, one Evergreen Pear, one Brazilian Pepper, one Sweetgum, two Eugenia, two Chinese Elm, one Pink Melaleuca, and twenty Indian Laurel Fig, most of which are in poor, nearly dead, or dead condition. According to the Owner's Declaration of Biological Resources signed and dated on October 9, 2023 by the owner, the project site does not contain any biological resources. While the site is previously undisturbed, it is surrounded by development and therefore is not, and has no value as, a habitat for endangered, rare or threatened species. There are no unusual circumstances which may lead to a significant effect on the environment and this exception does not apply.

- (d) Scenic Highways.** *A categorical exemption shall not be used for a project which may result in damage to scenic resources, including but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway officially designated as a state scenic highway.*

The only State Scenic Highway within the City of Los Angeles is the Topanga Canyon State Scenic Highway, State Route 27, which travels through a portion of Topanga State Park, located approximately 11 miles to the west of the site. Therefore, the project will not result in damage to any scenic resources, including but not limited to, trees, historic buildings, rock outcroppings, or similar resources, within a highway officially designated as a state scenic highway, and this exception does not apply.

- (e) Hazardous Waste.** *A categorical exemption shall not be used for a project located on a site which is included on any list compiled pursuant to Section 65962.5 of the Government Code.*

According to Envirostor, the State of California's database of Hazardous Waste Sites, neither the project site, nor any site in the vicinity, is identified as a hazardous waste site. Furthermore, the building permit history for the project site does not indicate the project site may be hazardous or otherwise contaminated.

- (f) Historic Resources.** *A categorical exemption shall not be used for a project which may cause a substantial adverse change in the significance of a historical resource.*

The project site has not been identified as a historic resource by local or state agencies, and the project site has not been determined to be eligible for listing in the National Register of Historic Places, California Register of Historical Resources, the Los Angeles Historic-Cultural Monuments Register, and/or any local register; and was not found to be a potential historic resource based on the City's HistoricPlacesLA website or SurveyLA, the citywide survey of Los Angeles. The Department of City Planning's Office of Historic Resources confirmed that the existing single-family dwelling is not considered historic for the purposes of CEQA. Consequently, the project will not result in a substantial adverse change to the significance of a historic resource and this exception does not apply.
