Project Description (Proposed actions, location, and/or consequences).

The proposed Remedial Action Plan (RAP) for the remediation of chemicals of potential concern (COPCs) in soil at Boorman Park (Site). The remedial action would involve capping and institutional controls, excavation, soil stabilization, and offsite disposal. This remedial action was selected because it is the most effective and acceptable alternative for achieving the site Remedial Action Objectives, which consist of minimizing or eliminating potential exposure of site receptors to COPCs; reducing the human health-based risks associated with onsite COPCs in soil and groundwater so that the site is acceptable for restricted land use; and remediating impacted site media so that COPCs are either below their respective remediation goals or mitigated to protect site receptors.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The proposed project could result in potentially significant impacts to biological resources. Therefore, mitigation measures are recommended as part of the Proposed Project actions to ensure that potential impacts would remain at a less-than-significant level.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

No known project controversy.

Provide a list of the responsible or trustee agencies for the project.

No known responsible or trustee agencies.
