**RANCHO CALIFORNIA WATER DISTRICT
JOAQUIN RANCH PUMP STATION DISINFECTION SYSTEM IMPROVEMENTS
MITIGATED NEGATIVE DECLARATION**

Project: The Joaquin Ranch Pump Station Disinfection System Improvements (the Project) generally consists of construction and operation of chloramination disinfection facilities at the existing Joaquin Ranch Pump Station. The Project also includes demolition and removal of the existing chlorine injection facilities and construction of site access improvements to accommodate tanker trucks for chemical deliveries. A more detailed description of the Project is included in the Project Initial Study, a copy of which is available for review at Rancho California Water District's office, located at 42135 Winchester Road, Temecula, CA 92590 or online at www.ranchowater.com/127/CEQA-Compliance.

Location: The Project site is located at 42581 Vineyard Parkway, which is situated along Vineyard Parkway near the intersection of Vineyard Parkway and Whitaker Way, southwest of Interstate 15, northeast of Murrieta Creek, in the City of Murrieta, Riverside County, California. Figures 1 and 2, copies of which are included with the Initial Study for the Project, depict the location of the Project facilities.

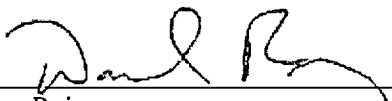

Entity: Rancho California Water District

The District's Board of Directors, having conducted a careful and independent review of the Initial Study for the Project, having reviewed the written comments received prior to the public meeting of the Board, and having heard at a public meeting of the Board the comments of any and all concerned persons or entities, including the recommendation of District staff, does hereby find and declare that the Project will not have a significant effect on the environment. A brief statement of the reasons supporting the Board's findings is as follows:

Construction and operation of the Project as modified will not result in significant adverse impacts upon any threatened or endangered species of plants or animals, nor will it result in damage to or destruction of any significant examples of California history or prehistory or tribal cultural resources. Potential impacts related to biological resources and historical/archaeological/paleontological/tribal cultural resources will be avoided or reduced by adhering to the terms of a Mitigation Monitoring and Reporting Program (see Exhibit A, attached, which is incorporated herein by reference) prior to and throughout construction of the Project.

The Board of Directors hereby finds that the Mitigated Negative Declaration reflects its independent judgment. The Initial Study was prepared by Krieger & Stewart, the District's Consulting Engineer for this project. The Initial Study may be viewed at the office of Rancho California Water District, 42135 Winchester Road, Temecula, CA 92590 or online at www.ranchowater.com/127/CEQA-Compliance.

Date: March 13, 2025

Dan Ruiz
Senior Director of Engineering and Planning
RANCHO CALIFORNIA WATER DISTRICT

MITIGATION MONITORING AND REPORTING PROGRAM
EXHIBIT A TO THE MITIGATED NEGATIVE DECLARATION

Section I – Introduction

Section 21081.6 of the California Environmental Quality Act (CEQA) requires that a mitigation monitoring program be prepared prior to the approval of any project which incorporates mitigation measures as a condition of approval. Mitigation measures are generally adopted to reduce the potentially significant adverse environmental impacts of a project to a level that is less than significant. The mitigation monitoring program must ensure compliance with mitigation measures prior to and during project construction (and, if applicable, during project operation).

Since the project considered by the Initial Study for Rancho California Water District's Joaquin Ranch Pump Station Disinfection System Improvements (Project) incorporates mitigation measures as a condition of approval, this mitigation monitoring and reporting program has been prepared and incorporated into the Mitigated Negative Declaration for the Project.

Section II – Biological Resources Mitigation Measures and Mitigation Monitoring and Reporting Program

As discussed in Issue IV of the Project Initial Study, there is potential for burrowing owl, Cooper's hawk, other nesting bird species, or a combination of the these, to be present on the Project site. Without mitigation, the Project could potentially result in significant adverse impacts upon these bird species. This Mitigation Monitoring and Reporting Program is intended to reduce potential impacts by the Project upon biological resources by specifying methods and procedures for avoiding or reducing such impacts.

The following mitigation measures (**BIO-1 and BIO-2**) will be implemented in order to ensure that construction of Project facilities does not result in a significant adverse impact upon burrowing owl, Cooper's hawk, or other nesting birds. Each measure is attended by a notation of the party responsible for its implementation and of the period for which it will be in effect.

BIO-1: Burrowing Owl

To determine whether burrowing owl is present on the Project site, a preconstruction burrowing owl survey will be conducted by a qualified biologist in accordance with California Department of Fish and Wildlife's 2012 *Staff Report on Burrowing Owl Mitigation*. If burrowing owl is detected during the survey, coordination with the California Department of Fish and Wildlife (CDFW) will be required, including preparation of an impact assessment in accordance with the 2012 *Staff Report on Burrowing Owl Mitigation*. If no burrowing owl is detected during the preconstruction burrowing owl survey, the Project construction may commence. If Project construction does not commence within 14 days after performance of the preconstruction burrowing owl survey, then an additional burrowing owl preconstruction survey will be conducted by a qualified biologist prior to commencement of construction to determine whether burrowing owl have since moved onto the site.

Responsible Party: Rancho California Water District Project Manager (District Project Manager)

Implementation Period: Prior to (and possibly during) Project Construction

BIO-2: Nesting Birds

The Project site contains potentially suitable habitat for nesting bird species. To avoid potential effects to nesting birds, a preconstruction nesting bird survey will be conducted by a qualified biologist no less than 3 days and not more than 7 days prior to any construction activities, including vegetation removal. If no nesting birds are found during the preconstruction survey, then construction may commence within 7 days of completion of the preconstruction survey.

If nesting birds are found during the preconstruction survey, the qualified biologist will establish an exclusionary buffer or buffers around the nests. The buffer(s) will be clearly marked in the field by construction personnel under guidance of the qualified biologist. No construction activities, including vegetation removal, are allowed within the buffer zone(s) until the qualified biologist determines that the young have fledged or the nest is no longer active.

Whether or not any nesting birds were identified during the preconstruction survey, if more than 7 days have lapsed since the preconstruction survey and construction or vegetation removal have not yet commenced, then another preconstruction nesting bird survey will be conducted to determine whether any nesting birds have moved into the site.

Responsible Party: District Project Manager

Implementation Period: Prior to and During Project Construction

Section III – Historical and Archaeological Resources Mitigation Measures and Mitigation Monitoring and Reporting Program

As discussed in Issue V of the Project Initial Study, the Project would not result in an adverse impact upon any known historical or archaeological resources (cultural resources). This Mitigation Monitoring and Reporting Program is intended to avoid or reduce the potential for impacts by the Project upon previously-undiscovered cultural resources that may be present in subsurface soil deposits by specifying methods and procedures for avoiding or reducing such impacts.

The following mitigation measures (**CUL-1 through CUL-5**) will be implemented in order to ensure that construction of Project facilities does not result in significant adverse impacts upon any previously-undiscovered cultural resources that may be uncovered during Project construction. Each measure is attended by a notation of the party responsible for its implementation and of the period for which it will be in effect.

CUL-1: Archaeological Monitoring

Prior to start of construction, the District shall retain a qualified archaeological monitor for all grading, trenching, and other ground disturbance activities. The archaeological monitor shall have the authority to halt or divert construction activities as necessary in the event that suspected archaeological or tribal resources are unearthed during Project construction.

Responsible Party: District Project Manager

Implementation Period: Prior to and During Ground Disturbing Activities

CUL-2: Cultural Resources Worker Sensitivity Training

The Project Archaeologist and the Consulting Tribe(s) shall attend the pre-construction meeting with District representatives, the construction manager, and any contractors and will conduct a mandatory Cultural Resources Worker Sensitivity Training to those in attendance. The training will include a brief review of the cultural sensitivity of the Project site and the surrounding areas; what resources could potentially be identified during earthmoving activities; the requirements of the monitoring program; the protocols that apply in the event inadvertent discoveries of cultural resources are identified, including who to contact and appropriate avoidance measures until the find(s) can be properly evaluated; and any other appropriate protocols. All new construction personnel that begin work on the Project following the initial training and will conduct earthwork or grading activities, must take the Cultural Resources Worker Sensitivity Training prior to beginning work. The Project

Archaeologist and the Consulting Tribe(s) will make themselves available to provide the training on an as-needed basis.

Responsible Party: Project Archaeologist and District Project Manager

Implementation Period: Prior to (and if necessary, During) Ground Disturbing Activities

CUL-3: Inadvertent Finds

If any subsurface cultural resources are encountered during Project construction, construction activities within 100 feet of the encounter shall be halted until the qualified monitors can examine the find, determine its significance, and, if significant, notify the District, Project Archaeologist, and Consulting Tribe(s). Tribal and archaeological monitors will set up a temporary Environmentally Sensitive Area (ESA) fence at the 100-foot boundary. A meeting will be convened between the District, Project Archaeologist, and Consulting Tribe(s) (the parties) to discuss the significance of the find, determine a plan that would reduce potential effects to a level that is less than significant, and implement appropriate mitigation measures. Recommended measures could include but are not limited to the following:

1. Preservation in place;
2. Controlled grading or trenching;
3. Excavation, recovery, and reburial onsite.

If the parties find that any excavated cultural resources meet eligibility requirements for listing on the California Register of Historical Resources or the National Register of Historic Places, plans for the treatment, evaluation, and mitigation of impacts to the find will need to be developed. Prehistoric or historic cultural materials that may be encountered during ground-disturbing activities include:

- Prehistoric flaked-stone artifacts and debitage (waste material), consisting of obsidian, basalt, and/or cryptocrystalline silicates;
- Groundstone artifacts, including mortars, pestles, and grinding slabs;
- Historic-period artifacts such as glass bottles and fragments, cans, nails, ceramic and pottery fragments, and metal objects;
- Historic-period structural or building foundations, walkways, cisterns, pipes, privies, and other structural elements.

Responsible Party: Project Archaeologist and District Project Manager

Implementation Period: During Ground Disturbing Activities

CUL-4: Phase IV Report

Prior to final inspection, the Project Archaeologist shall submit two (2) copies of the Phase IV Cultural Resources Monitoring Report (Phase IV Report) that complies with the District's requirements for such reports. The Phase IV Report shall include evidence of the required Cultural Resources Worker Sensitivity Training that is described in Mitigation Measure CUL-2. The District will review the Phase IV Report to determine adequate mitigation compliance. Provided the Phase IV Report is adequate, two (2) copies of said report shall be submitted to the Eastern Information Center (EIC) at the University of California, Riverside (UCR) or current location, and one (1) copy shall be submitted to the Pechanga Cultural Resources Department.

Responsible Party: Project Archaeologist and District Project Manager

Implementation Period: After Construction and Prior to Final Inspection

CUL-5: Human Remains

In accordance with California Health and Safety Code §7050.5, if human remains are encountered during Project construction, construction will be halted and the County Coroner will be notified of the find immediately. The County Coroner will notify the Native American Heritage Commission, which will determine and notify a Most Likely Descendant (MLD). With the permission of the District, the MLD may inspect the site of the discovery. The MLD shall complete the inspection and make recommendations within 48 hours of being granted access to the discovery site. No further disturbance shall occur until a determination of origin and disposition for the remains has been made pursuant to California Public Resources Code §5097.98.

Responsible Party: District Project Manager

Implementation Period: During Ground Disturbing Activities

Section IV – Paleontological Resources Mitigation Measures and Mitigation Monitoring and Reporting Program

As discussed in Issue VII of the Project Initial Study, a paleontological resources assessment was conducted for the Project site. Based on the paleontological resources assessment report, no paleontological resources or potentially fossiliferous sediments were observed on the Project site, and the Project has a low potential to impact significant, nonrenewable paleontological resources. This Mitigation Monitoring and Reporting Program is intended to avoid or reduce the potential for impacts by the Project upon previously-

undiscovered paleontological resources that may be present in subsurface soil deposits by specifying methods and procedures for avoiding or reducing such impacts.

The following mitigation measure (**PALEO-1**) will be implemented in order to ensure that construction of Project facilities does not result in significant adverse impacts upon any previously-undiscovered paleontological resources that may be uncovered during Project construction. The measure is attended by a notation of the party responsible for its implementation and of the period for which it will be in effect.

PALEO-1: Paleontological Resources

The following measures will be implemented to protect any paleontological resources uncovered during ground disturbance at the Project site:

- If any paleontological resources or suspected paleontological resources are uncovered during Project construction, all work in the vicinity of the discovery shall be halted until a qualified paleontologist can evaluate the nature and significance of the find.
- If a qualified paleontologist determines that a specimen uncovered during Project construction is potentially significant, then all future ground-disturbing actions associated with Project construction will be monitored by a qualified paleontological monitor. The paleontological monitor will be prepared to quickly salvage fossil specimens upon discovery to avoid construction delays and shall have the authority to temporarily halt or divert construction equipment and activities to allow for removal of abundant or large specimens.
- Specimens recovered from the Project site by the qualified paleontological monitor will be, in accordance with standard paleontological practice, identified and curated at a repository with permanent retrievable storage that will allow for additional research in the future.

Responsible Party: Rancho California Water District Project Manager

Implementation Period: During Ground Disturbing Activities

Section V – Tribal Cultural Resources Mitigation Measures and Mitigation Monitoring and Reporting Program

As discussed in Issue XVIII of the Project Initial Study, there are no known tribal cultural resources or other cultural resources on the Project site, and the Project would not result in an adverse impact upon any known tribal cultural resources. This Mitigation Monitoring and Reporting Program is intended to avoid or reduce the potential for impacts by the Project upon previously-undiscovered tribal cultural resources

that may be present in subsurface soil deposits by specifying methods and procedures for avoiding or reducing such impacts.

The following mitigation measures (**TCR-1 through TCR-3**) will be implemented in order to ensure that construction of Project facilities does not result in significant adverse impacts upon any previously-undiscovered tribal cultural resources that may be uncovered during Project construction. Each measure is attended by a notation of the party responsible for its implementation and of the period for which it will be in effect.

TCR-1: Native American Monitoring

Prior to commencement of ground-disturbing activities on the Project site, the District will secure agreement with the Pechanga Band of Indians (Pechanga) for tribal monitoring of the site during ground-disturbing construction activities. The District will provide a minimum of 30 days advance notice to Pechanga of all mass grading and trenching activities. Pechanga representatives shall have the authority to temporarily halt and redirect ground-disturbing activities onsite in the event that suspected archaeological resources are unearthed.

Responsible Party: District Project Manager

Implementation Period: Prior to and During Ground Disturbing Activities

TCR-2: Final Disposition of Resources

In the event that Native American cultural resources are discovered during construction activities, the following procedures will be carried out for final disposition of the discoveries. One or more of the following treatments, in order of preference, shall be employed with Pechanga, and evidence of the treatments shall be provided to the District.

1. Preservation In Place. If feasible, preservation in place will be employed, leaving resources in the place where they were found, with no development affecting the integrity of the resources.
2. Reburial on the Project Property. The measures for reburial shall include, at minimum, measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation has been completed, with an exception that sacred items, burial goods, and Native American human remains are excluded. Any reburial process shall be culturally appropriate, and a listing of contents and location of the reburial shall be included in the confidential Phase IV

Report. The Phase IV Report shall be filed with the District under a confidential cover and is not subject to public records requests.

3. Curation. If preservation in place or reburial is not feasible, then the resources shall be curated in a culturally appropriate manner at a Riverside County curation facility that meets the criteria set forth in the State of California's *Guidelines for the Curation of Archeological Collections*, ensuring access and use. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees necessary for permanent curation. Evidence of curation in the form of a letter from the curation facility, stating that subject archaeological materials have been received and that all fees have been paid, shall be provided by the Project Archaeologist to the District. There shall be no destructive or invasive testing on sacred items, burial goods, and Native American human remains. Results concerning any inadvertent finds shall be included in the Phase IV Report. Evidence of compliance with this mitigation measure, if a significant archaeological resource is found, shall be provided to the District upon completion of a treatment plan and final report detailing the significance and treatment finding.

Responsible Party: Project Archaeologist and District Project Manager

Implementation Period: During, and Possibly After, Ground Disturbing Activities

TCR-3: Non-Disclosure

It is understood by all parties that, unless otherwise required by law, the site of any reburial of Native American human remains, associated grave goods, or other artifacts shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. In accordance with California Government Code §7927.000, the County Coroner, District, Project Archaeologist, and any other parties shall withhold public disclosure of information related to the reburial of any Native American human remains, grave goods, or other artifacts.

Responsible Party: Project Archaeologist, District Project Manager, and any other parties

Implementation Period: During and After Project Construction
