

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: CP20051 New Reservoir 5B-2

Lead Agency: Cucamonga Valley Water District

Contact Name: Jiwon Seung

Email: JiwonS@cvwdwater.com

Phone Number: (909) 987-2591

Project Location: Rancho Cucamonga
City

San Bernardino County
County

Project Description (Proposed actions, location, and/or consequences).

The CVWD proposes to construct New Reservoir 5B-2 adjacent to its existing Reservoir 5B, which is a 1 MG welded steel tank constructed in 1975 in the northern area of Rancho Cucamonga. New Reservoir 5B-2 will be a 3 MG welded steel tank approximately 136 feet in diameter and 32 feet high. Improvements also include associated underground piping. The goal of the Proposed Project is to provide an additional 3 million gallons of storage capacity in the District's water system to meet projected demands. The Project Site has been owned by the District and planned for future system improvements as warranted by population growth. This analysis assumes that the Proposed Project would be constructed during 2025 over a period of approximately 15 months. Less than 10 workers would be required during construction. Construction is planned to generally occur within daylight hours and the time period allowed by City of Rancho Cucamonga Ordinance.

The Proposed Project is located within a low-density residential area below the foothills, in the northern area of the City of Rancho Cucamonga. The site is east of Haven Avenue and north of Carrari Street.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The Project Site contains vegetation that is suitable for nesting birds and therefore, mitigation requiring a nesting bird survey shall be performed by a qualified biologist no more than 3 days prior to vegetation removal or ground-disturbing activities. Mitigation measures were requested by Native American Tribes during AB 52 consultation that reduce potential impacts related to the unanticipated find of cultural or tribal resources, or cultural remains. Excavation for the Project may extend into older Quaternary deposits and therefore significant fossils and/or previously undiscovered paleontological resources could be discovered; mitigation requiring on-site inspection of any unearthed fossils be performed immediately by a qualified paleontologist would reduce potential impacts to less than significant levels. Best Management Practices are required as a mitigation measure to ensure that construction noise does not exceed 65 dBA Leq at surrounding existing residential property lines. These mitigation measures are included in the Initial Study as BIO-1, CR-1, CR-2, GEO-1, HAZ-1, NOI-1, TCR-1, and TCR-2.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

None at this time.

Provide a list of the responsible or trustee agencies for the project.

State Water Resources Control Board, Division of Drinking Water
Regional Water Quality Control Board, Santa Ana Region
