Subject: Quail Canyon Improvement District Replacement Well and Pipeline Project,
Mitigated Negative Declaration, SCH No. 2025010183, Solano County

Dear Mr. Fuchslin:

The California Department of Fish and Wildlife (CDFW) received a Notice of Intent to Adopt a Mitigated Negative Declaration (MND) from the Solano Irrigation District (District) for the Quail Canyon Improvement District Replacement Well and Pipeline Project (Project) pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.¹

CDFW is submitting comments on the MND to inform the District, as the Lead Agency, of potentially significant impacts to biological resources associated with the Project.

CDFW ROLE

CDFW is a **Trustee Agency** with responsibility under CEQA pursuant to CEQA Guidelines section 15386 for commenting on projects that could impact fish, plant, and wildlife resources. CDFW is also considered a **Responsible Agency** if a project would require discretionary approval, such as permits issued under the California Endangered Species Act (CESA) or Native Plant Protection Act (NPPA), the Lake and Streambed Alteration (LSA) Agreement, or other provisions of the Fish and Game Code that afford protection to the state's fish and wildlife trust resources.

PROJECT DESCRIPTION SUMMARY

Proponent: Solano Irrigation District

Objective: The Project consists of constructing a new groundwater well and conveyance pipeline for an existing public water system. The new well will be 300 feet deep, and the conveyance pipeline will be a 10-inch diameter and 2,600 linear foot long pipe that will deliver water from the new well to the existing system. Staging and access

¹ CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Paul Fuchslin
Ross Valley Sanitary District
February 10, 2025
Page 2

for construction would occur in the Lake Solano County Park parking lot directly north of the proposed pipeline.

Location: City of Winters, County of Solano, with an approximate GPS centroid of Latitude 38.491478°, Longitude -122.028005°.

REGULATORY REQUIREMENTS

California Endangered Species Act and Native Plant Protection Act

Please be advised that a CESA Incidental Take Permit (ITP) must be obtained if the Project has the potential to result in “take” of plants or animals listed or candidate species under CESA or NPPA either during construction or over the life of the Project. **The Project has the potential to impact Swainson’s hawk (*Buteo swainsoni*), a CESA listed as threatened species, and burrowing owl (*Athene cunicularia*), a CESA candidate species, as further described below.** Issuance of an ITP is subject to CEQA documentation; the CEQA document must specify impacts, mitigation measures, and a mitigation monitoring and reporting program. If the Project will impact CESA listed species, early consultation is encouraged, as significant modification to the Project and mitigation measures may be required in order to obtain an ITP.

CEQA requires a Mandatory Finding of Significance if a project is likely to substantially restrict the range or reduce the population of a threatened or endangered species. (Pub. Resources Code, §§ 21001, subd. (c) & 21083; CEQA Guidelines, §§ 15380, 15064, & 15065.). Impacts must be avoided or mitigated to less-than-significant levels unless the CEQA Lead Agency makes and supports Findings of Overriding Consideration (FOC). The CEQA Lead Agency’s FOC does not eliminate the Project proponent’s obligation to comply with CESA.

Lake and Streambed Alteration

An LSA Notification, pursuant to Fish and Game Code section 1600 et seq., is required for project activities affecting lakes or streams and associated riparian habitat. Notification is required for any activity that may substantially divert or obstruct the natural flow; change or use material from the bed, channel, or bank including associated riparian or wetland resources; or deposit or dispose of material where it may pass into a river, lake, or stream. Work within ephemeral streams, washes, watercourses with a subsurface flow, and floodplains are subject to LSA Notification requirements. **As described in the *Biological Resources Technical Report* page 1 (MND PDF page 86), there are no CDFW jurisdictional waters within the Project area. However, it appears impacts to streams or riparian habitat may occur and an LSA Notification may be warranted, as further described below.** CDFW, as a Responsible Agency under CEQA, would consider the CEQA document for the Project and may issue an

Paul Fuchslin
Ross Valley Sanitary District
February 10, 2025
Page 3

LSA Agreement. CDFW may not execute the final LSA Agreement until it has complied with CEQA as a Responsible Agency.

Raptors and Other Nesting Birds

CDFW has jurisdiction over actions that may result in the disturbance or destruction of active nest sites or the unauthorized take of birds. Fish and Game Code sections protecting birds, their eggs, and nests include sections 3503 (regarding unlawful take, possession or needless destruction of the nests or eggs of any bird), 3503.5 (regarding the take, possession or destruction of any birds-of-prey or their nests or eggs), and 3513 (regarding unlawful take of any migratory nongame bird). Migratory birds are also protected under the federal Migratory Bird Treaty Act (MBTA).

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below to assist the District in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources. Based on the Project's avoidance of significant impacts on biological resources with implementation of mitigation measures, including those CDFW recommends below and in Attachment 1 Draft Mitigation and Monitoring Reporting Plan, CDFW concludes that an MND is appropriate for the Project.

I. Mitigation Measure and Environmental Setting Related Impact Shortcomings

MANDATORY FINDINGS OF SIGNIFICANCE. Does the Project have potential to substantially reduce the number or restrict the range of an endangered, rare, or threatened species?

AND

Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or U.S. Fish and Wildlife Service (USFWS)?

COMMENT 1: Swainson's Hawk, Mitigated Negative Declaration pages 15 and 23

Issue: The MND does not adequately evaluate and mitigate potential impacts to nesting Swainson's hawk and it appears there is suitable riparian nesting and foraging habitat within 0.5 miles of the Project, the distance at which nesting Swainson's hawk may be impacted by the Project. The MND states: "...the Project is located adjacent to the riparian corridor of Putah Creek, which is known to support nesting individuals of this species [i.e., Swainson's hawk]. In addition, there is a

Paul Fuchslin
Ross Valley Sanitary District
February 10, 2025
Page 4

recent (2016) CNDDDB occurrence of this species located approximately 4 miles northeast of the Project.” MND Mitigation Measure BIO-1 for nesting birds may not detect nesting Swainson’s hawk that may be impacted by the Project.

Recommended Mitigation Measures: To reduce potential impacts to Swainson’s hawk to less-than-significant and comply with CESA and Fish and Game Code section 3503.5, CDFW recommends including the below mitigation measure.

Mitigation Measure BIO-2 (Swainson’s Hawk Pre-Construction Survey): If Project activities are scheduled during the nesting season for Swainson’s hawk (March 1 to September 15), prior to beginning work on the Project, a qualified biologist shall conduct surveys according to the *Recommended Timing and Methodology for Swainson’s Hawk Nesting Surveys in California’s Central Valley* (<https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=83990&inline>) and prepare a report documenting the survey results. The Project shall obtain CDFW’s written approval of the qualified biologist and survey report prior to starting construction activities between March 1 and September 15. Survey methods shall be closely followed by starting early in the nesting season (late March to early April) to maximize the likelihood of detecting an active nest (nests, adults, and chicks are more difficult to detect later in the growing season because trees become less transparent as vegetation increases). Surveys shall be conducted: 1) within a minimum 0.5-mile radius of the Project site or a larger area if needed to identify potentially impacted active nests, unless otherwise approved by CDFW in writing, and 2) for at least the two survey periods immediately prior to initiating Project-related construction activities. Surveys shall occur annually for the duration of the Project. The qualified biologist shall have a minimum of two years of experience implementing the survey methodology resulting in detections. If active Swainson’s hawk nests are detected, the Project shall immediately notify CDFW and implement a 0.5-mile construction avoidance buffer around the nest until the nest is no longer active as determined by a qualified biologist, unless otherwise approved by CDFW in writing. Any detected nesting Swainson’s hawk shall be monitored by the qualified biologist to ensure it is not disturbed during construction activities, unless otherwise approved in writing by CDFW. If take of Swainson’s hawk cannot be avoided, the Project shall consult with CDFW pursuant to CESA and obtain an ITP before Project activities may commence.

COMMENT 2: Burrowing owl

Issue: The MND does not evaluate or mitigate for potential impacts to burrowing owl, and the Project site is within the yearlong range of the species and there are California Natural Diversity Database (CNDDDB) records of the species within approximately 3.5 miles of the Project area. It appears that suitable grassland

Paul Fuchslin
Ross Valley Sanitary District
February 10, 2025
Page 5

habitat for burrowing owl is present within 500 meters (1,640 feet) of the Project area, the distance at which the species may be disturbed.

Specific impacts and why they may occur and be significant: The Project could result in injury or mortality of resident, wintering, and nesting burrowing owl in burrows or other suitable refugia on or within up to 500 meters (1,640 feet) of the Project site. Burrowing owl have been extirpated from 16 percent of their former range and are at risk of being extirpated from another 13 percent of their range in the State (CDFW 2024). Information indicates a decline in burrowing owl range over time, burrowing owl has experienced population declines in regions of California and threats to burrowing owl, coupled with long-term population declines, suggest a high degree and immediacy of threat to burrowing owl in California (CDFW 2024). Burrowing owl population viability and survival are adversely affected by risk factors such as precipitous declines from habitat loss, fragmentation, and degradation; evictions from nesting sites without habitat mitigation; wind turbine mortality; human disturbance; and eradication of California ground squirrels resulting in a loss of suitable burrows required by burrowing owl for nesting, protection from predators, and shelter (Shuford and Gardali 2008; Department of Fish and Game Staff Report on Burrowing Owl Mitigation (2012); personal communication, CDFW Statewide Burrowing Owl Coordinator Esther Burkett, May 13, 2022). Preliminary analyses of regional patterns for breeding populations of burrowing owl have detected declines both locally in their central and southern coastal breeding areas, and statewide where the species has experienced breeding range retraction (Department of Fish and Game Staff Report on Burrowing Owl Mitigation (2012)). Burrowing owl is a candidate species under CESA and is federally protected by the federal MBTA. Based on the foregoing, if burrowing owl are wintering or nesting on or within up to 500 meters (1,640 feet) of the Project site, the Project may result in a substantial reduction in the number of a CESA candidate species, which is considered a Mandatory Finding of Significance pursuant to CEQA Guidelines section 15065, subdivision (a)(1).

Recommended Mitigation Measures: To reduce potential impacts to burrowing owl to less-than-significant and comply with CESA and Fish and Game Code section 3503.5, CDFW recommends including the below mitigation measures.

Mitigation Measure BIO-3 (Burrowing Owl Habitat Assessment and Surveys): A qualified biologist shall conduct a habitat assessment and surveys, if warranted based on the habitat assessment, following the *Department of Fish and Game Staff Report on Burrowing Owl Mitigation (2012)* methodology (<https://wildlife.ca.gov/Conservation/Survey-Protocols#377281284-birds>) and prepare a report documenting the survey results. The qualified biologist shall have a minimum of two years of experience implementing the above methodology. Based on the habitat assessment, if suitable burrows or burrow surrogates are present,

Paul Fuchslin
Ross Valley Sanitary District
February 10, 2025
Page 6

surveys for nesting burrowing owl shall be conducted if Project construction starts during nesting season (February 1 to August 31), and surveys for wintering burrowing owl shall be conducted if the construction starts during the wintering season (September 1 to January 31). The habitat assessment and surveys shall encompass the Project site and a sufficient buffer zone to detect owls nearby that may be impacted, which is up to 500 meters (1,640 feet) around the Project site pursuant to the above methodology, unless otherwise approved in writing by CDFW. Habitat assessments and surveys shall occur each year of Project construction, as conditions may change annually and suitable refugia for burrowing owl, such as small mammal burrows, can be created within a few hours or days, unless otherwise approved in writing by CDFW. Time lapses between surveys or Project activities shall trigger subsequent surveys, as determined by a qualified biologist, including, but not limited to, a final survey within 24 hours prior to ground disturbance.

If the habitat assessment does not identify burrows and additional surveys are not conducted, an additional habitat assessment shall be conducted within 14 days prior to construction. If new burrows are present, surveys shall be conducted as described above, unless otherwise approved in writing by CDFW.

The Project shall immediately notify CDFW if burrowing owl is detected and implement a construction avoidance buffer around any detected burrowing owl pursuant to the buffer distances outlined in the *Department of Fish and Game Staff Report on Burrowing Owl Mitigation* (2012), which may be up to 500 meters (1,640 feet). Any detected owl shall be monitored by the qualified biologist to ensure it is not disturbed during construction activities, unless otherwise approved in writing by CDFW. If the Project cannot ensure burrowing owl and their burrows are fully avoided, the Project shall consult with CDFW and obtain a CESA take authorization or otherwise demonstrate compliance with CESA. Take is likely to occur, and the Project shall obtain an ITP if: 1) burrowing owl surveys of the Project area detect burrowing owl occupancy of burrows or burrow surrogates, or 2) there is sign of burrowing owl occupancy on the Project area within the past three years and habitat has not had any substantial change that would make it no longer suitable. Occupancy means a site that is assumed occupied if at least one burrowing owl has been observed occupying a burrow or burrow surrogate within the last three years. Occupancy of suitable burrowing owl habitat may also be indicated by burrowing owl signs including its molted feathers, cast pellets, prey remains, eggshell fragments, or excrement at or near a burrow entrance or perch site. If burrowing owl, or their burrows or burrow surrogates, are detected within 500 meters (1,640 feet) of the Project site during burrowing owl surveys, but not on the Project site, the Project shall consult with CDFW to determine if avoidance is feasible or an ITP is warranted.

Mitigation Measure BIO-4 (Cap Pipes and Hoses): To prevent burrowing owl from sheltering or nesting in exposed material; all construction pipes, culverts, hoses or

Paul Fuchslin
Ross Valley Sanitary District
February 10, 2025
Page 7

similar materials greater than two inches in diameter stored at the Project site shall be capped or covered before the end of each work day and shall be inspected thoroughly for wildlife before the pipe or similar structure is buried, capped, used, or moved.

Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by CDFW or the USFWS?

COMMENT 3: Stream Impacts and Lake and Streambed Alteration Notification, Page 29

Issue: It is unclear how the Project will avoid impacts to streams and riparian habitat because:

- 1) Figure 4 (MND PDF page 29) depicts 0.22 acres of riparian habitat within the Project area;
- 2) According to California Aquatic Resources Inventory (CARI) Streams layer and the National Hydrography Dataset, there is an unnamed stream parallel to Pleasant's Valley Road intersecting the pipeline alignment, that appears to flow into Putah Creek; and
- 3) The new well is located adjacent to Putah Creek (approximately 600 feet south from the center of the creek) and Pleasant Creek (approximately 250 feet west from the center of the creek). Due to the proximity of the two creeks, the pumping from the well may draw from one or both creeks, which may impact the creek(s).

Specific impacts and why they may occur and be significant: Streams and riparian zones are of critical importance to protecting and conserving the biotic and abiotic integrity of an entire watershed. Development facilitated by the Project may result in impacts to streams and riparian habitats. When riparian habitat is substantially altered, riparian functions become impaired, thereby potentially substantially adversely impacting aquatic and terrestrial species. Therefore, Project impacts to streams would be potentially significant.

Recommended Mitigation Measure: To comply with Fish and Game Code section 1600 et seq., CDFW recommends including the below mitigation measure.

Mitigation Measure BIO-5 (LSA Notification and other Permits): The Project shall conduct a thorough evaluation of potential impacts to streams and riparian habitat based on the above information. If the Project activities would impact any streams or associated riparian habitat, the Project shall notify CDFW pursuant to Fish and Game Code section 1600 et seq. and shall comply with the LSA Agreement, if

Paul Fuchslin
Ross Valley Sanitary District
February 10, 2025
Page 8

issued (for more information see: <https://wildlife.ca.gov/Conservation/Environmental-Review/LSA> and <https://epims.wildlife.ca.gov/index.do>). The Project shall also comply with the Clean Water Act and Porter-Cologne Water Quality Control Act and obtain associated permits if necessary.

Please be advised that an LSA Agreement, if issued for the Project, would likely include the above recommended mitigation measures, as applicable, and may include additional measures to protect fish and wildlife resources.

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special-status species and natural communities detected during Project surveys to CNDDDB. The CNDDDB field survey form can be filled out and submitted online at the following link:

<https://wildlife.ca.gov/Data/CNDDDB/Submitting-Data>. The types of information reported to CNDDDB can be found at the following link:

<https://www.wildlife.ca.gov/Data/CNDDDB/Plants-and-Animals>.

ENVIRONMENTAL DOCUMENT FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of environmental document filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the environmental document filing fee is required in order for the underlying Project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

CONCLUSION

CDFW appreciates the opportunity to comment on the MND to assist the District in identifying and mitigating Project impacts on biological resources.

Questions regarding this letter or further coordination should be directed to Jordan Beaton, Environmental Scientist, at Jordan.Beaton@wildlife.ca.gov; or (707) 980-5172; or Melanie Day, Senior Environmental Scientist (Supervisory), at Melanie.Day@wildlife.ca.gov or (707) 210-4415.

Draft Mitigation and Monitoring Reporting Plan

Biological Resources (BIO)			
Mitigation Measure (MM)	Description	Timing	Responsible Party
BIO-2	<p><i>Swainson's Hawk Pre-Construction Survey:</i> If Project activities are scheduled during the nesting season for Swainson's hawk (March 1 to September 15), prior to beginning work on the Project, a qualified biologist shall conduct surveys according to the <i>Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley</i> (https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=83990&inline) and prepare a report documenting the survey results. The Project shall obtain CDFW's written approval of the qualified biologist and survey report prior to starting construction activities between March 1 and September 15. Survey methods shall be closely followed by starting early in the nesting season (late March to early April) to maximize the likelihood of detecting an active nest (nests, adults, and chicks are more difficult to detect later in the growing season because trees become less transparent as vegetation increases). Surveys shall be conducted: 1) within a minimum 0.5-mile radius of the Project site or a larger area if needed to identify potentially impacted active nests, unless otherwise approved by CDFW in writing, and 2) for at least the two survey periods immediately prior to initiating Project-related construction activities. Surveys shall occur annually for the duration of the Project. The qualified biologist shall have a minimum of two years of experience implementing the survey methodology resulting in detections. If active Swainson's hawk nests are detected, the Project shall immediately notify CDFW and implement a 0.5-mile construction avoidance buffer around the nest until the nest is no longer active as determined by a qualified biologist, unless otherwise approved by CDFW in writing. Any detected nesting Swainson's hawk shall be monitored by the qualified biologist to ensure it is not disturbed during construction activities, unless otherwise approved in writing by CDFW. If take of Swainson's hawk cannot be avoided, the Project shall</p>	<p>Prior to Ground Disturbance and for Duration of Construction</p>	<p>Project Applicant</p>
