AKASH WINERY VEHICLE MILES TRAVELED (VMT) SCREENING EVALUATION

Urban Crossroads, Inc. has prepared the following Vehicle Miles Traveled (VMT) Screening Evaluation for the Akash Winery (**Project**), which is located at 39730 Calle Contento in the County of Riverside (**County**) (Assessor's Parcel Number [**APN**] 943-210-012).

PROJECT OVERVIEW

It is our understanding that the 19.34-acre Project has approximately 14.5 acres devoted to vineyards. The existing structures on-site consist of the following: a 4,932-square-foot (sf) Tasting and Production Building (1,737 sf Tasting, 159 sf Retail, 211 sf VIP Lounge, 1,025 sf Wine Production, 1,414 sf Storage, 158 sf Lab/Office, and 228 sf Glass Wash Station), and a 430-square-foot restroom facility.

The Project proposes to expand the existing 4,932 sf Tasting and Production building by an additional 6,075 square feet. The expanded building area will consist of an increased wine production area, wine storage, wine lab, barrel washroom, staff restrooms, staff breakroom, offices, conference room, and a covered tractor parking area. The existing wine tasting/production building area will also be modified to add a delicatessen and wine tasting bar. Outdoor patio covers will also be replaced along with the addition of an outdoor wine tasting bar and refrigeration unit.

BACKGROUND

The California Environmental Quality Act (CEQA) requires all lead agencies to adopt VMT as the measure for identifying transportation impacts for land use projects. To comply with CEQA, the County of Riverside adopted Transportation Analysis Guidelines for Level of Service Vehicle Miles Traveled (December 2020) (**County Guidelines**) (1). This VMT screening evaluation has been developed based on the adopted County Guidelines.

VMT SCREENING

Consistent with County Guidelines, land use projects should evaluate applicable VMT screening criteria based on their location, size, and land use type to determine if a presumption of a less than significant transportation impact can be made without the need of a full project-level VMT analysis. The County Guidelines list seven screening criteria (see below), of which four (shown in **bold**) were selected for further review based on their applicability to the Project. The County Guidelines screening criteria are as follows:

- **Small Projects**
- **Projects Near High Quality Transit (HQT)**
- **Local-Serving Retail**
- Affordable Housing
- Local Essential Service
- **Map-Based Screening**
- Redevelopment Projects

A land use project only needs to meet one of the above screening criteria to result in a less than significant impact.

SMALL PROJECTS SCREENING

County Guidelines describes small projects as those with low trip generation per existing CEQA exemptions or those forecasted to generate greenhouse gas (GHG) emissions below 3,000 Metric Tons of Carbon Dioxide Equivalent (MTCO_{2e}) per year.¹ A project generating less than 110 vehicle trips per day is considered low trip generating. The proposed Project is expected to generate more than 110 vehicle trips per day (See Attachment A); however, the Project is expected to produce 1,455.71 MTCO_{2e} per year, which is below the 3,000 MTCO_{2e} annual threshold (See Attachment C).

Small Projects screening criteria is met.

PROJECTS NEAR HIGH QUALITY TRANSIT (HQTA) SCREENING

The County Guidelines refers to the State's Office of Planning and Research's (OPR) Technical Advisory on Evaluating Transportation Impacts in CEQA (December 2018) (**Technical Advisory**) when considering projects located near HQTA. The Technical Advisory (pages 13 & 14) states that the Projects located within a HQT (i.e., within ½ mile of an existing "major transit stop"² or an existing stop along a "high-quality transit corridor"³) may be presumed to have a less than

¹ County Guidelines; Page 19.

² Pub. Resources Code, § 21064.3 ("Major transit stop" means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").

³ Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

The Project does not meet the secondary criteria of having a FAR of greater than 0.75. As such, the Project would not qualify for HQT screening irrespective of the Project's proximity to transit.

HQT screening criteria is not met.

LOCAL-SERVING RETAIL SCREENING

The County Guidelines identify that local serving retail uses under 50,000 square feet are presumed to have a less than significant impact absent substantial evidence to the contrary. The Project does not intend to develop any local serving retail uses.

Local-Serving Retail screening criteria is not met.

MAP-BASED SCREENING

The County Guidelines note that "this method eliminates the need for complex analyses, by allowing existing VMT data to serve as a basis for the screening smaller developments. Note that screening is limited to residential and office projects."⁴ As the Project is neither residential nor office, the Project does not qualify for this screening criteria.

Map-Based screening criteria is not met.

CONCLUSION

Based on our review of applicable VMT screening criteria, the Project meets the Small Projects screening criteria. Therefore, the Project is presumed to have a less than significant impact on VMT; no additional VMT analysis is required.

If you have any questions, please contact me directly at aso@urbanxroads.com.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	9,113	3,038	—

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	—	—
Site Preparation	—	—	1.00	0.00	—
Grading	—	—	1.63	0.00	—
Paving	0.00	0.00	0.00	0.00	0.00

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Refrigerated Warehouse-No Rail	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

KWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	349	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Refrigerated Warehouse-No Rail	279	1,236	1,246	202,221	5,238	23,189	23,375	3,793,575

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
0	0.00	9,113	3,038	4,469

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	250

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Refrigerated Warehouse-No Rail	132,858	349	0.0330	0.0040	160,751

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

Land Use	Indoor Water (gal/year)	Outdoor Water (gal/year)
Refrigerated Warehouse-No Rail	8,438,630	0.00

5.13. Operational Waste Generation

5.13.1. Unmitigated

Land Use	Waste (ton/year)	Cogeneration (kWh/year)
Refrigerated Warehouse-No Rail	5.71	—

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

Land Use Type	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Refrigerated Warehouse-No Rail	Cold storage	User Defined	150	7.50	7.50	7.50	25.0

5.15. Operational Off-Road Equipment

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	33.0	annual days of extreme heat
Extreme Precipitation	4.10	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	23.8	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi. Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters. Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	5	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	5	1	1	4
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract			
Exposure Indicators	—			
AQ-Ozone	76.9			
AQ-PM	31.6			
AQ-DPM	25.1			
Drinking Water	19.3			
Lead Risk Housing	4.97			
Pesticides	58.9			
Toxic Releases	8.74			
Traffic	14.1			
Effect Indicators	—			
CleanUp Sites	40.8			
Groundwater	30.9			
Haz Waste Facilities/Generators	59.1			
Impaired Water Bodies	66.7			

Solid Waste	75.7
Sensitive Population	—
Asthma	17.8
Cardio-vascular	64.2
Low Birth Weights	67.9
Socioeconomic Factor Indicators	—
Education	46.2
Housing	2.99
Linguistic	9.46
Poverty	11.3
Unemployment	65.6

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	90.00384961
Employed	14.1537277
Median HI	89.1056076
Education	—
Bachelor's or higher	59.373797
High school enrollment	25.49724111
Preschool enrollment	10.97138458
Transportation	—
Auto Access	80.12318748
Active commuting	2.707558065
Social	—

2-parent households	78.17271911
Voting	57.98793789
Neighborhood	—
Alcohol availability	92.19812652
Park access	4.965995124
Retail density	9.778005903
Supermarket access	7.4554087
Tree canopy	6.351854228
Housing	—
Homeownership	80.30283588
Housing habitability	95.02117285
Low-inc homeowner severe housing cost burden	92.58308739
Low-inc renter severe housing cost burden	86.06441678
Uncrowded housing	75.52932119
Health Outcomes	—
Insured adults	82.56127294
Arthritis	44.8
Asthma ER Admissions	91.5
High Blood Pressure	53.6
Cancer (excluding skin)	36.4
Asthma	46.1
Coronary Heart Disease	77.0
Chronic Obstructive Pulmonary Disease	59.8
Diagnosed Diabetes	82.1
Life Expectancy at Birth	84.3
Cognitively Disabled	99.0
Physically Disabled	89.8

Heart Attack ER Admissions	62.1
Mental Health Not Good	56.0
Chronic Kidney Disease	79.8
Obesity	46.0
Pedestrian Injuries	19.6
Physical Health Not Good	65.0
Stroke	80.6
Health Risk Behaviors	—
Binge Drinking	16.3
Current Smoker	49.4
No Leisure Time for Physical Activity	67.1
Climate Change Exposures	—

Elderly	90.0
English Speaking	73.0
Foreign-born	22.5
Outdoor Workers	91.7
Climate Change Adaptive Capacity	—
Impervious Surface Cover	79.1
Traffic Density	14.5
Traffic Access	23.0
Other Indices	—
Hardship	38.7
Other Decision Support	—
2016 Voting	59.3

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	34.0
Healthy Places Index Score for Project Location (b)	61.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Healthy Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Operations: Vehicle Data	Trip characteristics based on information provided in the Trip Generation.
Operations: Architectural Coatings	SCAQMD Rule 1113
Operations: Refrigerants	As of 1 January 2022, new commercial refrigeration equipment may not use refrigerants with a GWP of 150 or greater. Further, R-404A (the CalEEMod default) is unacceptable for new supermarket and cold storage systems as of 1 January 2019 and 2023, respectively.
Operations: Water and Waste Water	5,053,630 water and 3,385,000 wastewater per year per Riverside County Wine Country Plan
Construction: Off-Road Equipment	Construction equipment parameters taken from 08449 - Gibson Winery.
Construction: Architectural Coatings	SCAQMD Rule 1113
