Open space

Project Description: (please use a separate page if necessary)

The main purpose of this Project is to implement an ecologically uplifting approach to flood management that will reduce erosion, restore aquatic and riparian habitat, and promote public recreation. This project will also serve as a pilot project for wider use throughout Zone 7's system. The Project includes combinations of habitat uplift and bank stabilization features, collectively referred to as 'modules.' Module designs will direct flows to the center of the channel and away from the banks and revegetate the banks with native plant species. The Project will reduce bank erosion caused by high turbulence and flows down Alamo Creek, thereby enhancing flood protection by maintaining the flood control channel. Reduced toe scour and bank erosion will also reduce fine sediment inputs to the creek and improve downstream water quality.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

Reviewing Agencies Checklist

Lead Agencies may recommend State Clearinghouse distribution by marking agencies below with an "X".
If you have already sent your document to the agency please denote that with an "S".
