

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Los Angeles County Department of Beach & Harbors Sand Compatibility and Opportunistic Use Program

Lead Agency: Los Angeles County

Contact Name: Emiko Innes

Email: EInnes@bh.lacounty.gov Phone Number: 424-526-7751

Project Location: Several Cities Los Angeles
City *County*

Project Description (Proposed actions, location, and/or consequences).

The proposed project would include beach nourishment of five receiver sites where high-quality sediment material would be placed at the existing beaches to protect against erosion. The Los Angeles County Department of Beach and Harbors (LACDBH) Sand Compatibility Opportunistic Use Program (SCOUP) includes five receiver sites: Zuma Beach, Will Rogers State Beach, Dockweiler State Beach, Manhattan Beach, and Redondo Beach that were selected by LACDBH based on a variety of criteria that include present and future coastal erosion and flooding vulnerabilities, presence of existing resources, presence of critical public infrastructure and amenities, recreational and economic benefits, and avoidance of adverse effects on coastal resources. Trucks would be used to transport sediment material to each beach site, where it would be stockpiled, and then placed along the beach site using heavy equipment.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The proposed project would result in potentially significant impacts to Air Quality, Biological Resources and Cultural/Tribal Cultural Resources. Mitigation measures reduce all impacts to a less-than-significant level.

Air quality mitigation measures require Tier 4 construction equipment and limiting sand hauling trip length depending upon the number of beach sites occurring simultaneously.

Biological resources mitigation measures include worker awareness programs, general best management practices, water quality monitoring, habitat avoidance, and species surveys.

Cultural and tribal cultural resources mitigation measures include avoidance and minimization measures in the event of an inadvertent discovery of cultural resources/tribal cultural resources.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Not Applicable.

Provide a list of the responsible or trustee agencies for the project.

California Coastal Commission, United States Army Corps of Engineers, Regional Water Quality Control Board.
