

# EXHIBIT B-2

Arborist Survey/Inventory  
Proposed Vineyard Blocks One and Two  
Trust Vineyard Partners, Yountville, CA  
November 15, 2018

## **Assignment:**

Provide an inventory of potentially impacted trees on the site located adjacent to 7353 St. Helena Highway (Highway 29), Yountville, CA, including species, diameter at breast height (dbh) measured at 4.5 feet above natural grade, and tree survey section area. Trees were not to be marked, tagged, or mapped beyond survey section.

## **Background:**

The clearing limits and staking map was provided by RSA and forwarded by Applied Civil Engineering; RSA provided field staking and flagging. Bruce Phillips provided field orientation on the site.

## **Observations:**

Species:

Trees on the site range from young to mature specimens of native species as well as a few mature specimens of orchard trees. Native species include coast live oak (*Quercus agrifolia*), Oregon white oak (*Quercus garryana*), blue oak (*Quercus douglasii*), black oak (*Quercus kelloggii*), scrub oak (*Quercus berberidifolia*), madrone (*Arbutus menziesii*), Douglas-fir (*Pseudotsuga menziesii*), California buckeye (*Aesculus californica*), California bay laurel (*Umbellularia californica*), and manzanita (*Arctostaphylos manzanita*); orchard species include fruiting almond (*Prunus dulcis*), and olive (*Olea europaea*).

The primary species occurring on the site are coast live oak and madrone, and it is characterized as coast live oak woodland per California Native Plant Society's *A Manual of California Vegetation*. Other plants on the site include non-native grassland species, poison oak (*Toxicodendron diversilobum*), snowberry (*Symphoricarpos* sp.), beaked hazelnut (*Corylus cornuta*), and non-native prickly pear cactus (*Opuntia* sp.) and Spanish lavender (*Lavandula stoechas*).

## **Survey:**

The site was surveyed over two days, November 1 and 2, 2018. Trees were measured with a diameter tape at 54 inches above grade (dbh), except for those trees growing amongst poison oak- those trees were visually estimated. Tree data are presented in the attached spreadsheets, listed as potential blocks one and two. The natural form of many trees is one of double or multiple trunks, which is noted on the spreadsheet; trunks are added together for the listed diameter. In addition to the trees shown on the spreadsheet, there are several woody manzanitas on the site, 9 in block one and 25 in block two.
