Description of Nature, Purpose and Beneficiaries of Project

The San Luis Obispo County Department of Public Works proposes to replace damaged portions of an existing stormwater conveyance system that directs stormwater from upland residential development past two existing wastewater treatment ponds within the Oak Shores community. The project includes abandoning a portion of the existing stormwater channel, backfilling it to the finished grade, and constructing a new 525-foot trapezoidal channel with varying slopes. The new channel will include an impact basin consisting of a concrete dissipator and a rock dissipator apron. The project involves excavating 5,350 cubic yards of material and placing 5,660 cubic yards of fill, resulting in a net fill of 320 cubic yards. Additionally, a 220-foot HDPE storm drain will be installed to connect to the existing system and discharge into the riprap apron. The approximate area of disturbance for the project is 2.62 acres, with approximately 0.07 acres within the ordinary high-water mark, which is subject to regulatory oversight.
