Re: Water Availability Letter for Sand Canyon Resort, MC#18-021, Assessor's Parcel Number 2840-022-025

Gentlemen:

The above-referenced **Sand Canyon Resort** ("Development") is within the service area of Santa Clarita Valley Water Agency ("Agency"). The Development consists of a 250-room hotel with an additional 70 villas as well as a spa, banquet facilities, restaurants and other amenities. The Agency is prepared to provide safe and reliable water service to the Development subject to the following terms, conditions and reservations:

1. Developer shall submit to Agency a set of construction improvement plans and fire department requirements for the Development. This will enable Agency to the determine distribution system and other water facilities required for the Development in accordance with Agency rules. The Development may require the installation of a reservoir, water mains, services or other appurtenances, or may require improvements to the existing source of supply, which improvements shall be the responsibility of Developer. Fire flow requirements shall be determined by the regulatory agency with applicable jurisdiction (e.g., Los Angeles County Fire Department). The size and scope of any facilities required to deliver adequate fire flow will be determined by the Agency.

2. Developer shall grant Agency all easements and, if necessary, sites for facilities required for water service to the Development, together with a policy of title insurance acceptable to the Agency, guaranteeing Agency's title to and interest in such easements. Developer will be responsible for all fees and charges associated with preparation and recordation of the easements.

3. Pursuant to the requirements of the Agency, Developer shall pay all required fees and charges, including any required deposit amounts, in order to develop planning documents, prepare or process plans and designs, and to complete construction of on-site and off-site improvements required for water service to the Development.

4. Developer shall comply with all of the Agency's rules and regulations governing water service and development in force at the time water service is requested, as those rules may be amended from time to time. Developer acknowledges that all water service

pursuant to this letter and to the Development shall be in accordance with Agency rules and regulations.

5. The provision of water service to the Development is conditioned upon the Developer meeting all requirements of any other governmental entity having jurisdiction over the Development.

6. Developer acknowledges and agrees that this letter is limited and exclusive to the Development and the number of units or lots described above and may not be transferred or assigned to any other person, firm or entity, or for any other purpose without the Agency's written consent.

7. Developer acknowledges and agrees that this letter in no way alters the settlement agreement between the prior owner, Robinson Ranch Golf, LLC and the former Castaic Lake Water Agency agreed upon on July 23, 2003.

8. Agency can provide safe and reliable water service to Development, and fully expects to be able to continue providing safe and reliable water service into the future. In relying upon this letter and Agency's ability to provide water service to the Development, Developer is aware of the restrictions and limitations contained in this letter and the reliance of Agency upon its wells and imported water supplied by the State Water Project to supply the water needed for domestic water purposes, both of which are subject to restriction.

9. At any time prior to connection to the existing water system, and upon a finding by the Board of Directors of the Agency that it is unable to serve the Development for reasons beyond Agency's control, this letter may be revoked by the Agency.

10. Water supply availability is further conditioned expressly upon the Development being located within the boundaries of the Agency, and to the extent necessary, effective completion of the annexation of the Development, or any portion thereof, which is not now within the boundaries of the Agency.

11. By issuing this letter, the Agency does not guarantee any specific quantities or quality of water, pressures or flows with respect to water service provided by the Agency.

12. Developer, for itself and on behalf of its successors, agrees to defend at Developer's expense, any action brought against Agency, its agents, officers or employees because of the issuance of this letter or any approvals or authorizations obtained in connection with the Development, or in the alternative, to relinquish any such approvals or authorizations. Developer shall reimburse Agency for any costs, fees or expenses Agency may incur as a result of any such legal action. Further, Developer agrees that in conducting the defense of such action, the Agency shall be entitled to engage its own attorneys, the entire expense of which shall be paid by Developer.

13. This letter and any representations or assurances made herein, shall expire and be null and void twenty-four (24) months from the date hereof if water service has not been installed to the Development. The Developer and the Development shall not be entitled to any individual water service connections not installed prior to expiration of this letter.

Very truly yours,

Santa Clarita Valley Water Agency

TABLE OF CONTENTS

1. INTRODUCTION

The purpose of this report is to provide the summary of onsite sewer flow for the proposed Sand Canyon Resort (VTTM 78248) development. Offsite flows are incorporated with this report to demonstrate routing of sewer system.

The proposed project is located at the northeast corner of Sand Canyon Road and Robinson Ranch Road in the Sand Canyon area in the City of Santa Clarita. The project consists of approximately 75 acres of proposed development and open space areas. Surrounding properties are zoned UR1, NU4, NU5, OS; rural development is present.

2. PROJECT LAND USE

The proposed Sand Canyon Resort in VTTM 78248 includes resort, low density residential, industrial commercial and open space land uses. Only areas that contribute towards sewage generation were included in the sewer area study analysis.

3. METHODOLOGY

The proposed project was divided into 7 subareas that drain into existing 8" VCP per PC 98-13 in the Robinson Ranch Road. And there were 3 subareas that also drain into existing 8" VCP.

Sewer discharge rates were computed as a product of the zoning coefficients and the land use data. Land use data was compiled based on an area calculation of each tributary area for resort, low density residential and industrial commercial areas. The sewer generation factors were based upon the City of Santa Clarity zoning coefficients for private contract sewer projects. Pipe capacity analysis was calculated using Kutter's formula.

A summary table describing the land use data with its corresponding sewage discharge can be found in the Appendix in Table 1 and Table 2.

4. CONCLUSIONS AND RECOMMENDATIONS

The proposed Sand Canyon Resort generates 0.074 cfs addition sewage demand to the existing system. The existing 8" VCP in Robinson Ranch Road and existing 15" VCP in Sand Canyon Road have sufficient capacity to carry the added sewer demand from Sand Canyon Resort VTTM 78248. Therefore no proposed upgrade is needed for these two existing sewer line. Table 3 below shows the minimum capacity by calculating in the flatter section and half full of the existing pipes.

Location	Pipe Size	Pipe Slope (ft/ft)	Flow at 50% depth of flow =100% capacity	Cumulative calculated Q_{TOTAL} (cfs)
Robinson Ranch Road	8	0.004	0.349	0.305
Sand Canyon Road	15	0.0064	4.652	0.848

Table 3: Capacity Vs Cumulative Q comparison table

The cumulative calculated Q_{TOTAL} for the reach with the Robinson Ranch Road is the sum of the existing Q from TR 52004 and proposed project site. The existing Q for the 15" VCP along Sand Canyon Road is calculated by delta Q from Manholes 142 and 141per the sewer area study for TM063022 (see attached map), and the existing Q is 0.774cfs.

Currently, the existing 18" VCP (P9768-R) in Lost Canyon Road between Manholes 142 to 138 is 4.257cfs. And the existing calculated Q at the segment is 6.357 cfs per Sewer Area study for TM063022. Therefore an upgraded is recommended for the proposed development per the calculation.

A flow test is performed to determine the actual flow rate in Manhole 138, and it is 2.61cfs. So the upgrade is not needed for the proposed project and upgraded will be required for future development. A fair share is calculated for the project site to pay for a portion of the upgrade. In the fair share calculation, potential development is included See Table 4.

Dear Mr. Nguyen:

Revised Response to the Revised NOP for Sand Canyon Resort Project

The Santa Clarita Valley Sanitation District (District) responded to a Revised Notice of Preparation of a Draft Environmental Impact Report (NOP) for the subject project on May 2, 2019 (copy enclosed). The proposed project is located within the jurisdictional boundaries of the District. We offer the following amendment:

- The District determined the wastewater originating from the proposed project site will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' Soledad Canyon Section 5 Trunk Sewer, located in Soledad Canyon Road at Los Canyon Road. The Districts' 18-inch diameter trunk sewer has a capacity of 5.7 million gallons per day (mgd) and conveyed a peak flow of 2.2 mgd when last measured in 2018.

The previous response letter misidentified wastewater flow tributary to the Soledad Canyon Section 4 Trunk Sewer. As a result of the amendment provided herein, the developer is no longer required to submit a build-out schedule. If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

Dear Mr. Nguyen:

Response to Revised NOP for the Sand Canyon Resort Project

The Santa Clarita Valley Sanitation District (District) received a Revised Notice of Preparation of a Draft Environmental Impact Report (NOP) for the subject project on April 4, 2019. The proposed project is located within the jurisdictional boundaries of the District. Previous comments submitted by the District in correspondence dated November 15, 2018 (copy enclosed) still apply the subject project with the following updated information:

1. The Districts' 15-inch diameter Soledad Canyon Section 4 Trunk Sewer, located in a private right of way in the Santa Clara River southeast of the south terminus of Hidaway Avenue, is at capacity. Please submit a copy of the project's build-out schedule to the undersigned to ensure the project is considered when planning future sewerage system relief and replacement projects.

2. The expected increase in average wastewater flow from the revised project scope, described in the notice as a total of 392 hotel rooms, including the view villas, 25,000 square feet of Dining area, and a 33,000 square-foot Spa/Gym/Salon, is 95,970 gallons per day.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

Dear Mr. Nguyen:

NOP Response for the Sand Canyon Resort Project

The Santa Clarita Valley Sanitation District (District) received a Notice of Preparation of a Draft Environmental Impact Report for the subject project on October 18, 2018. The proposed project is located within the jurisdictional boundaries of the District. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the District, for conveyance to the District's Soledad Canyon Trunk Sewer Section 4, located in a private right of way in the Santa Clara River southeast of the terminus of Hidaway Avenue. The District's 15-inch diameter trunk sewer has a capacity of 2.7 million gallons per day (mgd) and conveyed a peak flow of 1.5 mgd when last measured in 2012.

2. Availability of sewer capacity depends upon project size and timing of connection to the sewerage system. Because there are other proposed developments in the area, the availability of trunk sewer capacity should be verified as the project advances. Please submit a copy of the project's build-out schedule to the undersigned to ensure the project is considered when planning future sewerage system relief and replacement projects.

3. The District operates two water reclamation plants (WRPs), the Saugus WRP and the Valencia WRP, which provide wastewater treatment in the Santa Clarita Valley. These facilities are interconnected to form a regional treatment system known as the Santa Clarita Valley Joint Sewerage System (SCVJSS). The SCVJSS has a capacity of 28.1 mgd and currently produces an average recycled water flow of 18.4 mgd.

4. The expected average wastewater flow from the project, described in the notice as a total of 322 hotel rooms and 25 villas, is 44,150 gallons per day. For a copy of the District's average wastewater generation factors, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

5. The District is empowered by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the District's Sewerage System for increasing the strength or quantity of wastewater discharged from connected facilities. This connection fee is a capital facilities fee that is imposed in an amount sufficient to construct an incremental expansion of the Sewerage System to accommodate the proposed project. Payment of a connection fee will be required before a permit to connect to the sewer is issued. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and search for the appropriate link. In determining the impact to the Sewerage System and applicable connection fees, the Districts' Chief Engineer and General Manager will determine the user category (e.g. Condominium, Single Family home, etc.) that best represents the actual or anticipated use of the parcel or facilities on the parcel. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at (562) 908-4288, extension 2727.

6. In order for the District to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of District wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CCA. All expansions of District facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of District treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the District intends to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of District facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.
