Health Risk Assessment Scenario 2: Haul Route North

Haul trucks would travel along the top of the levee crossing the paved bicycle path adjacent to the 28th and B Street Skate Park. Bicycle traffic would be controlled by a dedicated flagger during construction to prevent collisions from occurring. Haul trucks would enter the main ingress point and deliver their loads along Site 1-1 and then continue along the top of the levee east to exit at Glenn Hall Park and continue on Carlson Drive to H Street. Haul trucks would travel south along Howe Avenue to U.S. 50. This emissions scenario included 100 percent of the haul truck trips traveling south on Howe Avenue to U.S. 50.

Acronyms and Abbreviations

ARCF	American River Common Features
CAA	Clean Air Act
CFR	Code of Federal Regulations
CO	Carbon monoxide
EPA	U.S. Environmental Protection Agency
GRR	General Reevaluation Report
NAAQS	National Ambient Air Quality Standards
NO_2	Nitrogen dioxide
NO_X	Nitrogen oxides
PM_{10}	Particulate matter with an aerodynamic diameter of 10 micrometers or less
$PM_{2.5}$	Particulate matter with an aerodynamic diameter of 2.5 micrometers or less
ppb	Parts per billion
ppm	Parts per million
RCEM	Road Construction Emissions Model
ROG	Reactive organic gases
SIP	State Implementation Plan
SMAQMD	Sacramento Metropolitan Air Quality Management District
SO_2	Sulfur dioxide
USACE	U.S. Army Corps of Engineers
VOC	Volatile organic compounds
YSAQMD	Yolo-Solano Air Quality Management District
$\mu g/m^3$	Micrograms per cubic meter

General Conformity Determination
American River Watershed Common Features 2016 Project

The General Conformity regulations at Title 40 Code of Federal Regulations (CFR) Subchapter C Part 93 ensure that the actions taken by federal agencies do not interfere with a state's plans to attain and maintain national standards for air quality. This General Conformity Determination documents how the American River Common Features (ARCF) 2016 Project will meet the requirements of the General Conformity regulations.

Project Purpose and Description

The purpose of the ARCF 2016 Project is to reduce the risk of flooding within the Greater Sacramento metropolitan area.

The Sacramento metropolitan area is one of the urban regions most at risk of flooding in the United States. Constructed in the mid-twentieth century, the Sacramento River Flood Control Project was designed to protect the city from floodwaters as high as the known flood of record, which at the time of construction was the flood of 1927. A new record flood occurred in 1986, followed by a slightly smaller flood in January 1997, each of which caused levee failures and localized flooding. The primary risks to levee performance are seepage, underseepage, stability, erosion, and overtopping.

High water flows in both the American and Sacramento Rivers place considerable stresses on the network of levees protecting the Sacramento area. Without prompt improvement of weakened or sub-standard levee reaches, the levee system will remain at heightened risk of failure during periods of high water in the two rivers. The consequences of a major levee failure could be catastrophic because the protected area is highly urbanized and flooding could reach 20 feet deep, causing severe property damage, possible loss of life and serious contamination of drinking water supplies for downstream users.

The ARCF 2016 Project will construct approximately $1.5 billion in improvements to the Sacramento metropolitan area flood protection system, as recommended by the *American River Watershed Common Features General Reevaluation Report (GRR)*. Recommendations in the GRR include construction of levee improvement measures to address seepage, instability, erosion, and overtopping risks identified for the Sacramento River, Arcade Creek, Natomas East Main Drainage Canal (NEMDC), and Magpie Creek, as well as erosion control measures for specific locations along the American River, and widening of the Sacramento Weir and Bypass to provide capacity for diversion of a higher volume of flood flows into the Yolo Bypass.

In 2018, under the Bipartisan Budget Act (Public Law 115-123), Congress appropriated full funding for the ARCF 2016 Project under the Long-Term Disaster Recovery Investment Program (LTDRIP). U.S. Army Corps of Engineers (USACE) implementation guidance for the LTDRIP (Civil Works Director's Policy Memorandum # DPM CW 2018-09) requires that the project be implemented on a much accelerated schedule to meet the obligations of the federal funding under this program. To meet the accelerated schedule, this project must be completed by January of 2024. If not completed on this timeline, exposure to significant flood risk will persist, including loss of life, loss of agricultural production, damage to homes and businesses, and damage to public facilities.

Regulatory Background

This document pertains only to the federal General Conformity regulations. Applicable state and municipal air quality regulations are discussed in the *American River Watershed Common Features General Reevaluation Report Final Environmental Impact Statement /Environmental Impact Report (December 2015)* and in subsequent project-level reviews.

National Ambient Air Quality Standards

The U.S. Environmental Protection Agency (EPA) develops and enforces federal regulations that govern air quality. The Federal Clean Air Act (CAA) requires EPA to set National Ambient Air Quality Standards (NAAQS) for pollutants considered harmful to public health and the environment. The EPA has identified six "criteria" air pollutants of nationwide concern: ozone, carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), lead, and particulate matter. Particulate matter is further subdivided into particulate with an aerodynamic diameter of 10 micrometers or less (PM_{10}) and particulates with an aerodynamic diameter of 2.5 micrometers or less ($PM_{2.5}$). Ozone is not directly emitted but is instead formed in heat and sunlight from the precursor pollutants of nitrogen oxides (NO_X) and volatile organic compounds (VOC). Although the definition varies slightly, Reactive Organic Gases (ROG) are frequently referred to interchangeably with VOC. SO_2, NO_X, and in some cases VOC and ammonia, are precursor pollutants for the formation of $PM_{2.5}$. Regulatory programs for the control of ozone focus on control of the precursor pollutants. Regulatory programs for the control of $PM_{2.5}$ focus on both direct emissions of $PM_{2.5}$ and precursor pollutants appropriate to the specific nonattainment area.

The CAA identifies two types of national ambient air quality standards. Primary standards provide public health protection, including protecting the health of "sensitive" populations such as asthmatics, children, and the elderly. Secondary standards provide public welfare protection, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings.

EPA designates areas of the State as attainment, nonattainment, maintenance, or unclassified for the various pollutant standards. An "attainment" designation for an area signifies that pollutant concentrations do not exceed the established standard. In contrast to attainment, a "nonattainment" designation indicates that a pollutant concentration has exceeded, and continues to exceed, the established standard. Nonattainment may vary in severity. To identify the severity of the issue and the extent of planning and actions required to meet the standard, nonattainment areas are assigned classifications that are commensurate with the severity of their pollution. Areas that previously exceeded a standard, but have come into compliance, are referred to as maintenance areas. Upon redesignation to maintenance status, an area is required to operate under a maintenance plan which establishes emission reduction measures that will ensure continued compliance with the NAAQS. The maintenance planning period extends for 20 years (two 10-year periods) after the redesignation date. Once the 20-year maintenance planning period is over, the CAA General Conformity Rule no longer applies and the area is considered to be in attainment.

Table 1 shows the NAAQS standards for each of the criteria pollutants. Several NAAQS have been revoked and replaced with more stringent standards over the years. Areas that were in nonattainment of the revoked standards are still subject to requirements to demonstrate compliance, however General Conformity does not apply to revoked NAAQS. Revoked NAAQS are not shown in Table 1.

Under the provisions of the CAA, the EPA requires each state with regions that have not attained the NAAQS to prepare a State Implementation Plan (SIP) detailing how these standards are to be met in each local area. The SIP is a legal agreement between each state and the federal government to commit resources to improving air quality. It serves as the template for conducting regional- and project- level air quality analysis. The SIP is not a single document but a compilation of new and previously submitted attainment plans, maintenance plans, emissions reduction programs, district rules, state regulations, and federal controls. Nonattainment and maintenance areas have a unique geography for each pollutant based on the physical region of the nonattainment area, and the meteorology, sources, and mechanisms that contribute to violations of the NAAQS.

Table 1. National Ambient Air Quality Standards

Pollutant	Averaging Time	Primary Standards	Secondary Standards	Form
Carbon Monoxide (CO)	8-hour 1-hour	9 ppm 35 ppm	—	Not to be exceeded more than once per year
Lead (Pb)	Rolling 3-month average	0.15 µg/m^3	Same as Primary	Not to be exceeded
Nitrogen Dioxide (NO_2)	Annual	53 ppb	Same as Primary	Annual mean
	1-hour	100 ppb	—	98th percentile of 1-hour daily maximum concentrations, averaged over 3 years
Particulate Matter (PM_{10})	24-hour	150 µg/m^3	Same as Primary	Not to be exceeded more than once per year on average over 3 years
Particulate Matter ($PM_{2.5}$)	Annual	12.0 µg/m^3	15.0 µg/m^3	Annual mean, averaged over 3 years
	24-hour	35 µg/m^3	Same as Primary	98th percentile, averaged over 3 years
Ozone (2015)	8-hour	70 ppb	Same as Primary	Annual fourth-highest daily maximum 8-hr concentration, averaged over 3 years
Ozone (2008)	8-hour	75 ppb	Same as Primary	Annual fourth-highest daily maximum 8-hr concentration, averaged over 3 years
Sulfur Dioxide (SO_2)	1-hour	75 ppb	—	99th percentile of 1-hour daily maximum concentrations, averaged over 3 years
	3-hour	—	0.5 ppm	Not to be exceeded more than once per year

Source: EPA 2019. ppm = parts per million; ppb = parts per billion; µg/m^3= micrograms per cubic meter; "—" = no applicable standard.

Attainment Status

Construction of the ARCF 2016 Project currently includes elements in Sacramento and Yolo Counties, and although construction is not currently planned in Solano, Sutter and Placer Counties, minor elements could affect these counties and they are included for completeness. Project emissions will also occur in the San Francisco Bay Area as materials are shipped, by barge, from expected locations adjacent to San Francisco and San Pablo Bays.

Table 2 lists the nonattainment and maintenance areas in the five counties, and their classification. The nonattainment and maintenance areas shown in Table 2 are located within two separate air basins: the Sacramento Valley and the San Francisco Bay Area.

Table 2. Attainment Status for the ARCF 2016 Project Area

Area Name Counties of Interest			
Sacramento Metro* Sacramento & Yolo (partial El Dorado, Placer, Solano, & Sutter)	**8-hr Ozone (2008)** 8-hr Ozone (2015)	***Nonattainment*** Nonattainment (recommended)	***Severe-15*** Moderate
Sacramento Sacramento; (partial El Dorado, Placer, Solano, & Yolo)	8-hr CO (2011) **$PM_{2.5}$ (2006)**	Maintenance** ***Nonattainment†***	Moderate Moderate
Sacramento County	PM_{10} (1987)	Maintenance	Moderate
San Francisco Bay Area (partial Solano)	8-Hour Ozone (2008) 8-Hour Ozone (2015) $PM_{2.5}$ (2006)	*Nonattainment* *Nonattainment* *Nonattainment*	Marginal Marginal Moderate
San Francisco-Oakland-San Jose (partial Solano)	8-hr CO (2011)	Maintenance	Moderate

Yuba City-Marysville (partial Sutter)	$PM_{2.5}$ (2006)	Maintenance	Moderate

Source: EPA 2019, EPA Greenbook, https://www3.epa.gov/airquality/greenbook/anayo_ca.html

*Sacramento Federal Ozone Nonattainment Area (SFONA)

**Sacramento completed its 20 years of maintenance of the CO standard on June 1, 2018.

† USEPA determined Sacramento $PM_{2.5}$ area attained the 2006 24-hr. (2006) NAAQS in May 2017, based on certified 2013-2015 monitoring data. Redesignation Request to be updated and submitted to USEPA.

The boundaries of the nonattainment and maintenance areas designated for implementation of rules and regulations to improve air quality are described in the individual SIPs for the pollutants in question, or are published in the Federal Register at Title 40 CFR, Subchapter C Part 81. The nonattainment and maintenance areas expected to be affected by ARCF 2016 Project emissions are:

- The Sacramento Federal Ozone Nonattainment Area (SFONA) which includes all of Sacramento and Yolo counties and portions of Placer, El Dorado, Solano, and Sutter counties.
- The Sacramento Federal $PM_{2.5}$ Nonattainment Area which is slightly smaller than the ozone nonattainment area and includes all of Sacramento County and portions of Yolo, Solano, Placer and El Dorado counties.
- The Sacramento PM_{10} Maintenance Area which includes all of Sacramento County.
- The San Francisco Bay Area Intrastate Air Quality Control Area (San Francisco AQCA, the 8-hour Ozone and $PM_{2.5}$ nonattainment area) which includes all of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, and Santa Clara counties and portions of Sonoma and Solano counties.

For the Sacramento Valley Air Basin, the ozone, PM_{10}, and $PM_{2.5}$ nonattainment and maintenance areas have different geographic footprints. For screening purposes, total project emissions for the entire SFONA, which has the largest geographic area, are analyzed and the smaller nonattainment or maintenance area emissions are only considered separately if needed.

General Conformity Components

The General Conformity process has four main components: an emissions analysis, an applicability determination, mitigation commitments, and an agency and public review. A discussion of each component of the process follows. The General Conformity Determination is the responsibility of the federal agency (USACE for the ARCF 2016 Project) and is subject to review by the air agencies for the local airsheds, the EPA, other agencies, and the public.

Emissions Analysis

An analysis of all direct and indirect emissions associated with the federal action must be completed and compared to *de minimis* thresholds to determine if General Conformity is applicable to the action. For the ARCF 2016 Project, emissions were estimated using the Sacramento Metropolitan Air Quality Management District's (SMAQMD's) *Road Construction Emissions Model* (RCEM), Version 8.1.0. The RCEM was developed by SMAQMD to analyze emissions from linear projects such as roadways, and for the ARCF 2016 Project. Emissions from barges were estimated using the SMAQMD *Harborcraft, Dredge and Barge Emissions Factor Calculator.* The emissions analysis is documented in a memorandum titled *American River Common Features 2016 Air Pollutant Emissions Methods and Results to Support a General Conformity Determination*, which is included in Appendix B to this document. Emission sources analyzed included a wide range of construction equipment and activities, on-road mobile sources (construction material delivery trucks and motor vehicles driven by contractor employees), as well as barge emissions resulting from the delivery of quarry rock and aggregate. The analysis memorandum evaluated two cases to address possible schedule slippage for project elements.

After the memorandum was prepared, USACE updated its anticipated project schedule. Although the component projects, the underlying modeling assumptions, and results did not change, the expected year of construction changed for many of the component projects. Erosion projects which were originally planned to be constructed in multiple years were consolidated into single construction seasons. As a result, the way that the component projects and model results were distributed among calendar years changed. Appendix C to this document contains several tables from the memorandum, updated to reflect USACE's best available schedule assumptions as of March 2020. Emission tables included in this General Conformity Determination document are consistent with these best available schedule assumptions.

The ARCF 2016 Project will be completed through numerous separate contracts over a minimum five-year period. Many elements of the Project are still in the design phase. Consequently, actual emissions will vary from the estimates set forth in this document. Conservative assumptions regarding construction methods and timing were used in the emissions analysis to determine the overall levels of control and mitigation that will be required. Table 3 shows the estimated total uncontrolled (no equipment controls applied; standard vehicle fleet assumptions) project emissions by year in the SFONA and the San Francisco AQCA. See Appendix C for project components and emission summation by year. Only nonattainment and maintenance pollutants are included in Table 3. Uncontrolled SO_2 emissions are estimated to be negligible in both the SFONA and the San Francisco AQCA and therefore are not shown in Table 3.

Table 3. Estimated Uncontrolled Emissions by Year and Control Area for the ARCF 2016 Project

Control Area	**Pollutant Emissions** (tons/yr.)			
SFONA	**ROG**	**NO_X**	**PM_{10}**	**$PM_{2.5}$**
2019	0.0	0.5	3.3	0.7
2020	3.4	**38.2**	8.3	2.9
2021	4.8	**52.6**	47.1	11.3
2022	7.8	**94.6**	97.2	22.8
2023	5.5	**65.1**	53.4	13.0
San Francisco AQCA	**ROG**	**NO_X**	**PM_{10}**	**$PM_{2.5}$**
2020	0.1	1.3	0.1	0.1
2021	0.5	8.0	0.4	0.3
2022	0.8	13.2	0.6	0.5
2023	1.0	16.8	0.8	0.7

Applicability

The General Conformity Rules established *de minimis* thresholds to screen projects for the potential to impose significant adverse air quality effects. Projects with annual total emissions from direct and indirect emissions less than the *de minimis* thresholds are not considered to be significant and do not require a General Conformity Determination. The *de minimis* thresholds vary based upon the severity of ambient pollution in an area. Table 4 summarizes the *de minimis* thresholds applicable for the ARCF 2016 Project area. Project emissions above these thresholds require a General Conformity Determination to demonstrate how emissions will be controlled and mitigated.

Table 4. General Conformity *De Minimis* Annual Thresholds for the ARCF 2016 Project Area

Control Area	Pollutant (NAAQS Standard)	Classification	*De Minimis* Threshold (tons per year)
SFONA	**Ozone (2008)**	**Severe – 15**	**25** (VOC and NO_X)
	PM_{10} (1987)	Maintenance	100
	$PM_{2.5}$ (2006)	Moderate	100 ($PM_{2.5}$, SO_2, and NO_X)
San Francisco AQCA	Ozone (2008)	Marginal	100
	$PM_{2.5}$ (2006)	Moderate	100 ($PM_{2.5}$, SO_2, and NO_X)

Note: VOC and ammonia are not considered precursor pollutants of concern for $PM_{2.5}$ formation in the Sacramento and San Francisco control areas.

Project emissions of criteria pollutants occurring within a nonattainment or maintenance area are compared to the applicable area thresholds for that pollutant, as displayed in Table 4 above. A comparison of the estimated uncontrolled ARCF 2016 Project emissions in Table 3 to the General Conformity thresholds in Table 4 shows that uncontrolled project pollutant emissions estimated within the San Francisco AQCA are a fraction of the *de minimis* thresholds for ROG, PM_{10}, and $PM_{2.5}$. And estimated project emissions of the fourth pollutant, NOx, in the San Francisco AQCA fall below the annual *de minimis* threshold. Within the SFONA, the estimated uncontrolled project emissions for ROG, PM_{10}, and $PM_{2.5}$ all fall below the *de minimis* thresholds. Estimated project emissions fall below *de minimis* level for NO_X as a precursor to secondary $PM_{2.5}$ formation.

Uncontrolled project NO_X emissions as a contributor to ozone formation within the SFONA are estimated to exceed the *de minimis* threshold, and therefore a General Conformity Determination is required for NO_X emissions within the SFONA.

Mitigation Commitments

Although General Conformity applies only to emissions over the thresholds, state and municipal air regulations require control of project pollutant emissions, and related reduction and mitigation commitments, as prescribed through the California Environmental Quality Act process. These commitments are discussed in the *American River Watershed Common Features General Reevaluation Report Final Environmental Impact Statement /Environmental Impact Report (December 2015)* and in supplemental documents addressing individual project elements.

Construction of the ARCF 2016 Project will require the use of many pieces of heavy construction equipment. The volume of required equipment can affect the ability of construction and equipment rental companies to provide a low-emitting vehicle fleet. USACE performed outreach to the construction industry to get feedback on the level of emissions control available on the overall construction fleet potentially available to complete the ARCF 2016 Project. Feedback from the construction industry supported a reasonably assumed ARCF 2016 construction equipment fleet with 90 percent of off-road equipment engines meeting EPA Tier 4 standards. Additionally, USACE has determined that further emission reductions can be achieved by requiring the use of equipment that meets a minimum Tier 1 standard (i.e., no Tier 0 or uncontrolled equipment would be allowed on site, without approval by the Corps. In order to gain approval, contractors must provide updated emissions estimates showing how the Tier 1 standard could be achieved through offsets or additional mitigation implementation).

USACE will first reduce NO_X emissions through specification of an emissions-controlled vehicle fleet, and secondly through obtaining NO_X offsets for any year in which the emissions with implementation of equipment controls exceed the *de minimis* threshold of 25 tons of NO_X emitted within the SFONA boundary. Table 5 lists the estimated NO_X emissions in the SFONA for the ARCF 2016 Project with equipment controls applied, assuming on-road truck emissions will be equivalent to emissions from model year 2010 or newer for the entire on-road truck fleet, and off-road equipment will achieve a fleetwide NO_X reduction equivalent to 90 percent of the emissions reduction if all equipment were equipped with Tier 4 engines. The 2015 ARCF GRR FEIS/EIR details emission control practices and mitigation measures in Section 3.11.6, Mitigation Measures.

Table 5. Estimated ARCF 2016 Controlled Emissions in the SFONA by Year and Air District

Year	**NO_x Emissions** (tons per year)		
	SFONA	***SMAQMD***	***YSAQMD***
2019	0.5	0.5	--
2020	5.1	5.1	--
2021	15.9	9.9	6.0
2022	**35.3**	30.8	4.5
2023	**30.3**	24.0	6.3

NOTE: Emissions calculations assume on-road equipment fleet achieves overall emissions of 2010 or newer model vehicles and 90% of the on-site equipment meets Tier 4 standards.

All direct and indirect emissions occurring within the SFONA must be considered in determining General Conformity applicability. The SFONA overlaps portions of multiple local air quality management districts. Table 5 and Figure 1 show the respective portions of estimated annual SFONA emissions generated in the Sacramento Metro AQMD and Yolo-Solano AQMD by ARCF 2016 Project construction. The Project emissions will primarily be generated from within the SMAQMD. The Sacramento Weir widening and associated levee improvement contracts occur within the Yolo-Solano Air Quality Management District (YSAQMD). No ARCF 2016 Project construction is planned in the higher elevation local air quality jurisdictions. That upper northeastern reach of the SFONA extends into parts of the Placer County Air Pollution Control District, Feather River AQMD, and El Dorado County AQMD.

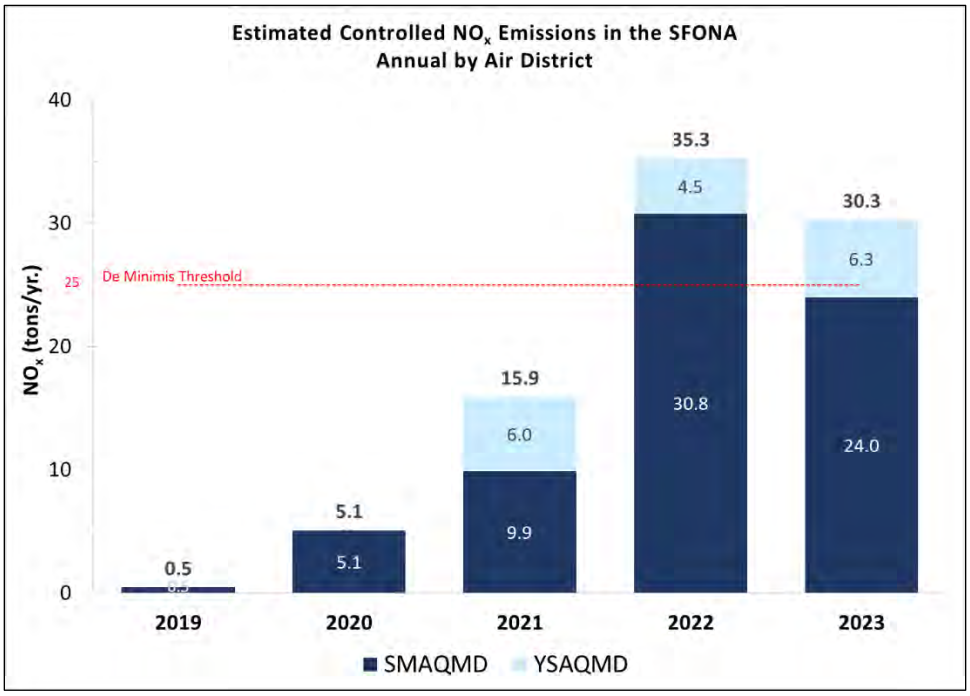

Figure 1. Estimated ARCF 2016 NO_x emissions in the SFONA Sacramento Metro and Yolo-Solano Air Quality Management Districts.

To mitigate the project's NO_X emissions within the SFONA, USACE will obtain NO_X emissions offsets from the local air quality agencies to fully offset total NO_X emissions – with construction fleet emissions controls applied – in 2022 and 2023. Emission offsets will not be required if emissions can be maintained below 25 tons per year of NO_X in the SFONA through equipment control measures.

Agency Reporting and Public Review

USACE must provide a notice of the Federal agency's Draft General Conformity Determination on the proposed action to the following parties at least 30 days before issuing a Final General Determination:

- The EPA Region 9 Office
- State and local air quality agencies
- Any federally-recognized Indian tribal government in the SFONA
- Where applicable, affected Federal land managers
- The agency designated under section 174 of the Act (the California Air Resources Board)
- The Metropolitan Planning Organization

Within 30 days after a Final General Conformity Determination is made, USACE must again notify the same parties.

USACE must make public its Draft General Conformity Determination by placing a notice by prominent advertisement in a daily newspaper of general circulation in the area affected by the ARCF 2016 Project, and by providing 30 days for written public comment prior to taking any formal action on the Draft Determination.

Following the public comment period on the Draft General Conformity Determination, the USACE must document responses to all comments received. The Final General Conformity Determination must be made public by placing a notice by prominent advertisement in a daily newspaper of general circulation in the area affected by the action within 30 days of the Final General Conformity Determination. Upon request by any person, comments and responses must be made available within 30 days of the Final General Conformity Determination. Both Draft and Final General Conformity Determinations for American River Watershed Common Features 2016 Project will be available on the USACE website for Sacramento Area Levees: sacleveeupgrades.com.

General Conformity Determination

The ARCF 2016 Project will be in conformity with the Clean Air Act and will not cause or contribute to a new violation, nor increase the frequency or severity of existing violations of the NAAQS. The following mitigation measures will be implemented to maintain conformity:

Measure 1: Actual project emissions of nonattainment and maintenance pollutants occurring within the SFONA will be tracked monthly using tools acceptable to the SMAQMD and YSAQMD. The tracking data will verify that all pollutants remain below the General Conformity *de minimis* thresholds, or are fully mitigated and offset. If actual tracked emissions exceed 25 tons per year NOx, yet the emissions were prospectively estimated at below the *de minimis* threshold, then USACE would obtain offsets to fully mitigate emissions accordingly.

Measure 2: In any calendar year where the project's equipment control measures are expected to be insufficient to maintain project NO_X emissions within the SFONA below the general conformity *de minimis* threshold of 25 tons per year, offsets will be obtained (through purchase or loan) to fully offset the project's total direct and indirect NO_X emissions for that year.

Measure 3 (equipment control measure): USACE will require the use of on-road trucks with 2010 or newer model year engines, or an equivalent emission reduction, in all construction contracts. Construction contracts will allow the use of older model trucks in limited circumstances with a contractor proposed program to reduce vehicle miles travelled and with pre-approved total project emissions estimates for the year.

Measure 4 (equipment control measure): USACE will require the use of Tier 4 emission control technology equivalent to a minimum 90 percent reduction, based on off-road equipment horsepower, relative to the reduction achievable if all equipment used Tier 4 control technology for NO_X emissions from off-road construction equipment. For the remaining 10%, all equipment must meet a minimum Tier 1 standard. No Tier 0 or uncontrolled equipment will be allowed on site, without approval by USACE. For compliance and approval, contractors must provide updated emissions estimates showing how the Tier 1 standard could be achieved through offsets or additional mitigation implementation.

Measure 5: Mitigation offsets will be obtained from the SMAQMD for NO_X emitted within the SFONA and Sacramento County. NO_X mitigation offsets will be obtained through the normal process described in SMAQMD Rule 205 Community Bank and Priority Reserve Bank. Specific sections of Rule 205 applicable to meeting the timing requirements of General Conformity Offsets are:

- Section 310 – Community Bank Account Approval Process,
- Section 314 – Reserving Essential Public Services Account Credits,
- Section 405 – Loan Initiation Date, and 500 – Monitoring and Records.

SMAQMD Emission Reduction Credit loan applications shall be submitted to the SMAQMD by June 14 of the year prior to emissions being offset, in order to ensure timely processing of the transaction and payment of all fees prior to January 1 of the following year.

Measure 6: Mitigation offsets will be obtained from the YSAQMD for NO_X emitted within the SFONA and the YSAQMD boundaries in accordance with the YSAQMD Rule 3.5 Emission Reduction Credits (ERC):

- Section 305 – Use of ERCs: Banking,
- Section 306 – Use of ERCs: Offsets
- Section 408 – Conversion of Air Emissions to ERCs.

USACE proposes to pay the YSAQMD a minimum deposit of 10% of the fees for each year's estimated emissions prior to January 1 of that year. Emission Reduction Credit loans will be paid as described in the mitigation NO_X offsets agreement maintained with the YSAQMD, and in accordance with the YSAQMD Rules including 3.6 Priority Reserve. Appendix A provides a *Draft YSAQMD - ARCF 2016 NO_X Offset Agreement* example. Calculations for actual emissions will be submitted annually to the YSAQMD for review and approval by February 1 following the construction season.

Measure 7: If enough NO_X mitigation offsets are not available from the SMAQMD or the YSAQMD, the balance of offsets will be obtained from a neighboring local air district, in accordance with General Conformity regulations 40 CFR 93.150-165.

DRAFT

YSAQMD – ARCF 2016 NO_X Offset Agreement

Memo (DRAFT)

To: Wesley Wong / USACE Sacramento District

From: Paul Hensleigh / Yolo-Solano Air Quality Management District

cc:

Date: March 22, 2021

Re: American River Common Features – Air Quality Offset Fees

Introduction

The air quality analysis performed for the Environmental Impact Report/Statement (EIR/EIS) for the American River Common Features (ARCF 2016) General Reevaluation Report (GRR) project identified that emissions of nitrogen oxides (NOx) would be generated by construction activities associated with the project. The ARCF 2016 project includes widening the Sacramento Weir and making improvements to the levee system. NOx emissions will occur within the jurisdictions of both the Sacramento Metropolitan Air Quality Management District (SMAQMD) and the Yolo-Solano Air Quality Management District (YSAQMD). Both the SMAQMD and the YSAQMD are included by the EPA in the Sacramento Federal Ozone Nonattainment Area (SFNA[1]). As the lead agency for the ARCF, the U.S. Army Corps of Engineers (USACE) proposes to establish an offset lease agreement with the YSAQMD to mitigate NOx emissions within the boundaries of the YSAQMD to comply with federal General Conformity regulations.[2]

Policy Context

The federal General Conformity Requirement as specified in section 176(c)(4) of the Clean Air Act, as amended, applies to areas that do not meet federal air quality standards. General Conformity requires that federal projects within such areas conform to the applicable air quality attainment plan. Therefore, the federal EPA establishes annual thresholds or *de minimis* emission rates in nonattainment areas. If expected emissions from a federal project exceed the applicable de minimis threshold, emissions must be mitigated to "net zero" – effectively a complete mitigation of all emissions of the regulated criteria pollutant. The SFNA is currently designated as nonattainment for the federal ozone standard. Since ozone is not a directly emitted pollutant, General Conformity applies to the ozone precursors of reactive organic gases (ROG) and NOx. The General Conformity threshold is 25 tons of ROG or NOx per calendar year in the SFNA.

General Conformity Determination

YSAQMD staff reviewed the USACE's Draft General Conformity Determination (released to the public on March 23, 2020). The determination estimated that NOx emissions associated with ARCF 2016 construction activities would exceed the de minimis general conformity threshold within the SFNA (25 tons per year) in the years 2022 and 2023. Of these total emissions, 4.5 and 6.3 tons would be generated within the YSAQMD in 2022 and 2023 respectively.

[1] Referred to elsewhere in the GCD report as "SFONA."
[2] 40 CFR §93.150-165

Requested Offsets and Associated Fees

In the ARCF 2016 project EIR/EIS, the USACE proposed mitigation measures to reduce overall NOx emissions from the project. The USACE requests NOx offsets to fully mitigate NOx emissions generated within the YSAQMD when annual project emissions exceed the general conformity threshold. The USACE proposes to provide payment of offset fees to the YSAQMD, which will be used by the YSAQMD to obtain emission reductions within its jurisdiction. Offset fees will be funded through an ERC (Emissions Reduction Credits) loan, subject to the YSAQMD Rules and CAA regulations, and are estimated on the following basis:

- The offset fee rate per ton of NOx will be equivalent to the cost-effectiveness limit used by the YSAQMD to implement its FARMER agricultural-equipment replacement program. This rate is currently $18,262 per ton of NOx.
- The estimated loan amount for 2022 NOx offsets is $18,262/ton x 4.5 tons = $82,179.
- The estimated loan amount for 2023 NOx offsets is $18,262/ton x 6.3 tons = $115,050.
- The USACE will provide an additional 10 percent administrative fee for implementation of the NOx offset program. Consequently, the total estimated amount to offset NOx emissions in the YSAQMD in 2022 is $82,179 x 1.1 = $90,396.90 and
  2023 is $115,050 x 1.1 = $126,555.
- The USACE proposes to pay a non-refundable deposit equal to 10% of the estimated amount for each year prior to the beginning of that year. Construction information collected during the course of the year will be used to determine the actual amount of emissions generated. These calculations will be submitted to the YSAQMD by February 1st 2023 and 2024 for review and approval. Actual emissions may be greater or less than the estimated emissions. Based on the collected construction information at the end of a year, any balance due will be paid to the YSAQMD by March 1st of 2023 and 2024.

Monitoring of Offset Fee Projects

The YSAQMD will provide the USACE with a list of the YSAQMD emission reduction program projects funded with ARCF offset fees, including a description of each YSAQMD project. If ARCF 2016 construction design developments or schedule changes lead to higher emissions than previously estimated, then the YSAQMD remains committed to assist the USACE in obtaining additional emission reduction credits for conformity with the Clean Air Acts. And if future construction design developments or schedule changes lead to substantially lower than previously estimated emissions, then the YSAQMD also intends to assist the USACE in applying emissions reduction credits throughout the ARCF 2016 for conformity with the Clean Air Acts. Therefore, the ARCF 2016 Project will not contribute to a new violation, nor increase the frequency or severity of existing violations of the NAAQS.

APPENDIX B

American River Common Features (ARCF) 2016
Air Pollutant Emissions Methods and Results to Support a General Conformity Determination

Memorandum from Moore Noise, LLC.
February 4, 2020

Moore Noise, LLC

Memo

To:	SAFCA and U.S. Army Corps
From:	Martha Moore / Moore Noise, LLC
c:	Drew Sutton / GEI Consultants
Date:	February 4, 2020
Re:	**American River Common Features (ARCF) 2016** **Air Pollutant Emissions Methods and Results to Support a General Conformity Determination**

Background

The American River Common Features (ARCF) 2016 Project will be in design, contracting and construction from 2019 through 2024. The U.S. Army Corp of Engineers (USACE), Sacramento Division is managing the ARCF 2016 Project. The ARCF 2016 Project is divided in four categories for purposes of design and contracting. The categories are: Erosion Protection, Sacramento Weir Widening, Stability and Seepage, and Mitigation. Multiple years of construction contracts are planned under each category.

Initial estimates of air pollutant emissions from construction of the ARCF Project exceeded the federal General Conformity Threshold of 25 tons per year for emissions of nitrogen oxides (NO_X) within the Sacramento Federal Nonattainment Area (SFNA) for ozone. NO_X contributes to the formation of ozone. Other pollutants of concern under the General Conformity regulations (40 Code of Federal Regulations [CFR] 98) for the Project area are particulates (PM) and volatile organic compounds (VOC). As a result of this exceedance, more detailed emission estimates were prepared in planning for compliance with the General Conformity regulations. This memorandum presents the methods used in the emissions estimates and the results of the estimates.

Methods

Information regarding design and expected construction methods were developed in coordination with the Project design teams using information developed through June 2019. Where design was not complete and information was preliminary, the assumptions developed to support the emission estimates were more conservative. In general, the goal was to develop emission estimates that are conservative (high), but reasonable, for use in planning for mitigation of project effects.

Once developed, information on material quantities and equipment for each of the four ARCF Project categories was input into the Road Construction Emissions Model (RCEM) Version 8.1.0. Version 8.1.0 is approved for use for federal compliance demonstrations. The Sacramento Metropolitan Air Quality Management District's (SMAQMD) *Harborcraft, Dredge and Barge Emission Factor Calculator* was used to calculate emission factors for use in estimating emissions from barge transport of construction materials.

RCEM Model Input Assumptions

Attachments 1 through 5 detail the modeling assumptions and summarize the input data for the RCEM for each of the ARCF Project categories. A list of the Attachment titles follows:

- Attachment 1 – Modeling Assumptions, Erosion Protection
- Attachment 2 – Modeling Assumptions, Sacramento Weir
- Attachment 3 – Modeling Assumptions, Seepage and Stability
- Attachment 4 – Modeling Assumptions, Mitigation Sites
- Attachment 5 – Roadway Construction Emissions Model Input Assumptions Summary for Each Project Contract

Results

Tables 1 through 6 summarize the results of the model runs and compare the results to the General Conformity Thresholds for the SFNA. Although all emissions shown in the summary tables will occur within the boundary of the SNFA and must be considered in total for comparison to the General Conformity thresholds, there are two air quality agencies with jurisdiction over the emissions. The Sacramento Weir category emissions will occur within the boundary of the Yolo Solano Air Quality Management District (YSAQMD). Emissions from all other categories will occur within the boundary of and under the jurisdiction of the SMAQMD.

The RCEM Input file for the unmitigated case for each contract and the RCEM Output file summary page for each model run are included in Attachment 6 – RCEM Input Files. The input files for the two other mitigation scenarios are identical to the unmitigated input file except for the selection within the RCEM under “Mitigation Options”. The table below shows the RCEM mitigation option for each scenario.

Modeling Scenario	RCEM Selections	
	On-Road Fleet	**Off-Road Equipment**
Unmitigated	No Mitigation	No Mitigation
On-Road Mitigated	2010 and Newer On-road Vehicles Fleet	No Mitigation
On-Road & All Tier 4 Mitigated	2010 and Newer On-road Vehicles Fleet	Tier 4 Equipment – All Tier 4 Equipment

Where unmitigated emissions are shown to be below the General Conformity Threshold, no further analysis was competed for that pollutant in this document. However, the mitigation commitments contained in Environmental Impact Statements and Reports for the Project and the contracts will be implemented and will reduce emissions for pollutants other than NO_X. For NO_X, the USACE is proposing to mitigate emissions first through requiring the use of a fleet of reduced emissions construction vehicles, and then obtaining NO_X emissions offsets through the SMAQMD for the Erosion Protection, Seepage and Stability, and Mitigation category emissions; and through the YSAQMD for the Sacramento Weir category emissions.

Tables 1, 2 and 3 show emissions with no vehicle fleet mitigation, for mitigation applied to only on-road vehicles, and for the fully mitigated case for both on-road and off-road vehicles. USACE is committing to aggressive control of construction vehicle emissions, including the following emissions controls for NO_X:

- 2010 and Newer On-Road Vehicle Fleet, with limited exceptions
- 90% of rated horsepower (HP) of the on-site construction fleet will be equipped with Tier 4 controls

- All on-site construction fleet will meet at least Tier 1 standards, with limited exceptions pre-approved by USACE.
- Limited exceptions would be allowed only with USACE approval and after contractors provide updated emission estimates showing compliance with total emissions or how emissions would be achieved through offsets or additional mitigation.

Emissions are shown with the 90 percent mitigation assumed for off-road vehicles and assuming that on-road vehicles can achieve emissions equivalent to 100 percent of the vehicle fleet being 2010 or newer. The mitigated vehicle fleet emissions are compared to the General Conformity Thresholds to determine the additional NO_X emissions mitigation that may be required in offset projects.

Two emission cases were considered to account for the possibility of schedule slippage to later years. Mitigation offsets for NO_X will be planned to cover the estimated worst case of the emissions scenarios in order to secure enough offsets to fully mitigate potential emissions. The worst case estimated emissions scenario is shown in Table 3. NO_X offsets will be needed in years 2021, 2022, and 2023 to fully mitigate the anticipated NO_X emissions. Because emissions offsets from the SMAQMD are allocated quarterly, Table 4 shows the anticipated allocation of emissions to calendar quarters. Tables 5 and 6 shows the allocation of the quarterly emissions to the SMAQMD and the YSAQMD.

As each contract is bid, emissions can be refined based on final design information to support the acquisition of and payment for the emission offsets needed, provided the timing to request offsets from the air agencies can be met.

Notes: [1] From USACE; [2] No Mitigation

These estimates are preliminary and conservative. Emission estimates will change as the design for these contracts progresses. As a result, the actual emissions may vary somewhat and emissions may shift between years. In all cases analyzed, NOx mitigation offsets will be required in 2021, 2022, and 2023 to fully offset NOx emissions.

Notes: [1] From USACE; [2] No Mitigation

These estimates are preliminary and conservative. Emission estimates will change as the design for these contracts progresses. As a result, the actual emissions may vary somewhat and emissions may shift between years. In all cases analyzed, NOx mitigation offsets will be required in 2021, 2022, and 2023 to fully offset NOx emissions.

Attachment 1

Modeling Assumptions

Erosion Protection

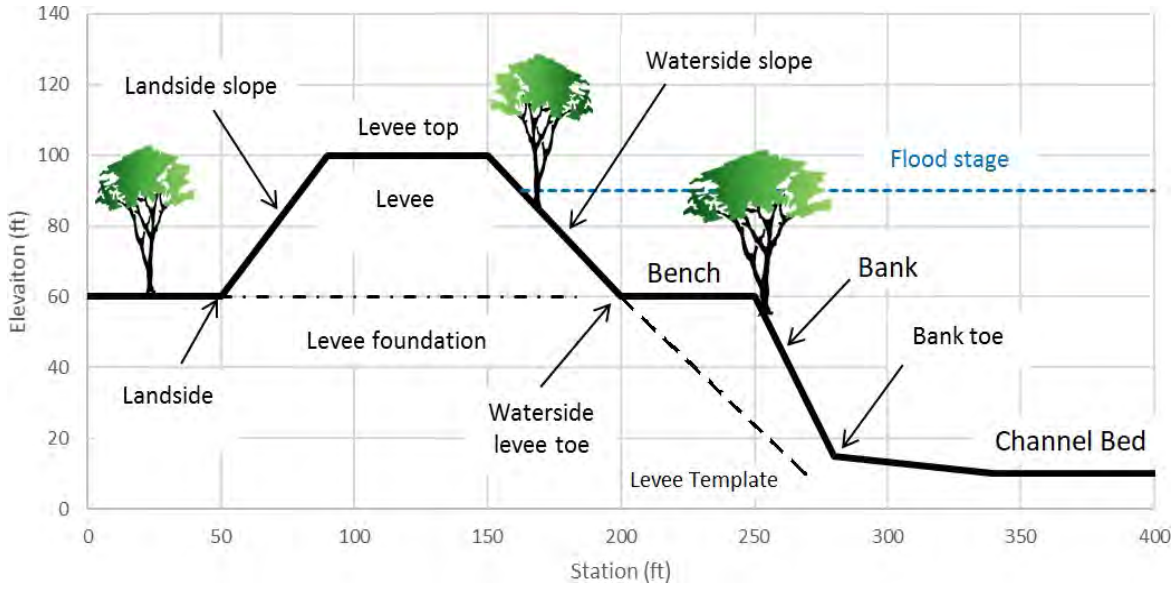
Supporting Calculations for Material Volumes, Equipment, and Quarterly Allocation of Emissions – Erosion Protection

General Information

The erosion protection contracts will construct erosion protection repairs on the American and Sacramento Rivers. The following table shows the currently anticipated and conservative schedule assumptions for construction of Erosion Protection contracts. Two cases are evaluated for timing. Case 1 is shown as X. Case two is shown as (X).

Year of Construction	2020	2021	2022	2023
American River				
Contract 1 (Subreach 2)	X	(X)		
Contract 2 (Subreaches 1, 3, 4)		X	X (X)	(X)
Contract 3 (for now assume not needed)				
Contract 4 (for now assume not needed)				
Sacramento River				
Contract 1 (55.2L)	X	(X)		
Contract 2		X	X (X)	(X)
Contract 3			X	X
Contract 4 (for now assume not needed)				

The following graphic shows common design elements for the Erosion Protection repair sites.



General Construction Methods for Erosion Protection (input from Joe Reynolds/USACE estimator) – rock is placed bottom to top. Above the water line – rock is placed with interstitial soil at approximately 70% rock/30% soil mix. On benches soil is placed on top of rock/soil layer for planting. Equipment can generally place 300 ton/hour, with ½ acre disturbed per day per site (Joe Reynolds, 4/11 email). For all projects we should assume end dump trucks at 15 cubic yards/truck trip.

For basic equipment assume tracked excavators and dozers (D6). An equipment set up for each site will consist of clam shell on barge to unload (or crane/loader for trucked material), dozer to push soil around, excavator to mix rock/soil, water truck. Multiple construction sites may operate simultaneously. Generally, grubbing is not performed. Vegetation is cut off at ground level for removal. Based on low to no grubbing, the total volume of exported material for the erosion contracts was adjusted down to 1,000 cubic yards per 15 acres for contracts without a cut bank. Cement will come from in-town Sacramento. Lime will come from Stockton.

American River Erosion

Project Definition: These contracts will provide erosion protection on the American River from the confluence with the Sacramento River upstream to the end of the federal levee system (approximately 11 miles) – this is broken into four subreaches for the project:

- Subreach 1 – Confluence to Paradise Bend
- Subreach 2 – Paradise Bend to Howe Avenue Bridge
- Subreach 3 – Howe Ave Bridge to Watt Ave Bridge
- Subreach 4 – Upstream of Watt Ave Bridge to end of the federal levee system (~RM 13, Goethe or Riverbend Park)

The American River in-water construction window is August 1 – October 31 (possibly Nov 30). Site preparation could occur prior to 8/1. Tree trimming will occur December to February to avoid nesting birds. Rip rap will be delivered to American River sites by truck. Rock import to construction sites will occur in June prior to the work window.

For the air quality emissions analysis, Subreach 2 (Contract 1) is used as the basis for estimating quantities of materials to be used for all American River Erosion contracts. Subreach 2 extends from about River Mile 5.1 near Paradise Bend upstream to RM 7.8 near the Howe Avenue bridge. Information on the current design plan for Subreach 2 was take from the *Lower American River Subreach 2 Summary of Bank Protection Conceptual Design Process (10% Basis of Design Report), Draft Report*, November 30, 2018.

Only material volumes for Subreach 2-1 are used to estimate material volumes for future years (Contract 2) based on the linear feet of erosion protection. Data for Subreach 2-3 includes a cut-bank design which is not assumed for other subreaches. The repair sites along Subreach 2 are:

Site 2-1: Repair site 2-1 includes 0.8 miles of the left bank between RM 5.8 and 6.6
Site 2-2: Repair site on the right bank starting near Howe Avenue and extending downstream about 1,000 feet (0.2 miles).
Site 2-3: Repair site located on the right bank that extends from about RM 7.2 downstream to RM 5.8. (1.4 miles)

The Contract 1 total Subreach length is approximately 2.4 miles (12,700 feet). Assuming a 100-foot wide construction corridor, this would be 29 acres. The area of clearing and grubbing (actual work area) is smaller and shown in the following tables.

Repair Site 2-1, 2-2, and 2-3 Quantities

Site	Material	Quantity	Unit
2-1	Rock Riprap	126,500	tons
2-1	Topsoil (Planting Benches	25,500	tons
2-1	Planting Area	2.5	acres
2-1	IWM	200	Trees
2-2	Rock Riprap	10,500	tons
2-2	Topsoil (Planting Benches	5,500	tons
2-2	Planting Area	0.4	acres
2-2	IWM	55	Trees
2-3	Cobble	36,500	Tons
2-3	Excavation and Off haul	135,000	cubic yards
2-3	Planting Area	12	acres

*Site 2-3 will have a cut-bank design

Data from Tables 4-3, 4-6, and 4-9 of *Attachment 6 to the Lower American River Subreach 2 Summary of Bank Protection Conceptual Design Process (10% Basis of Design Report)*, Draft Report, November 30, 2018.

Additional Information Repair Site 2-1, 2-2, 2-3 Quantities

Site	Material	Quantity	Unit
2-1	Clearing and Grubbing	2.4	Acres
2-2	Clearing and Grubbing	--	Acres
2-3	Clearing and Grubbing	14.3	Acres

Data from Tables 5-1, 5-2, and 5-3 of *Attachment 6 to the Lower American River Subreach 2 Summary of Bank Protection Conceptual Design Process (10% Basis of Design Report)*, Draft Report, November 30, 2018.

Total Material Volume Estimates for Subreach 2 (Contract 1)

Type	Material	Quantity	Units	Miles Traveled
Export	Clearing and Grubbing	16.7 (1,100)	Acres (cubic yards)	14
Import	Rip Rap	137,000 (83,000)	Tons (cubic yards)	50
Import	Topsoil Planting Bench	31,000 (23,000)	Tons (cubic yards)	5
Import	Cobble	36,500 (20,300)	Tons (cubic yards)	50
Export	Excavation and Off-haul	135,000	cubic yards	14
Import	IWM	255	Trees	

Note: Estimated haul distances per USACE staff (Anne Baker, email 2/22/2019). Assume: 1.65 ton/cubic yard for rip rap, 1.35 ton/cubic yard for topsoil, 1.8 ton/cubic yard for aggregate/cobble.

Estimated days to place rip rap at expected placement rate of 300 tons/hour. 137,000 tons/3,000 tons per 10-hour day = 46 days. Only one set of placement equipment required to complete placement for Contract 1 during the work window of August 1 – October 31. Expected acreage disturbed per day is ½ acre.

Total Estimates for Contract 2 (Subreach 1, 3, and 4, assumes no cut-bank construction)

Type	Material	Basis Quantity Subreach 2-1 (0.8 miles)	Estimated Subreach 1 and 4 (5 miles each)	Estimated Subreach 3 (2.2 miles)	Units	Miles Traveled
Export	Clearing and Grubbing	2.4	15 (1,000)	6.6 (440)	Acres (cubic yards)	14
Import	Rip Rap	126,500	790,625	347,875	Tons	50
Import	Topsoil Planting Bench	25,500	159,375	70,125	Tons	5
Import	IWM	200	1,250	550	Trees	

Note: Subreach 1: RM 0 to 5 = 5 miles; Subreach 2: RM 5 to RM 7.8 = 2.8 miles; Subreach 3 - RM 7.8 to RM 9 = 2.2 miles; Subreach 4: RM 9 to RM 14 = 5 miles

Contract 2 Summary of Material Quantities

Subreach	Acres Disturbed	Tons (CY) Rip Rap	Tons (CY) Topsoil
1	15	790,625 (479,200)	159,375 (118,100)
3	6.6	347,875 (210,800)	70,125 (51,950)
4	15	790,625 (479,200)	159,375 (118,100)
Total	**36.6**	**1,929,125 (1,169,200)**	**388,875 (288,150)**
Per Season	**18 (1,200 cubic yards)**	**964,563 (584,600)**	**194,438 (117,800)**

Assume: 1.65 ton/cubic yard for rip rap, 1.35 ton/cubic yard for topsoil. CY = cubic yard.

Subreaches 1, 3, and 4 are planned for completion in 2 seasons. Assume an even split between seasons – 1,929,125 tons rip rap/ 2 seasons = 964,562 tons/season. To estimate days to place rip rap: 964,562 tons/ 3,000 tons per 10-hour day = 322 days to place. Assume 22 days/month for 3 months = 66 days per season available. This would require **5 sets** of placement equipment for both years to complete placement during the work window of August 1 – October 31. Expected acreage disturbed per day is ½ acre per worksite = 2 ½ acres/day for Contract 2 (Subreaches 1, 3, and 4). The total estimated length of the Contract 2 Subreaches is 12.2 miles (64,400 feet), or 32,200 feet per season. Assuming a 100-foot wide construction corridor, this would be 74 acres. The area of clearing and grubbing (work area) is smaller and shown in the table ***Contract 2 Summary of Material Quantities*** above.

Construction equipment for American River Erosion Contract 1 was reviewed with the project team on 6/27/2019. It was agreed that the following equipment was a conservative (an extra set of basic equipment during grading/excavation) estimate of needed equipment:

American River Contract 1 Assumed Equipment

Equipment	Grubbing/Clearing Phase (Number)	Grading/Excavation Phase (number)
Cranes (basic)		2
Excavators (basic)	6	2
Generators	1	1
Graders		2
Off-Highway Trucks		2
Other Construction Equipment		1
Other General Industrial Equipment		2
Material Handling Equipment		1
Rubber Tired Dozers (basic)		2
Signal Boards	6	6
Skid Steer Loaders		3
Sweepers/Scrubbers (basic)	1	1
Tractors/Loaders/Backhoes		2
Trenchers		2

To estimate equipment needed for the American River Contract 2, grubbing and clearing was assumed to have the same equipment each year as Contract 1 based on the estimated acreage cleared (Contract 1: 16.7 acres, Contract 2: 36.6 acres in 2 years or 18.3 acres per year). For the Grading and Excavation Phase, basic equipment was assumed at 5 sets plus an extra set, other equipment was adjusted up slightly. Equipment assumed for each year of Contract 2 is shown below.

American River Contract 2 Assumed Equipment

Equipment	Grubbing/Clearing Phase (Number)	Grading/Excavation Phase (number)
Cranes (basic)		6
Excavators (basic)	6	6
Generators	1	3
Graders		4
Off-Highway Trucks		6
Other Construction Equipment		1
Other General Industrial Equipment		2
Material Handling Equipment		1
Rubber Tired Dozers (basic)		6
Rubber Tired Loaders		4
Signal Boards	6	6
Skid Steer Loaders		3
Sweepers/Scrubbers (basic)	1	1
Tractors/Loaders/Backhoes		3
Trenchers		2

The estimated quarterly distribution of emissions for the American River Contracts is shown below.

Year	Q1	Q2	Q3	Q4
All Years		On-Road	1/3	2/3

Sacramento River Erosion (55.2 L)

Project Definition: These contracts will provide erosion protection on the Sacramento River from the American River confluence downstream to Freeport (approximately 10 miles). On the Sacramento River, work will only occur on the left bank (looking downriver). Subreach 55.2L (Contract 1) will be used as the basis of estimates for the Sacramento River contracts.

The Sacramento River in-water work window is July 1 to October 31. Site preparation could occur prior to July 1. The tree trimming window is December to February. Rip rap (quarry stone and soil-filled quarry stone) will be delivered to Sacramento River sites by barge. The expected shipping approach will use 4-ganged barges from the Bay Area to Rio Vista, anchor at Rio Vista and use smaller tugboats to deliver single barges to construction sites for offloading. Information on the expected horsepower of tugboat engines was provided by staff at Dutra Materials in San Rafael, California. A push boat used to move materials from the quarry in San Rafael to Rio Vista on the Sacramento River typically has two engines at 800 horsepower each (1,600 horsepower total). Typical tugs for movement in the Sacramento River have a single engine at approximately 700 horsepower (Dennis Ferguson, personal communication).

For purposes of the air quality emissions analysis Subreach 55.2L is used as the basis of the material volume estimates for all Sacramento River reaches on a per foot basis. From the *Basis of Design Office Report Sacramento River Bank Protection Project*, DRAFT, Ayres Associates, June 2008, the original length of Subreach 55.2L was 690 feet. At 30 percent design, the length of Subreach 55.2L was increased to 1,150 feet (an increase by a factor of 1.68). The table below shows the original material quantities estimated for Subreach 55.2L, and the increased quantities expected for the increase in the length of the Subreach.

Estimate of Material Quantities for Sacramento River Erosion Contract 1

Phase	Estimated Quantity (original 690 ft basis)	Estimated Quantity (1,150 ft basis)	Unit
Clearing	0.81	1.4 (93)	Acres (cubic yards)
Embankment Material, 0.5' Soil Cover	660	1,100	cubic yards
Soil-Filled Quarry Stone	3,691 (6,274)	6,200 (10,500)	cubic yards (tons)
Quarry Stone	10,054 (22,581)	16,800 (37,700)	cubic yards (tons)
Erosion Control Seeding	0.71	1.2	Acres
In-Stream Wood Material	65	109	Each
Fascines	586	980	Each

Data from *Basis of Design Office Report Sacramento River Bank Protection Project*, Appendix G – Quantities, DRAFT, Ayres Associates, June 2008. Embankment soil cover from Figure 6.1 of the Design Office Report.

Estimated days to place rip rap at the expected placement rate of 300 tons/hour - 48,200 tons (10,500 + 37,700)/ 3,000 tons per 10-hour day = 16 days. Using 22 days/month of construction one set of

placement equipment would be required to complete placement during the work window of July 1 – October 31. Expected acreage disturbed per day is ½ acre for Contract 1.

Estimate of Material Quantities for Sacramento River Erosion Contracts 2 and 3

The overall estimated length of the Sacramento River Erosion Control Contracts is 29,600 feet. Contracts 2 and 3 are assumed to evenly divide the length remaining after Contract 1 is completed. Contract 2 and 3 are further estimated to required two years each of approximately equal material handling and length for construction duration. Material quantities for Contracts 2 and 3 are calculated on an annual basis by increasing the Subreach 55.2L volumes as follows – total length of 29,600 feet minus Contract 1 length of 1,150 feet = 28,450 feet remaining. This is allocated to Contract 2 and 3 at half of the total length or 14,225 feet for each Contract, and further allocated to each year at half of the individual contract length (7,113 feet). Material quantity estimates are based on the original Subreach 55.2L design at 690 feet, and material quantities are increased by a factor of 10.3 (7,113 feet/690 feet). The estimated material quantities for each year of Contract 2 and 3 are shown in the table below.

Estimated Material Quantities for Contracts 2 and 3 per Contract and Year

Phase	Estimated Quantity (690 ft basis)	Estimated Quantity per Contract per Year (7,113 ft basis)	Unit
Clearing	0.81	8.3 (550)	Acres (cubic yards)
Embankment Material, 0.5' Soil Cover	660	6,803	cubic yards
Soil-Filled Quarry Stone	3,691 (6,274)	38,047 (64,672)	cubic yards (tons)
Quarry Stone	10,054 (22,581)	103,636 (232,764)	cubic yards (tons)
Erosion Control Seeding	0.71	7.3	Acres
In-Stream Wood Material	65	670	Each
Fascines	586	6,040	Each

Estimated days to place rip rap at the expected placement rate of 300 tons/hour - 297,436 tons (64,672+232,764)/ 3,000 tons per 10-hour day = 99 days. Using 22 days/month of construction (88 days per season) two sets of placement equipment would, conservatively, be required to complete placement during the work window of July 1 – October 31. However, the project team anticipates that up to 4 work sites may be active simultaneously.

Expected acreage disturbed per day is ½ acre per worksite or 2 acres/day for Contracts 2 and 3 based on 4 active sites.

Construction equipment for the Sacramento River Erosion Contract 1 was estimated based on the American River Contract 1. The estimate of needed equipment is:

Sacramento River Contract 1 Assumed Equipment

Equipment	Grubbing/Clearing Phase (Number)	Grading/Excavation Phase (number)
Cranes (basic)		2
Excavators (basic)	6	2
Generators	1	1
Graders		2
Off-Highway Trucks		2
Other Construction Equipment		1
Other General Industrial Equipment		2
Material Handling Equipment		1
Rubber Tired Dozers (basic)		2
Signal Boards	6	6
Skid Steer Loaders		3
Sweepers/Scrubbers (basic)	1	1
Tractors/Loaders/Backhoes		2
Trenchers		2

Sacramento River Erosion Contract 2 is assumed to use the same clearing/grubbing equipment used for American River Contract 1. Equipment for grading and excavation is estimated to be the same as American River Contract 1, but with enough sets of basic equipment to operate 4 sites simultaneously. Expected equipment for Sacramento River Erosion Contracts 2 and 3 is shown below:

Sacramento River Contracts 2 and 3 Assumed Equipment

Equipment	Grubbing/Clearing Phase (Number)	Grading/Excavation Phase (number)
Cranes (basic)		4
Excavators (basic)	6	4
Generators	1	1
Graders		2
Off-Highway Trucks		4
Other Construction Equipment		1
Other Construction and Industrial Equipment		2
Material Handling Equipment		1
Rubber Tired Dozers (basic)		4
Signal Boards	6	6
Skid Steer Loaders		4
Sweepers/Scrubbers (basic)	1	1
Loaders/Backhoes		2
Trenchers		2

The estimated quarterly distribution of emissions for the Sacramento River Contracts is shown below.

Year	Q1	Q2	Q3	Q4

Modeling Assumptions

Sacramento Weir

Supporting Calculations for Material Volumes, Equipment, and Quarterly Allocation of Emissions – Sacramento Weir

General Information

The Sacramento Weir contracts will construct a new levee section and demolish a temporary levee section near the Sacramento Weir, widen the weir, install a sheet pile cut-off wall with jet grouting, construct a fish passage channel, relocate a road on a constructed bridge section, construct a railroad bridge, place erosion protection and construct additional improvements in support of the primary construction activities. The table below shows the schedule used in the air quality analysis. The only variation anticipated to the schedule is the possibility of construction of the railroad (RR) bridge piles in 2021 instead of 2022. Case 1 is shown as X. Case 2 with the early RR bridge pile installation is shown as Case 2 with (X).

The expected construction schedule is April 15, 2021 to November 1, 2023 year around. Vegetation removal could occur in winter 2021.

Sacramento Weir Anticipated Schedule for Analysis

	2020	2021	2022	2023
Construct new levee and concrete liner, sheet pile cut-off wall foundation, site prep, temporary road, realigned road, construct island		X		
Construct River Road and RR Bridges, passive weir		(X)	X	
Degrade levees, construct fish passage channel, place erosion protection				X

General Construction Assumptions:

- Concrete, asphalt, aggregate, and pre-cast haul distances will be 30 miles
- Import soil haul distance will 30 miles
- Export soil will be disposed of on site with an assumed 0.6-mile haul distance
- Weir gates will be imported from out of state with an assumed haul distance of 200 miles within the Sacramento Federal Nonattainment Area (SFNA) air basin. Assume a total of 5 truckloads for delivery of the weir gates.
- Assume all haul trucks are 15 cubic yard end dumps.
- Assume River Road and Railroad Bridge decking is pre-cast members.
- Assume no degrading (excavation) for sheet piling.
- Assume weir, and north levee slope protection are poured in place concrete by pre-mix trucks (sourced at Rancho Cordova). Rebar will come on a flatbed truck. Assume 40,000 pounds (20 tons) rebar per load.
- Assume quarry stone will be delivered by barge. The expected shipping approach will use 4-ganged barges from the Bay Area to Rio Vista, anchor at Rio Vista and use smaller tugboats to deliver single barges to construction sites for offloading. Information on the expected horsepower of tugboat engines was provided by staff at Dutra Materials in San Rafael,

California. A push boat used to move materials from the quarry in San Rafael to Rio Vista on the Sacramento River typically has two engines at 800 horsepower each (1,600 horsepower total). Typical tugs for movement in the Sacramento River have a single engine at approximately 700 horsepower (Dennis Ferguson, personal communication).

At an air emissions review meeting on June 27, 2019, project material volumes were adjusted to the contemporaneous design as shown in the table below:

Sacramento Weir Materials Summary Table

Year	Action	Material	Volume	Units
2021	Import	Sheet Piles		
	Import	Soil	370,000	CY
	Import	Concrete	8,000	CY
	Import	Rip Rap (Quarry Rock)	25,000	CY
2022	Import	Asphalt	1,750	CY
	Import	Aggregate	15,000 1,500	CY CY
	Import	Concrete	13,700 7,600	CY CY
	Import	Rebar	686 556	Tons Tons
	Export Import Import	Soil	43,000 3,000 5,150	CY CY CY
	Import	Piles	216 200	Units Units
	Import	Pre-Cast Deck Panels Gates		
2023	Export	Soil	370,000 215,000 54,000	CY CY CY
	Import	Rip Rap (Quarry Rock)	75,000	CY
	Import	Aggregate	1,700 250	CY CY

At an air emissions review meeting on June 27, 2019, anticipated construction equipment was reviewed and adjusted as shown in the table below:

Sacramento Weir Assumed Construction Equipment

Equipment	Grubbing/ Clearing 2021 (Number)	Grading/ Excavation 2021 (number)	Grading/ Excavation 2022 (number)	Grading/ Excavation 2023 (number)
Bore/Drill Rigs		1		
Cement and Mortar Mixers		4	4	2
Cranes		4	4	2
Excavators	3	3	3	3
Generators	1	2	2	2
Graders			1	1

Modeling Assumptions

Seepage and Stability

Supporting Calculations for Material Volumes, Equipment, and Quarterly Allocation of Emissions – Seepage and Stability

General Information

The Seepage and Stability contracts will complete levee improvements primarily along the left bank (looking downstream) of the Sacramento River from the confluence with the American River through the pocket areas of Sacramento. Some improvements are also included along the North Area Streams, and on Magpie Creek. Improvement types will include cut-off walls (either soil bentonite or deep mix method [DMM]), seepage and stability berms, and relief wells. At the Magpie Creek Diversion Canal improvements will include raising the left bank levee, constructing a new levee and maintenance road along the west side of Raley Boulevard, adding a new maintenance road between Vinci Avenue and Dry Creek Road, adding erosion protection to the channel, and installing floodgates and culverts. Most of the Seepage and Stability contracts are relatively early in the design process and detailed information is not yet available.

To estimate air pollutant emissions, data from a 65% design cost estimate for the Sacramento River East Levees (SREL) prepared by GEI Consultants in 2015 and 2016 were used. Material volumes and construction equipment estimates from the 65% cost estimate were used as the basis to estimate material volumes and construction equipment for the proposed seepage and stability contracts levee improvements. The original design cost estimate, material volume estimates, and construction equipment estimates are included in this section. Calculations applying the previous estimates to the new contract configurations on a linear foot of levee basis are also included along with the anticipated allocation of reaches to contracts.

The expected construction schedule is April 15 to October 31. Mobilization is assumed to start as early as April 1. The currently anticipated construction schedule for the Seepage and Stability Contracts is shown in the table below:

Seepage and Stability – Anticipated Schedule for Analysis					
	2019	**2020**	**2021**	**2022**	**2023**
SREL					
Contract 1		X			
Contract 2			X		
Contract 3				X	
Contract 4 (Kleinfelder reaches)					X
Reach D	X				
Magpie Creek				X	

General Construction Assumptions:

- Assume all haul truck are 15 cubic yard end dumps.
- Assume an average of 100 feet of cut-off wall can be completed in one day.
- Additional assumptions are included in the attached calculation sheets.

The estimated quarterly distribution of emissions for the Seepage and Stability contracts is shown below. Quarterly allocations assume construction in April through October only. For berms and wells, the landside construction can slip to quarter 3 (Q3) and quarter 4 (Q4). For cutoff walls, the full construction season is needed and must be completed by October 31.

Berm and Wells Quarterly Distribution of Emissions

Year	Q2	Q3	Q4
2020	25%	37.5%	37.5%
2021	25%	37.5%	37.5%
2022	25%	37.5%	37.5%

Cutoff Wall Quarterly Distribution of Emissions

Year	Q2	Q3	Q4
2020	43%	43%	14%
2021	43%	43%	14%

Included in the following pages:

- 65% Design Cost Estimate
- Calculations supporting the air quality analysis for the 65% Design
- Calculations using the 65% Design as the basis to allocate materials and equipment to the currently anticipated design for Seepage and Stability (excluding Magpie Creek)
- Calculations using the estimated equipment from the 65% Design to estimate equipment for the currently anticipated design for Seepage and Stability

TOTAL (SCHEDULES A+B+C+D+E+F):	**$66,231,900**	**$57,589,500**

CONSTRUCTION SUMMARY AND COST RECONCILIATION:

Work Item	65% Design Estimate	February 2016 Estimate	65% Design - base
Levee Remediation (Schedules A thru E)	$48,557,600	$49,532,000	$42,221,200
Erosion Repair (Schedule F)	$17,674,300	$11,554,000	$15,368,300
Allowance for Penetrations Requiring Remediation Outside Levee Remediation Reaches (not included above)	$2,200,000	$2,200,000	$2,200,000
Total Estimated Cost	**$68,431,900**	**$63,286,000**	**$59,789,500**

Notes:

1 Cost Estimate is based on July 2016 65% design drawings
2 All quantities are in-place quantities.
3 This estimate does not include potential costs to address encroachments, or vegetation removal outside that required for levee remediation
4 Construction contingency is assumed to be included separately in the overall program contingency and is not included here

Notes: Berm and toes drain total not equal to 100% because Reach 2 not part of current contract.
Relief well total equal to 2020 Contract 1 only for reduction of number of wells relative to 2016 data.

SAFCA/USACE
ARCF 2016
General Conformity Analysis

Data from Previous SREL Analysis Allocated to Sacramento S_S Contracts by Year
Data Source - Opinion of Probable Construction Cost - 65% Design

Assumptions:

Assumed truck volume =	15	cubic yards
Assume all fill (Type 1 and Type 2) from WWTP Borrow Site at	13	miles
Assume all stockpile is at undecided location at	30	miles
Assume haul to landfill at	13	miles

Current plan is to take import fill from WWTP (8521 Laguna Station Road, Elk Grove) - this is approximately 13 miles from top of Pocket using Pocket Road.
Export material current plan is to go to Railyards Development in Downtown Sacramento (5-6 miles), however may not be able to dispose here due to poor alignment in construction schedule, so use 30 miles for soil export material.

Assume berms split as follows:

24%	2020	
32%	2021	
32%	2023	

Allocated Cut Off Walls as follows:

Contract 1	2020	34.5%
Contract 2	2021	28.8%
Contract 3	2022	30.1%
Contract 4	2023	6.7%

Assume mobilization split:

2020	30%
2021	20%
2022	20%
2023	30%

times the material volumes estimated in 2016 based on the increase in linear feet of cut-off walls and berms

SREL Material Volume Increase: 1.71 from 25,873 linear feet in 2016 to current length

Relief Well **: 10% **Table 2-2: 42 relief wells total from 2016 (current 4 wells)

Assumed barge volume from Offsite Quarry (Barge)= 909 cubic yards*

* One barge has the capacity of 1,500 tons. Jun 4, 2009. From Bid Schedule, assume 1.65 tons/cy of quarry rock. At density, one barge has the capacity of 909 cubic yards.

Attachment 4

Modeling Assumptions

Mitigation Sites

Supporting Calculations for Material Volumes, Equipment, and Quarterly Allocation of Emissions – Mitigation

The mitigation contract will establish a terrestrial mitigation site of Elderberry. Construction activities will include clearing and grubbing of the full site and installation of plantings, fencing, and irrigation. The initial assumption is for a 50-acre site. Construction is planned for 2023 and will be year around (emissions are assumed evenly distributed). Construction equipment assumptions were supplied by the U.S. Army Corp of Engineers, Sacramento Division based on previous similar projects.

Road Construction Emissions Model
Data Entry Worksheet

Version 8.1.0

Note: Required data input sections have a yellow background.
Optional data input sections have a blue background. Only areas with yellow or blue background can be modified. Program defaults have a white background
The user is required to enter information in cells D10 through D24, E28 through G35, and D38 through D41 for all project type
Please use "Clear Data Input & User Overrides" button first before changing the Project Type or begin a new proje

To begin a new project, click this button to clear data previously entered. This button will only work if you opted not to disable macros when loading this spreadsheet.

SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT

Input Type

Project Name	American River Erosion Contract 1	
Construction Start Year	2020	Enter a Year between 2014 and 2025 (inclusive)
Project Type For 4: Other Linear Project Type, please provide project specific off-road equipment population and vehicle trip data	4	1) New Road Construction : Project to build a roadway from bare ground, which generally requires more site preparation than widening an existing roadway 2) Road Widening : Project to add a new lane to an existing roadway 3) Bridge/Overpass Construction : Project to build an elevated roadway, which generally requires some different equipment than a new roadway, such as a crane 4) Other Linear Project Type: Non-roadway project such as a pipeline, transmission line, or levee constructi
Project Construction Time	3.30	months
Working Days per Month	22.00	days (assume 22 if unknown)
Predominant Soil/Site Type: Enter 1, 2, or 3 (for project within "Sacramento County", follow soil type selection instructions in cells E18 to E20 otherwise see instructions provided in cells J18 to J22)	2	1) Sand Gravel : Use for quaternary deposits (Delta/West County) 2) Weathered Rock-Earth : Use for Laguna formation (Jackson Highway area) or the Ione formation (Scott Road, Rancho Murieta) 3) Blasted Rock : Use for Salt Springs Slate or Copper Hill Volcanics (Folsom South of Highway 50, Rancho Murieta)
Project Length	2.40	miles
Total Project Area	29.00	acres
Maximum Area Disturbed/Day	5.00	acres
Water Trucks Used?	1	1. Yes 2. No

Please note that the soil type instructions provided in cells E18 to E20 are specific to Sacramento County. Maps available from the California Geologic Survey (see weblink below) can be used to determine soil type outside Sacramento County.

http://www.conservation.ca.gov/cgs/information/geologic_mapping/Pages/googlemaps.aspx#regionalseries

Material Hauling Quantity Input

Material Type	Phase	Haul Truck Capacity (yd^3) (assume 20 if unknown)	Import Volume (yd^3/day)	Export Volume (yd^3/day)
Soil	Grubbing/Land Clearing	15.00	0.00	167.00
	Grading/Excavation	15.00	1914.00	2045.00
	Drainage/Utilities/Sub-Grade			
	Paving			
Asphalt	Grubbing/Land Clearing			
	Grading/Excavation			
	Drainage/Utilities/Sub-Grade			
	Paving			

Mitigation Options

On-road Fleet Emissions Mitigation	No Mitigation	Select "2010 and Newer On-road Vehicles Fleet" option when the on-road heavy-duty truck fleet for the project will be limited to vehicles of model year 2010 or newer
Off-road Equipment Emissions Mitigation	No Mitigation	Select "20% NOx and 45% Exhaust PM reduction" option if the project will be required to use a lower emitting off-road construction fleet. The SMAQMD Construction Mitigation Calculator can be used to confirm compliance with this mitigation measure (http://www.airquality.org/ceqa/mitigation.shtml). Select "Tier 4 Equipment" option if some or all off-road equipment used for the project meets CARB Tier 4 Standa

The remaining sections of this sheet contain areas that require modification when 'Other Project Type' is selecte

Note: The program's estimates of construction period phase length can be overridden in cells D50 through D53, and F50 through F5

Construction Periods	User Override of Construction Months	m Calculated Months	User Override of Phase Starting Date	m Default Phase Starting Date
Grubbing/Land Clearing	0.30	0.33	4/5/2022	1/1/2020
Grading/Excavation	3.00	1.49	4/15/2022	1/11/2020
Drainage/Utilities/Sub-Grade	0.00	0.99		4/12/2020
Paving	0.00	0.50		4/12/2020
Totals (Months)		3		

Note: You have entered a non-default starting date. Please provide starting date for all phases, or default values for other phases will be us

Note: Soil Hauling emission default values can be overridden in cells D61 through D64, and F61 through F6

Soil Hauling Emissions User Input	User Override of Miles/Round Trip	Program Estimate of Miles/Round Trip	User Override of Truck Round Trips/Day	Default Values Round Trips/Day	Calculated Daily VMT

PM10 and PM2.5 estimates assume 50% control of fugitive dust from watering and associated dust control measures if a minimum number of water trucks are specified.

Total PM10 emissions shown in column F are the sum of exhaust and fugitive dust emissions shown in columns G and H. Total PM2.5 emissions shown in Column I are the sum of exhaust and fugitive dust emissions shown in columns J and K.

CO2e emissions are estimated by multiplying mass emissions for each GHG by its global warming potential (GWP), 1 , 25 and 298 for CO2, CH4 and N2O, respectively. Total CO2e is then estimated by summing CO2e estimates over all GHGs.

Road Construction Emissions Model
Data Entry Worksheet

Version 8.1.0

Note: Required data input sections have a yellow background.
Optional data input sections have a blue background. Only areas with
yellow or blue background can be modified. Program defaults have a white background
The user is required to enter information in cells D10 through D24, E28 through G35, and D38 through D41 for all project type
Please use "Clear Data Input & User Overrides" button first before changing the Project Type or begin a new proje

To begin a new project, click this button to clear data previously entered. This button will only work if you opted not to disable macros when loading this spreadsheet.

SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT

Input Type

Project Name	American River Erosion Contract 2	
Construction Start Year	2021	Enter a Year between 2014 and 2025 (inclusive)
Project Type For 4: Other Linear Project Type, please provide project specific off-road equipment population and vehicle trip data	4	1) New Road Construction : Project to build a roadway from bare ground, which generally requires more site preparation than widening an existing roadway 2) Road Widening : Project to add a new lane to an existing roadway 3) Bridge/Overpass Construction : Project to build an elevated roadway, which generally requires some different equipment than a new roadway, such as a crane 4) Other Linear Project Type: Non-roadway project such as a pipeline, transmission line, or levee constructi
Project Construction Time	3.30	months
Working Days per Month	22.00	days (assume 22 if unknown)
Predominant Soil/Site Type: Enter 1, 2, or 3 (for project within "Sacramento County", follow soil type selection instructions in cells E18 to E20 otherwise see instructions provided in cells J18 to J22)	2	1) Sand Gravel : Use for quaternary deposits (Delta/West County) 2) Weathered Rock-Earth : Use for Laguna formation (Jackson Highway area) or the Ione formation (Scott Road, Rancho Murieta) 3) Blasted Rock : Use for Salt Springs Slate or Copper Hill Volcanics (Folsom South of Highway 50, Rancho Murieta)
Project Length	6.10	miles
Total Project Area	74.00	acres
Maximum Area Disturbed/Day	5.00	acres
Water Trucks Used?	1	1. Yes 2. No

Please note that the soil type instructions provided in cells E18 to E20 are specific to Sacramento County. Maps available from the California Geologic Survey (see weblink below) can be used to determine soil type outside Sacramento County.

http://www.conservation.ca.gov/cgs/information/geologic_mapping/Pages/googlemaps.aspx#regionalseries

Material Hauling Quantity Input

Material Type	Phase	Haul Truck Capacity (yd^3) (assume 20 if unknown)	Import Volume (yd^3/day)	Export Volume (yd^3/day)
Soil	Grubbing/Land Clearing	15.00	0.00	182.00
	Grading/Excavation	15.00	10642.00	0.00
	Drainage/Utilities/Sub-Grade			
	Paving			
Asphalt	Grubbing/Land Clearing			
	Grading/Excavation			
	Drainage/Utilities/Sub-Grade			
	Paving			

Mitigation Options

On-road Fleet Emissions Mitigation	No Mitigation	Select "2010 and Newer On-road Vehicles Fleet" option when the on-road heavy-duty truck fleet for the project will be limited to vehicles of model year 2010 or newer
Off-road Equipment Emissions Mitigation	No Mitigation	Select "20% NOx and 45% Exhaust PM reduction" option if the project will be required to use a lower emitting off-road construction fleet. The SMAQMD Construction Mitigation Calculator can be used to confirm compliance with this mitigation measure (http://www.airquality.org/ceqa/mitigation.shtml). Select "Tier 4 Equipment" option if some or all off-road equipment used for the project meets CARB Tier 4 Standa

The remaining sections of this sheet contain areas that require modification when 'Other Project Type' is selecte

Note: The program's estimates of construction period phase length can be overridden in cells D50 through D53, and F50 through F5

Construction Periods	User Override of Construction Months	m Calculated Months	User Override of Phase Starting Date	m Default Phase Starting Date
