Civil Engineering
Project Management
Construction Management

**RICH SOLTYSIAK
RCE No. 37233
JUNE 2, 2021**

I. BACKGROUND

The purpose of this preliminary hydrology study is to demonstrate that the proposed Adams Storage and Alliance Propane Facilities Development Plan No. 2020-2231 will not adversely impact existing off-site drainage facilities or adjacent properties.

Development plan 2020-2231 consists of Adams Storage on 5.53 net acres and Alliance Propane on 1.08 net acres over APN 909-060-044. The site is located along Adams Avenue approximately a quarter mile north of Elm Street in the City of Murrieta, California. The site is bordered by vacant property to the north, and Adams Avenue to the west, a riparian riverine reserve adjacent to the future Larchmont Channel and the existing Elm Street General Industrial project to the south, and another riparian riverine reserve setback to existing Business Park to the east.

Existing Drainage

Currently a remnant of Yoder wash drains from north to south through the middle of the site from the southerly border of the existing Pony League Baseball complex at Fig Street to the proposed Larchmont Channel. Yoder Wash has been severed by the Pony League Baseball complex to the north and the Elm Street commercial project to the south. The upstream portion of Yoder Wash has been intercepted by existing drainage improvements at Guava Street.

An interim outlet for the Fig Street Storm Drain outlets onto a Rancho California Water District Well site facility to the east of the existing Pony League Baseball complex at Fig Street. This interim outlet drains to a Rancho California Water District basin that also serves a well site blow off.

Proposed Drainage

In the developed condition, the 1.08 acres of Alliance propane will drain easterly to the riparian riverine north of the proposed Larchmont Channel. In addition the westerly 2.62 acres of Adams Storage will also drain to this location. The 2.91 acre balance of Adams Storage will drain to the easterly riparian riverine setback.

Both Adams Storage and Alliance Propane propose to minimize developed condition runoff by incorporating pervious decomposed granite surfacing throughout. The exception being Murrieta Fire Department access required concrete paving and city required concrete surfacing at trash enclosures.

II. PURPOSE OF STUDY

This hydrology report is intended to support approvals of City of Murrieta Development Plan No. 2020-2231, CUP No. 2020-2032, and TPM 2020-2230.

III. METHODOLOGY

The hydrology report incorporates a CivilCADD/Civil Design Computer Program based on the Riverside County Flood Control and Water Conservation Rational Method Hydrology. This computer program requires input data for rainfall, soil type, type of development, and topographic data for the study area.

Rainfall Data: Standard intensity-duration curve data generated from Plate D-4.1 of the Riverside County Flood Control and Water Conservation Rational Hydrology Manual for the Murrieta area was used.

Soil Type Data: The soil type was obtained from the Hydrologic Soils Group Map within the Riverside County Flood Control and Water Conservation Rational Hydrology Manual. A copy of this map (Plate 1.52) is included within this report. The soil type obtained from the Hydrologic Soils Group Map was determined to be type BC.

Type of Development: The developed condition for both Adams Storage and Alliance Propane proposes to minimize developed condition runoff by incorporating pervious decomposed granite surfacing throughout. The exception being Murrieta Fire Department access required concrete paving and city required concrete surfacing at trash enclosures.

Topographic Data: The Hydrology Map, Exhibit defines the subareas and contains information used as the basis of generating the project hydrology study.

IV. SUMMARY OF RESULTS

The following presents the results of the 10 and 100-yr 1-hr frequency storms analyzed utilizing Rational Method Hydrology for Adams Storage, Alliance Propane, and offsite flows conveyed .

| Storm Event | Adams Storage DMA 1 2.62 Acres | Adams Storage DMA 2 2.91 Acres | Alliance Propane DMA 3 1.08 Acres | Offsite 7.50 Acres |
|--------------------|---|---|--|-------------------------------|
| 10-Year | 1.6 cfs | 1.0 cfs | 0.8 | 10.6 cfs |
| 100-Year | 2.4 cfs | 1.5 cfs | 1.1 cfs | 16.4 cfs |

Storm event (year) = 10.00 Antecedent Moisture Condition = 2

Standard intensity-duration curves data (Plate D-4.1)
For the [Murrieta,Tmc,Rnch CaNorco] area used.
10 year storm 10 minute intensity = 2.360(In/Hr)
10 year storm 60 minute intensity = 0.880(In/Hr)
100 year storm 10 minute intensity = 3.480(In/Hr)
100 year storm 60 minute intensity = 1.300(In/Hr)

Storm event year = 10.0
Calculated rainfall intensity data:
1 hour intensity = 0.880(In/Hr)
Slope of intensity duration curve = 0.5500

Process from Point/Station 100.000 to Point/Station 101.000
**** INITIAL AREA EVALUATION ****
Adams Storage DMA 1

Initial area flow distance = 340.000(Ft.)
Top (of initial area) elevation = 45.700(Ft.)
Bottom (of initial area) elevation = 44.000(Ft.)
Difference in elevation = 1.700(Ft.)
Slope = 0.00500 s(percent)= 0.50
TC = k(0.462)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration = 13.720 min.
Rainfall intensity = 1.981(In/Hr) for a 10.0 year storm
USER INPUT of soil data for subarea
Runoff Coefficient = 0.310
Decimal fraction soil group A = 0.000
Decimal fraction soil group B = 0.500
Decimal fraction soil group C = 0.500
Decimal fraction soil group D = 0.000
RI index for soil(AMC 2) = 0.00
Pervious area fraction = 0.760; Impervious fraction = 0.240
Initial subarea runoff = 1.609(CFS)
Total initial stream area = 2.620(Ac.)
Pervious area fraction = 0.760

Process from Point/Station 200.000 to Point/Station 201.000
**** INITIAL AREA EVALUATION ****
Adams Storage DMA 2

Initial area flow distance = 460.000(Ft.)
Top (of initial area) elevation = 46.400(Ft.)
Bottom (of initial area) elevation = 44.100(Ft.)
Difference in elevation = 2.300(Ft.)
Slope = 0.00500 s(percent)= 0.50
TC = k(0.496)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration = 16.641 min.
Rainfall intensity = 1.782(In/Hr) for a 10.0 year storm
USER INPUT of soil data for subarea
Runoff Coefficient = 0.190
Decimal fraction soil group A = 0.000
Decimal fraction soil group B = 0.500
Decimal fraction soil group C = 0.500
Decimal fraction soil group D = 0.000
RI index for soil(AMC 2) = 0.00
Pervious area fraction = 0.900; Impervious fraction = 0.100
Initial subarea runoff = 0.985(CFS)
Total initial stream area = 2.910(Ac.)
Pervious area fraction = 0.900

Process from Point/Station 300.000 to Point/Station 301.000
**** INITIAL AREA EVALUATION ****
Alliance Propane DMA 1

Initial area flow distance = 370.000(Ft.)
Top (of initial area) elevation = 45.900(Ft.)
