**SUBJECT: NOTICE OF AVAILABILITY OF AN ADDENDUM TO PROGRAM
ENVIRONMENTAL IMPACT REPORT AND PUBLIC COMMENT
PERIOD FOR THE PROPOSED SUNNYVALE WATER POLLUTION
CONTROL PLANT (WPCP) MASTER PLAN**

Project Description. In the 2016 Program Environmental Impact Report (PEIR) for the Sunnyvale Water Pollution Control Plant (WPCP) Master Plan (Master Plan), the City proposed to approve the *Sunnyvale Water Pollution Control Plant Master Plan* for the Donald M. Somers Water Pollution Control Plant. The approved Master Plan serves as a long-term guide for upgrading and replacing the WPCP's facilities and operations to ensure that the WPCP can meet changing regulations, treat existing and projected wastewater flows reliably and cost-effectively, and increase recycled water production.

Following certification of the Master Plan PEIR and approval of the Master Plan, the City proceeded with design of the Sunnyvale WPCP Site Preparation and Existing Plant Rehabilitation Project (the Project). This Addendum to the PEIR provides project-level environmental review of the Project. Site Preparation activities would complete early demolition and pipeline relocation work to prepare the WPCP for upcoming construction projects, and would include demolition of existing structures, yard piping and utility demolition, construction of new sanitary sewers, storm drain relocations, dry utility relocations in conflict with future facilities, construction of a 60-inch secondary effluent pipeline, and construction of a portion of the perimeter flood wall. The Site Preparation activities would also include construction of temporary administration and

December 18, 2020

maintenance facilities for staff use during upcoming construction projects. The Rehabilitation activities would rehabilitate the WPCP's existing secondary, tertiary, and disinfection facilities to provide reliable treatment through the Master Plan planning period. The Rehabilitation activities also include integration of the existing Plant control system and perimeter wall construction.

Project Location. The Master Plan would be implemented at and near the Sunnyvale WPCP, 1444 Borregas Avenue, Sunnyvale CA.

Environmental Effects. The proposed project will have potentially significant environmental effects regarding Transportation, Noise & Vibration, Air Quality, Biological Resources, Geology and Soils, Hydrology, Water Quality, Hazards and Hazardous Materials, Cultural Resources, Aesthetics, and Growth Inducement. The California Environmental Quality Act (CEQA) requires this notice to disclose whether any listed toxic sites are present at the project location pursuant to 14 Cal Code Regs § 15087(c)(6). The following two facilities were identified within the Master Plan area adjacent to Carl Road:

- City of Sunnyvale, BOP/Recycling Center, 164 Carl Road
- City of Sunnyvale Landfill, South of 164 Carl Road.

Public Review. The 30-day public review period for this addendum to the PEIR begins on 12/21/2020 and ends on 1/20/2021. Written comments must be received at the Public Works Department, or via email at pubworks@sunnyvale.ca.gov, by **4:00 p.m.** on 1/20/2021 to be addressed as part of the formal EIR Addendum review process.

The addendum to the EIR is available for review online at the City of Sunnyvale's website, https://www.sunnyvalecleanwater.com/s/RehabSitePrep_CEQAmemo.pdf.

Documents referenced in the addendum to the EIR are available for review at the offices of the City of Sunnyvale, identified above.

Comments and questions should be referred to Allison Boyer in the Public Works Department, at (408) 730-7516, via e-mail: ABoyer@sunnyvale.ca.gov, or by regular mail to:
